

Crop-Livestock

Interaction

in Sub-Saharan Africa

JOHN MCINTIRE,

DANIEL BOURZAT,

AND

PRABHU PINGALI

The World Bank
Washington, D.C.

Contents

Acknowledgments	xi
Introduction	xiii
Chapter 1	
<i>Problems of Integrating Crops and Livestock in Sub-Saharan Africa</i>	1
Analytic Issues	3
Resource Competition	3
Mixed Farming as a Model	4
Benefits of Further Integration	5
Methodology	6
Definitions	6
Chapter 2	
<i>Agricultural Environments in Sub-Saharan Africa</i>	11
Humid Zone	12
Subhumid Zone	13
Semi-Arid Zone	15
Highland Zone	20
Summary: The Effect of Agroclimate on Land Allocation	21
Chapter 3	
<i>Evolution of Crop-Livestock Interactions</i>	23
Low Population Density Restricts Interactions	24
Interactions First Occur Through Markets and Contracts	25
Product Interactions Between Specialized Farmers and Herders	29
Investment Interactions Between Specialized Farmers and Herders	29
Interactions Increase With Farming Intensity	33
Effects of Interactions on Crop-Livestock Competition	35
Effect of Rising Population Density on Land Allocation Within Agroclimates	36

The Transition to Crop-Livestock Integration	38
Crop-Livestock Interactions and the Competition for Land	41
Return to Specialized Crop and Animal Production	44

Chapter 4

<i>The Role of Animal Traction</i>	47
Is Animal Traction Central to Crop-Livestock Integration?	47
Constraints to Mechanization	48
Farming Intensity and Market Access	48
Agroclimate	52
Feed Competition	57
Rental Markets as Substitutes for Ownership	59
Inadequate Research	60
Interactions Between Mechanization and Other Production Techniques	62
Subhumid Zone	62
Semi-Arid Zone	63
Highland Zone	65
Effects of Animal Traction on Crop-Livestock Competition	65
Summary	70
Animal Traction Should Not Be an Organizing Theme for Projects	70
Introducing Animal Traction	70
Improving Animal Traction	71

Chapter 5

<i>The Pattern of Soil Fertility Maintenance</i>	73
Productivity Effects of Organic Inputs	74
Crop Yields	74
Soil Quality	79
Demand for Soil Fertility Inputs in Different Agroclimates	82
Humid Sites	82
Subhumid Sites	82
Semi-Arid Sites	83
Highland Sites	83
Effects of Migration Within Two Countries	85
Relieving Constraints to Better Soil Fertility Management by Crop-Livestock Integration	86
Biased Extension Recommendations	86
Transport and Labor Costs	87
Low Fertilizer Applications	89
Markets and Contracts as Substitutes for Mixed Farming	91
Land Competition Between Crops and Livestock	94

Crop-Livestock Integration Is Insufficient to Resolve the Soil Fertility Problem 95

Chapter 6

Animal-Fodder Interactions 103

Sown Forage Production Is Rare 104

Resource Competition and Seasonality in Fodder Production 104

Fodder Production Costs 108

Field Evidence About Fodder Interactions 109

Alternative Fodder Systems 117

Alley Farming 117

Crop Residue Management 118

Reallocating Crop Residue Between Crops and Animals 123

Summary 130

Chapter 7

Fattening Animals on the Farm 135

Economics of Fattening 136

Theoretical Rate of Return 136

Estimates of Rates of Return 138

Field Evidence About Fattening Practices 143

Labor 148

Barriers to More Intensive On-Farm Livestock Production 150

Feed Response 150

Price and Supply of Feed 155

Price Policies 158

Species, Breed, and Scale 159

Veterinary and Extension Services 162

Conclusions 162

Chapter 8

Conclusions and Recommendations 165

Competition and Complementarity in Crop-Livestock Interactions 165

Land Competition 165

Principal Responses to Land Competition 167

Labor Availability 169

Transitions to Mixed Farming and Specialization 170

Recommendations to Promote Crop-Livestock Interactions 172

Relative Prices 172

Land Management 176

Credit 177

Priorities by Agroclimate 179

Humid Zone 179

Subhumid Zone	183
Semi-Arid Zone	183
Highland Zone	185
Research and Extension Recommendations	186
Animal Traction	186
Soil Fertility	192
Fodder Resources	195
Fattening Animals on the Farm	197
Final Remarks	198
Appendix	201
References	207
Additional Reading	223
Index	236

Figures

1-1.	Locations Visited by Authors	7
3-1.	Livestock Production Costs as a Function of Farming Intensity	28
3-2.	Relative Fodder Supply by Season	37
3-3.	Feasible Stocking Rates by Season and Population	43
3-4.	Feasible Stocking Rates by Agroclimate and Population Density	44
4-1.	Feasible Stocking Rates With and Without Animal Traction at Varying Population Densities	71
5-1.	Pearl Millet Nitrogen Balances at Minimum Stocking Rate	98
5-2.	Pearl Millet Nitrogen Balances at Average Stocking Rate	99
6-1.	Effects of Grain Price and Labor Cost on Profitable Crop Residue Use	129

Tables

1-1.	Field Site Characteristics	8
2-1.	Two Agroclimatic Classifications of Sub-Saharan Africa	12
2-2.	Some Characteristics of the Main Environments	14
2-3.	Agricultural Characteristics of the Main Environments	16
2-4.	Field Site Characteristics	18
3-1.	Predicted Evolution of Crop-Livestock Interactions at Different Land Scarcities	26

3-2.	Summary of Earlier Studies of Crop-Livestock Systems by Population Density	30
3-3.	Principal Interactions at the Field Sites, by Environment	32
3-4.	Principal Interactions at the Field Sites, by Population Density	34
3-5.	Cattle Herd Mobility at Different Population Densities	39
3-6.	Modern Technologies and Specialization at Field Sites, by Environment	45
4-1.	Number of Sites Satisfying Conditions for Mechanization, by Environment	50
4-2.	Number of Sites Using Different Types of Mechanization, by Environment	51
4-3.	Mechanization at the Subhumid Sites	54
4-4.	Number of Sites With Access to Animal Traction, by Environment	60
4-5.	Contrasting Crop-Livestock Interactions at Semi-Arid Sites	64
4-6.	Cropping Changes Following Resettlement within Rwanda and Madagascar	66
5-1.	Summary of Eight Soil Fertility Experiments in Sub-Saharan Africa	76
5-2.	Results of Manuring Experiments at Five Sites	78
5-3.	Results of Mulching Experiments at Five Sites	79
5-4.	Effects of Organic Materials on Soil Quality	81
5-5.	Soil Fertility Practices Observed at Field Sites, by Environment	84
5-6.	Organic Fertilizer Applied in Burkina Faso	88
5-7.	Experimental Fertilizer Responses from Selected Studies	92
5-8.	Manure Exchanges Observed at Field Sites, by Environment	94
5-9.	Theoretical Relationship Between Population Density and Stocking Rate for 100 Hectares in Burkina Faso	96
6-1.	Cropping Systems and Fodder Supply Systems	105
6-2.	Relative Costs (Percent) of Forage Energy and Protein in Selected Countries	110
6-3.	Cattle Fodder Systems at Field Sites, by Environment	113
6-4.	Uses of Crop Residue at Field Sites, by Environment	114
6-5.	Restrictions on Crop Residue Use at Field Sites, by Environment	115
6-6.	Previous Research on Crop Residue	120
6-7.	Model of Crop Residue Allocation	126
6-8.	Optimal Pearl Millet Residue Strategies in Semi-Arid Niger	130
7-1.	Field Studies of Smallholder Cattle Fattening	140
7-2.	Estimates of Returns to Animal Production	142
7-3.	Summary of Animal Fattening at Field Sites, by Environment	144

7-4.	Observations of Use of Modern Inputs in Animal Production at Field Sites, by Environment	146
7-5.	Summary of Selected Cattle Production Studies	152
7-6.	Summary of Selected Studies of Small Ruminant Production	154
7-7.	Feed and Livestock Price Series for Selected Countries	156
7-8.	Variables and Differences for Cattle or Small Ruminant Production	160
7-9.	Variables and Differences for Feedlots or Smallholder Cattle Production	161
8-1.	Policy Recommendations to Promote Mixed Farming and Specialized Production	174
8-2.	Synthesis of Livestock Project Priorities by Agroclimate	180
8-3.	Synthesis of Research and Extension Recommendations by Theme	188
A-1.	Parameters for Land Competition Model	202
A-2.	Crop Production and Manure Parameters	203
