CHAPTER 1. Genomic *In Situ* Hybridization

for Whole Chromosome and Genome Analysis

K. ANAMTHAWAT-JÖNSSON, J. S. HESLOP-HARRISON,
and T. SCHWARZACHER 1

1.1	Introduction	1
1.2	Uses of Genomic <i>In Situ</i> Hybridization	2
1.2.1	Genome Organization of Different Sequence Classes ...	2
1.2.2	Species Identity, Differentiation and Relatedness	3
1.2.3	Genomic Stability	5
1.2.4	Spatial Organization of Chromosomes	6
1.2.5	Chromosome Introgression and Rearrangements	7
1.2.6	Chromosome Behaviour and Meiosis	8
1.3	The Principle of Genomic <i>In Situ</i> Hybridization	9
1.3.1	Genomic Probing	9
1.3.2	Blocking and Competitive Hybridization	10
1.4	Materials and Chemicals	12
1.4.1	Buffers and Reagents	12
1.4.2	Chemicals	13
1.4.3	Equipment	13
1.5	Genomic <i>In Situ</i> Hybridization: Protocol	14
1.5.1	Chromosome Preparations	14
1.5.2	Probe DNA	14
1.5.3	Blocking DNA	15
1.5.4	<i>In Situ</i> Hybridization Procedure	15
1.6	Troubleshooting	18

CHAPTER 2. Fluorescence *In Situ* Hybridization:

Applications in Gene Mapping and Clinical Diagnostics

G. A. EVANS and L. SELLERI 25

2.1	Introduction	25
2.2	Materials and Chemicals	28
2.2.1	Buffers and Reagents	28
2.2.2	Chemicals	30
2.2.3	Equipment	30
2.3	FISH Using Single Copy Cosmid Probes	31

2.3.1	Preparation of Metaphase Chromosomes	31
2.3.2	Preparation of Metaphase Chromosome Slides for Hybridization	31
2.3.3	Preparation and Labelling of Probes	32
2.3.4	Hybridization of Cosmid Probes	32
2.4	Multicolor FISH Using Cosmid Probes	33
2.4.1	Labelling of Probes and Hybridization Reactions	33
2.5	Interphase FISH Analysis	34
2.5.1	Preparation of Interphase Nuclear Slides from Short Term Cultures	35
2.5.2	Direct Preparation of Interphase Spreads	35
2.5.3	FISH	35
2.6	FISH Analysis Using YAC Clones	36
2.6.1	Preparation of Metaphase Chromosomes	36
2.6.2	Isolation of YAC DNA	36
2.6.3	Biotin Labelling of YACs	37
2.6.4	FISH	37
2.6.5	Microscopy	38
2.7	Direct Visual <i>In Situ</i> Hybridization (DIRVISH)	38
2.7.1	Preparation of Stretched DNA	39
2.7.2	FISH Hybridization	39
2.7.3	Detection and Analysis	39
2.7.4	Microscopy	40
2.8	Troubleshooting	40

CHAPTER 3. Detection of Nucleic Acids (DNA and RNA) *In Situ* by Single and Cyclic Primed *In Situ* Labelling (PRINS): Two Alternatives to Traditional *In Situ* Hybridization Methods

J. HINDKJÆR, C. TERKELSEN, S. KØLVRAA, J. KOCH, and L. BOLUND	45
3.1 Introduction	45
3.2 Materials and Chemicals	47
3.2.1 Buffers and Reagents	47
3.2.2 Chemicals	47
3.2.3 Equipment	48
3.3 DNA-PRINS with Oligonucleotide Probes	48
3.4 PRINS with <i>Dde</i> I Digested Cloned Probes	50
3.4.1 Generation of Primers from Cloned Alpha Satellite DNA	52
3.4.2 PRINS Reaction	52
3.5 Multicolour-PRINS	53
3.6 PRINS-painting	54
3.7 PRINS-PCR and Repeated-PRINS of DNA	55
3.7.1 Chromosome Spreads	56
3.7.2 Pretreatment of Chromosome Spreads	57
3.7.3 Labelling Reaction	57
3.8 PRINS-PCR of mRNA	58
3.9 Visualization of Hapten-Labelled Nucleotides	61

3.9.1	Standard Slides	61
3.9.1.1	Biotin	61
3.9.1.2	Digoxigenin	62
3.9.2	Micro-slides	63
3.9.2.1	Detection of Labelled DNA	63
3.9.2.2	Detection of Labelled RNA	63
3.9.2.3	Alkaline Phosphatase Visualization	63
3.9.2.4	Fluorescent Visualization	64
3.10	Troubleshooting	64

CHAPTER 4. Fluorescence Immunophenotyping and Interphase Cytogenetics as a Tool for Investigation of Neoplasms (FICTION): Combined *In Situ* Hybridization and Fluorescence Immunophenotyping

K. WEBER-MATTHIESEN	67	
4.1	Introduction	67
4.2	Application of the FICTION Method	69
4.2.1	Defining the Cell Type of Chromosomally Aberrant Clones	69
4.2.2	Defining the Differentiation State of Chromosomally Aberrant Cells	70
4.2.3	Interpretation of Ambiguous Cytogenetic Findings	70
4.2.4	An Aid to Diagnosis	71
4.2.5	Overcoming the Detection Limit of FISH	72
4.3	Materials and Chemicals	73
4.3.1	Buffers and Reagents	73
4.3.2	Chemicals	74
4.3.3	Equipment	74
4.4	Preparation of Slides for FICTION	75
4.5	FICTION-Protocol 1: Immunophenotyping Using One Antigen Plus <i>In Situ</i> Hybridization of Two Centromeric-Probes	76
4.5.1	Control Studies: Specificity of Immunophenotyping	78
4.6	FICTION-Protocol 2: Immunophenotyping (Two Different Antigens) Plus <i>In Situ</i> Hybridization (One Centromeric Probe)	80
4.6.1	Control Studies: Specificity of the Immunophenotyping	83
4.7	FICTION-Protocol 3: Detection of Structural Chromosome Aberrations Within Immunophenotyped Cells	84
4.8	Evaluation of Results	85
4.9	Documentation of FICTION-Results	88
4.10	Troubleshooting	88

CHAPTER 5. *In Situ* Hybridization to Embryo Whole Mounts and Tissue Sections: mRNA Detection and Application to Developmental Studies

T. JOWETT, M. MANCERA, A. AMORES, and Y. YAN 91

5.1	Introduction	91
5.2	Materials and Chemicals	92
5.2.1	Buffers and Reagents	92
5.2.2	Chemicals	95
5.2.3	Equipment	95
5.3	General Procedures	96
5.3.1	RNase-free Treatments	96
5.3.2	RNA Probe Synthesis	96
5.4	Whole Mount <i>In Situ</i> Hybridization	97
5.4.1	Fixation and Pretreatments	97
5.4.2	Hybridization	100
5.4.3	Post-Hybridization Washes	101
5.4.4	Incubation with Antibody	101
5.4.5	Preabsorption of Antibodies	102
5.4.6	Post-Antibody Washes and Histochemistry	103
5.4.7	Performing Experiments with Many Different Batches of Embryos or a Large Number of Probes	104
5.4.8	Embedding and Sectioning Whole Mount Embryos	105
5.5	Double-Labeling Whole Mount <i>In Situ</i> Hybridization	105
5.5.1	Hybridization	106
5.5.2	Preabsorption of the Antibodies	106
5.5.3	Alkaline Phosphatase/horseradish Peroxidase Staining (Blue/Brown)	106
5.5.4	Sequential Alkaline Phosphatase Staining (Blue/Red)	110
5.5.5	Special Considerations	112
5.6	<i>In Situ</i> Hybridization to Tissue Sections	113
5.6.1	Preparing TESPA-Treated Slides	113
5.6.2	Fixation and Embedding Embryos or Tissue	114
5.6.3	Cutting Paraffin Sections	115
5.6.4	Pretreatment and Hybridization of Sections	116
5.6.5	Washing of Sections and Immunodetection of Probe	118
5.7	Troubleshooting	120

CHAPTER 6. *In Situ* Hybridization at the Electron Microscopic Level

F. WACHTLER, C. SCHÖFER, and K. WEIPOLTSHAMMER 123

6.1	Introduction	123
6.2	Materials and Chemicals	124
6.2.1	Buffers and Reagents	124
6.2.2	Chemicals	125
6.2.3	Equipment	125
6.3	Labelling Nucleic Acids for <i>In Situ</i> Hybridization	126

6.4	Preparing Tissue for Electron Microscopic	
	<i>In Situ</i> Hybridization	126
6.4.1	Fixation	127
6.4.2	Embedding, Cutting and Mounting	128
6.4.3	Troubleshooting	129
6.5	<i>In Situ</i> Hybridization at the EM Level	
	for DNA Sequences	130
6.6	<i>In Situ</i> Hybridization at the EM Level	
	for RNA Sequences	133
6.7	Detection of Hybrids	134
6.7.1	Gold Labelled Antibodies	135
6.7.2	Troubleshooting	136
6.7.3	The Use of the Peroxidase Reaction to Detect Hybrids	
	at the EM Level	138
6.7.4	Troubleshooting	139
6.7.5	Controls	140
6.8	Evaluation and Interpretation of Results	144

Appendix I

Labelling DNA Probes for <i>In Situ</i> Hybridization	147
---	-----

Appendix II

Quantification of Efficiency of Incorporation	
of Labelled Nucleotides	155

Glossary	159
