Introduction

Part A Socialism, Capitalism and Innovation

- 1 Economic Factors in the Democratisation of Socialism and the Socialisation of Capitalism** 1

Brus's theory. Interpretation and critical remarks. Two characteristic features of Marxian theory. Variation in the rate of economic growth and the possibility of innovation limits to growth. Stages of economic growth and the system of values. Pursuit of the Frontier and the paradox of 'Negative Correlation'. On the economic requirements for socialism and democracy.

- 2 Political System and Economic Efficiency: The East European Context** *Reply by Włodzimierz Brus* 24

Democratisation of socialism: the challenge and the answer. Democratisation of socialism: the insiders' view. 'Kadarism': an alternative?

- 3 The Incompatibility of Socialism and Rapid Innovation** 42

Introduction. R&D and innovation activity in centrally planned economies: five characteristics. The Hungarian New Economic Mechanism and the five innovation characteristics. The influence of West-East technology transfer. Relationships between innovation, competition and socialism. The Soviet growth strategy and the recent slowdown. Summary.

- 4 Innovation Activity in the Yugoslav Economy** *with Slobodan Ostojic* 62

Introduction. R&D and innovation activity in Yugoslavia. Systemic factors in the Yugoslav innovation activity. Concluding Remarks.

- 5 Kornai's Soft Budget Constraint and the Shortage Phenomenon: A Criticism and Restatement 73

Introduction. Hard, almost-hard and soft budget constraints: Kornai's definitions. Softness, flexibility and ineffectiveness of the budget constraint. Investment budget flexibility and shortages in CPEs. Price flexibility versus budget flexibility, and the shortage phenomenon. Limited softness of the government budget. Concluding remarks.

Part B Industrialisation, Growth and Growth Slowdown

- 6 Industrialisation and the Rate of Growth: Eastern Europe 1955–75 93

The hypothesis of manufacturing as the engine of growth: the arguments. Tests and interpretations. Variation in productivity growth: economies of scale versus diffusional effect. Conclusion.

- 7 Soviet Post-war Industrial Growth, Capital–Labour Substitution and Technical Changes: A Re-examination 103

Presentation of basic data and their preliminary interpretation. Preliminary test with a production function: period 1951–73. Estimation of three 'extra' growth effects. The long-run trend and the post-war recovery trend. Variable technical change versus elasticity of substitution: a further test. Cobb-Douglas function with variable technical changes: the final specification. Summary. Data appendix.

- 8 Slowdown in Soviet Industrial Growth: 1947–75 Reconsidered 138

Basic data and their preliminary interpretation. Fitting a CES production function with a variable rate of technical change. Four hypotheses: comparison of the explanatory power. The economics of slowdown.

Afterword 150

- 9 Poland's Industrialisation 154

Introduction. Extent and changing pace of industrialisation, 1860–1980. Sources of economic growth in the post-1945 period. Influences of the systemic factor. Effects on growth and consumption. Industrialisation and qualitative changes.

Industrialisation and social change. Limits to further economic development. Data appendix.

- 10 Growth and the Import of Technology: Poland 1971–80 195
Introduction. Two phases of the strategy: the economic background. On the concepts of subvintage and the diffusional effect. Data, assumptions and the estimation results. Some general remarks on the strategy of import-led growth as a policy alternative for Eastern Europe. Appendix 1: the data. Appendix 2: the model and the estimation procedure.
- 11 Do New Factories Embody Best Practice Technology?—New Evidence 219
- Part C Crisis and Reform**
- 12 Specific and Systemic Causes of the Polish Crisis, 1980–82 227
Ignorance and reserves as factors in the cyclical pattern of economic growth. The activation of reserves in Poland in the early 1970s: a case of misinterpretation. The anatomy of the Polish crisis: an outline. Underutilization of industry's capital stock and labour force. Energy as a macroeconomic constraint. Policy mistakes and potential reserves in the agricultural sector. Trends in dollar exports and imports and debt prospects. Systemic factors in the Polish crisis. Events in 1981 and 1982: the remarkable interlock between politics and economics. Concluding remarks.
- 13 East–West Trade and the Polish Experience, 1970–82 251
Systemic factors versus policies in East–West trade. Net benefits of Gierek's policy, 1971–82. Can East–West trade induce reforms in Eastern Europe? Polish trade policy towards the West and Western towards Poland. Appendix: the relative and absolute solvency conditions under balanced growth, and the tilting effect.
- 14 The Reformed Polish Economic System 1982–83 with Jacek Rostowski 271
Introduction. Major principles and the transitional period. The 3-S principle in practice. Price formation, interest rates,

exchange rates and wages. The system of taxation under the RES. Similarity of direct taxes under the RES and incentive formulae under the WOG system. The financing of investment under the RES. Can the RES reduce the material intensity of the Polish economy? Can the enterprise profits tax and the FAZ control inflation? Can the RES stimulate net exports? Institutional reform under the RES. Conclusion.
