CONTENTS

PREFACE	ix
EXECUTIVE SUMMARY	x
1 THE ANTARCTIC ENVIRONMENT AND THE GLOBAL SYSTEM	1
1.1 THE PHYSICAL SETTING	1
1.2 THE ANTARCTIC CRYOSPHERE	4
1.3 THE ROLE OF THE ANTARCTIC IN THE GLOBAL CLIMATE SYSTEM	10
1.4 OBSERVATIONS FOR STUDIES OF ENVIRONMENTAL CHANGE IN THE ANTARCTIC	17
1.5 THE CLIMATE OF THE ANTARCTIC AND ITS VARIABILITY	18
1.6 BIOTA OF THE ANTARCTIC	21
1.6.1 Terrestrial	23
1.6.2 Marine	26
2 OBSERVATIONS, DATA ACCURACY AND TOOLS	33
2.1 OBSERVATIONS, DATA ACCURACY AND TOOLS	33
2.1.1 Introduction	33
2.1.2 Meteorological and ozone observing in the Antarctic	34
2.1.3 In-situ ocean observations	47
2.1.4 Sea ice observations	60
2.1.5 Observations of the ice sheet and permafrost	64
2.1.6 Sea level	79
2.1.7 Marine biology	82
2.1.8 Terrestrial biology	85
2.1.9 Models	88
2.2 FUTURE DEVELOPMENTS AND RESEARCH NEEDS	113
3 ANTARCTIC CLIMATE AND ENVIRONMENT HISTORY IN THE PRE- INSTRUMENTAL PERIOD	115
3.1 INTRODUCTION	115
3.2 DEEP TIME	118
3.2.1 The Greenhouse world: from Gondwana breakup to 34 million years.....	119
3.2.2 Into the Icehouse world: the last 34 million years	122
3.3 THE LAST MILLION YEARS.....	126
3.3.1 Glacial interglacial cycles: the ice core record.....	126
3.3.2 The transition to Holocene interglacial conditions: the ice core record.....	133
3.3.3 Deglaciation of the continental shelf, coastal margin and continental interior.....	138
3.3.4 Antarctic deglaciation and its impact on global sea level.....	140
3.3.5 Sea ice and climate	144
3.4 THE HOLOCENE	147
3.4.1 Holocene climate change: regional to hemispheric perspectives	147
3.4.2 Changes in sea ice extent through the Holocene.....	155
3.4.3 Regional patterns of Holocene climate change in Antarctica.....	159
3.5 BIOLOGICAL RESPONSES TO CLIMATE CHANGE	170
3.5.1 The terrestrial environment	170
3.5.2 The marine environment.....	173

3.4.3	Regional patterns of Holocene climate change in Antarctica.....	159
3.6	CONCLUDING REMARKS	180
4	THE INSTRUMENTAL PERIOD	183
4.1	INTRODUCTION	183
4.2	CHANGES OF ATMOSPHERIC CIRCULATION.....	184
4.2.1	Modes of variability	184
4.2.2	Depression tracks	191
4.2.3	Teleconnections	193
4.3	TEMPERATURE	195
4.3.1	Surface temperature	195
4.3.2	Upper air temperature changes.....	202
4.3.3	Attribution	204
4.4	CHANGES IN ANTARCTIC SNOWFALL OVER THE PAST 50 YEARS.....	204
4.4.1	General spatial and temporal characteristics of Antarctic snowfall.....	204
4.4.2	Long-term Antarctic snowfall accumulation estimates.....	205
4.4.3	Recent trends in Antarctic snowfall.....	206
4.5	ATMOSPHERIC CHEMISTRY.....	208
4.5.1	Antarctic stratospheric ozone in the instrumental period.....	208
4.5.2	Antarctic tropospheric chemistry.....	211
4.5.3	Aerosol, clouds and radiation.....	216
4.6	THE SOUTHERN OCEAN.....	220
4.6.1	Introduction.....	220
4.6.2	Australian sector.....	222
4.6.3	The Amundsen/Bellingshausen Seas.....	225
4.6.4	Variability and change in Ross Sea shelf waters.....	226
4.6.5	The Weddell Sea sector.....	229
4.6.6	Small-scale processes in the Southern Ocean.....	232
4.6.7	Dynamics of the circulation and water masses of the ACC and the polar gyres from model results.....	235
4.7	ANTARCTIC SEA ICE COVER DURING THE INSTRUMENTAL PERIOD	236
4.7.1	Introduction.....	236
4.7.2	Sea ice cover in the pre-satellite era.....	236
4.7.3	Variability and trends in sea ice using satellite data.....	238
4.8	THE ICE SHEET AND PERMAFROST	243
4.8.1	Introduction.....	243
4.8.2	The Antarctic Peninsula.....	245
4.8.3	West Antarctica.....	252
4.8.4	East Antarctica.....	256
4.8.5	Calving.....	257
4.8.6	Sub-glacial water movement.....	257
4.8.7	Other changes in the ice sheet.....	257
4.8.8	Attribution of changes to the ice sheet.....	257
4.8.9	Conclusions regarding the ice sheet.....	260
4.8.10	Changes in Antarctic permafrost and active layer over the last 50 years.....	261
4.9	LONG TERM SEA LEVEL CHANGE	262
4.10	MARINE BIOLOGY	263
4.10.1	The open ocean system.....	263
4.10.2	Sea ice ecosystems.....	270
4.10.3	ENSO links and teleconnections to vertebrate life histories and population.....	270
4.10.4	Invertebrate physiology.....	272
4.10.5	Seasonality effect on the high Antarctic benthic shelf communities?.....	276

4.10.6	Macroalgal physiology and ecology.....	278
4.10.7	Marine/terrestrial pollution.....	280
4.11	BIOGEOCHEMISTRY – SOUTHERN OCEAN CARBON CYCLE RESPONSE TO HISTORICAL CLIMATE CHANGE	286
4.11.1	Introduction.....	286
4.11.2	CO ₂ fluxes in the Southern Ocean.....	286
4.11.3	Historical change – observed response	288
4.11.4	Historical change – simulated view.....	290
4.11.5	Changes in CO ₂ inventories.....	291
4.11.6	Concluding remarks.....	293
4.12	TERRESTRIAL BIOLOGY	293
5	THE NEXT 100 YEARS	299
5.1	INTRODUCTION	299
5.2	CLIMATE CHANGE.....	300
5.2.1	IPCC scenarios	300
5.2.2	Climate models	303
5.2.3	Atmospheric circulation.....	307
5.2.4	Temperature change over the Twenty First Century.....	312
5.2.5	Precipitation change over the Twenty First Century	316
5.2.6	Antarctic stratospheric ozone over the next 100 years	319
5.3	OCEAN CIRCULATION AND WATER MASSES.....	326
5.3.1	Simulation of present-day conditions in the Southern Hemisphere	326
5.3.2	Projections for the Twenty First Century	327
5.3.3	Long-term evolution of the Southern Ocean	335
5.3.4	Conclusions	336
5.4	SEA ICE CHANGE OVER THE TWENTY FIRST CENTURY.....	337
5.5	THE TERRESTRIAL CRYOSPHERE.....	339
5.5.1	Introduction.....	339
5.5.2	East Antarctic ice sheet.....	340
5.5.3	West Antarctic ice sheet.....	341
5.5.4	Antarctic Peninsula.....	343
5.5.5	Conclusions.....	343
5.5.6	Summary and needs for future research.....	344
5.6	EVOLUTION OF ANTARCTIC PERMAFROST.....	345
5.7	PROJECTIONS OF SEA LEVEL IN ANTARCTIC AND SOUTHERN OCEAN WATERS BY 2100	345
5.7.1	Regional projections of mean sea-level rise.....	347
5.8	BIOGEOCHEMISTRY – RESPONSE OF THE SOUTHERN OCEAN CARBON CYCLE TO FUTURE CLIMATE CHANGE	349
5.8.1	Background.....	349
5.8.2	Future Southern Ocean carbon response.....	349
5.8.3	Response to increased CO ₂ uptake.....	352
5.8.4	Concluding remarks.....	354
5.9	BIOLOGY.....	354
5.9.1	Terrestrial Biology.....	355
5.9.2	Marine Biology.....	357
5.9.3	The Antarctic marine ecosystem in the year 2100.....	383
6	RECOMMENDATIONS	389
