Economic Theories and their Relational Structures

A Model-Theoretic Characterization

Erwin Klein Professor of Economics Dalhousie University Halifax Nova Scotia, Canada

Contents

Preface and Acknowledgements			xii
Pa	rt I 🛛	Introduction	1
1	Overview		3
	1.1	Motivation: on some methodological features of	
		economics	4
	1.2	Overall goal	5
	1.3	Method	5
	1.4	Subject matter and scope	6
	1.5	A taxonomy of economic theories	7
	1.6	Characterization of empirical economic theories	8
	1.7	On the methodological foundations of	
		non-intendedly empirical economic theories	9
	1.8	Organization of the book	10
	1.9	Notes and remarks	11
2	Model-Theoretic Toolkit		12
	2.1	Language	12
	2.2	Semi-formalized languages: axiomatic theories	13
	2.3	Structures	14
	2.4	Models	14
	2.5	Structural and proper axioms	15
	2.6	Intended and non-intended structures and models	16
	2.7	An economic example	16
	2.8	Notes and remarks	18
3	Theoretical Economics		20
	3:1	Economic theories and models	20
	3.2	An example: theory of consumer choice	22
	3.3	Notes and remarks	25

Pa	rt II	A Taxonomy of Economic Theories	27
4	A Tax	conomy of Economic Theories Based upon Intended	
	Episte	mological Status and Pragmatic Function	29
	4.1	The intended models of a theory	31
	4.2	Intendedly empirical theories	32
	4.3	Non-intendedly empirical theories	35
	4.4	Intended and actual epistemological status	36
	4.5	Descriptive theories	37
	4.6	Operative theories	38
	4.7	Value judgements and value axioms: their place	
		and form	40
	4.8	Notes and remarks	44
5	A Ta	conomy of Economic Theories: Application	46
	5.1	Intendedly empirical descriptive theories	46
	5.2	Non-intendedly empirical descriptive theories	47
	5.3	Intendedly empirical operative theories	48
	5.4	Non-intendedly empirical operative theories	49
	5.5	Notes and remarks	50
Pa	rt III	Empirical Economic Theories	53
6	Gener	al Characterization	55
	6.1	Empirical structures and empirical theories	55
	6.2	Analytic schemes I: hierarchic system of	
		theories and models	56
	6.2.1	Epistemological levels and logical types	58
	6.2.2	Logical types and cores of empirical claims	61
	6.3	Analytic schemes II: level-specific features of	
		theories and models	64
	6.3.1	The features of the axiom base	64
	6.3.2	The cognitive goals and scope of the theory	66
	6.3.3	The ontological and/or epistemological assumptions	
		and hypotheses	67
	6.3.4	The characterization of observables: place and	
		specification	68
	6.3.5	The overall linguistic features	69
	6.3.6	• The characteristics of structures and models	70

		Contents	ix
	6.3.7	Methodological features	71
	6.4	Analytic schemes III: the general case	72
	6.5	Models and projections	73
	6.6	Notes and remarks	74
7	Representational Theories and Theoretical Systems (I): Basic or General Theory and General-Class Theory		76
	7.1	Basic or general theory: language and models	76
	7.2	A basic or general theory: consumer choice in R^{l}	78
	7.3	General-class theories: language and models	84
	7.4	A general-class theory: stochastic theory	
		of transitive consumer demand	85
	7.5	Notes and remarks	93
8	Repre	sentational Theories and Theoretical Systems (II):	
	Specia	al-Class Theory and Data-Specific Theory	95
	8.1	Special-class theories: language and models	95
	8.2	A special-class theory: the direct translog demand	
		system	97
	8.3	Data-specific theory: language and model	108
	8.4	A data-specific theory: an applied direct translog demand system	110
	85	Inter-level theoretical links	121
	8.6	Notes and remarks	124
9	Pheno	menological Theories and Theoretical Systems (1):	
-	Gener	ic and Data-Specific Theory	126
	91	Generic theory: language and models	127
	9.1	First example of a generic theory	127
		linear input-output analysis	128
	9.3	Second example of generic theory: a theory of	120
		cyclical growth	134
	9.4	Data-specific theory: language and model	140
	9.5	First example of a data-specific theory:	
		an applied input-output system	141
	9.6	Second example of a data-specific theory:	- • •
		an applied theory of cyclical growth	145
	9.7	Notes and remarks	150

Contents

10	Phenomenological Theories and Theoretical Systems (II): Data-Contingent Theory		153
	10.1 10.2	Data-contingent theory: language and model Example one: a macroeconometric structural	153
	10.3	equation system Example two: a macroeconometric vector	156
		autoregressive system	162
	10.4	Notes and remarks	168
Pai	t IV	Non-Intendedly Empirical Economic Theories	171
11	Meth On th	odology of Non-Experimental Economic Research (I): he Foundations of Non-Intendedly Empirical Theories	173
	11.1	Economic experiment, experiment simulation and simulation experiment	174
	11.2	Economics and the scope of the experimental method	178
	11.3	Methodological foundations of non-intendedly	
		empirical theories	182
	11.4	Notes and remarks	184
12	Meth Cogr	odology of Non-Experimental Economic Research (II): hitive Functions of Non-Intendedly Empirical Theories	186
	12.1	Non-intendedly empirical theories as analytic experiment simulations	186
	12.2	Objectives of and approaches to analytic	
		experiment simulations	188
	12.3	The nucleus of a research programme:	
		Arrow-Debreu theory and models	189
	12.4	First kind of analytic experiment simulation:	104
	~	defining and redefining a structure	194
1	2.4.1	(many' agents	104
		many agents The core of a competitive economy	105
		The core of a competitive economy Edgeworth's conjecture	195
		The rate of convergence of the core	196
1	242	Economies with 'many' commodities	196
1	2.4.3	The determinacy of equilibria	197
1	2.4.4	Equilibrium with alternative agents' characteristics	198
