

TREATISE ON ANALYTICAL CHEMISTRY

PART II

ANALYTICAL CHEMISTRY OF INORGANIC AND ORGANIC COMPOUNDS

VOLUME 14

With the cooperation of EDWARD W. D. HUFFMAN, *Huffman Laboratories, Inc.* and JOHN MITCHELL, JR., *E. I. du Pont de Nemours & Co.*, as section advisors.

AUTHORS OF VOLUME 14

ADAM S. INGLIS

STANLEY T. HIROZAWA

EDWARD C. OLSON

ROBERT T. HALL

ROBERT D. MAIR

PART II. ANALYTICAL CHEMISTRY OF INORGANIC
AND ORGANIC COMPOUNDS

CONTENTS VOLUME 14

SECTION B-1. Organic Analysis I. The Elements

Chlorine, Bromine, and Iodine. By *Edward C. Olson*

I. Introduction	2
II. Detection and Compound Identification	3
III. Separation of the Halogens	4
IV. Decomposition Methods	4
A. The Oxygen Flask Method	4
B. The Oxygen Tube	6
1. Catalytic	6
2. Empty	6
C. Catalytic Hydrogenation	6
D. Wet Combustion Methods	7
1. Carius Method	7
2. Zacherl and Krainick Method	7
E. Fusion Methods	8
1. Peroxide Fusion	8
2. Alkali Metal Fusion	8
F. Alkali Metal Suspensions, Solutions, and Adducts	9
V. Methods for the Determination of the Halogens	9
A. Gravimetric Methods	9
B. Titrimetric Methods	9
1. Argentimetric Titrations	10
a. Indicator Methods	10
b. The Volhard Method	10
c. Absorption Indicators	10
d. Other Argentimetric Methods	11
2. Electrometric Methods	11
a. Potentiometric Titration	11
b. Amperometric Titration	11
3. Methods Utilizing Mercury	12
a. Mercuric Oxycyanide Method	12
b. Mercurimetric Methods	12
4. Coulometric Titration	12
C. Amplification Methods	13
1. Iodine	13
2. Bromine	13
D. Recommended Decomposition Procedures	13
E. Recommended Methods for the Determination of the Halogens	15
1. The Carius Method	16
2. Potentiometric Titration	16
3. Constant-Current Coulometric Titration	17

4. Amperometric Titration	18
5. Iodometric Determination of Bromine	18
6. Iodometric Determination of Iodine	18
7. Analysis of Chlorine-Bromine and Chlorine-Iodine Mixtures	19
8. Analysis of Sample Containing Bromine-Iodine	19
References	20

SECTION B-2. Organic Analysis II. Functional Groups

Unsaturation. By *Stanley T. Hirozawa*

I. Introduction	25
II. Toxicology	25
III. Properties	26
A. Physical Properties	26
B. Chemical Properties	26
1. Reactions	26
2. Inductive Effects	27
3. Steric Effects	28
4. Catalysis	28
C. Electrochemical Properties	29
D. Spectral Properties	29
1. Infrared	29
2. Raman Spectroscopy	31
3. Ultraviolet Absorption	32
4. Nuclear Magnetic Resonance	32
IV. Separation	36
A. Adsorption Chromatography	36
1. Column Chromatography	37
a. Displacement Analysis	37
b. Development (Elution) Analysis	40
2. Thin-Layer Chromatography	42
3. Paper Chromatography	43
B. Chemical Methods	43
1. Absorption in Sulfuric Acid	43
2. Nitration	44
V. Detection	46
VI. Determination of Unsaturation	46
A. Chemical Methods	46
1. Halogenation	46
a. General	46
b. Bromine	67
c. Tribromide	71
d. Iodine	80
e. Iodine Chloride	81
f. Iodine Bromide	82
g. Bromine Chloride	84
h. Chlorine	85
i. Pseudohalogens	86
2. Hydrogenation	87
a. General	87
b. Methods	89
3. Oxidation	99
a. Peracid	99
b. Ozone	101
c. Permanganate-Periodate	104
4. Specific Methods for Various Types of Unsaturation	106
a. Vinyl Unsaturation—Mercuration	106

b. α,β -Unsaturated Compounds	113
c. Conjugated Diolefins—Maleic Anhydride	118
d. Acetylenic Compounds	119
5. Analysis of Mixtures	123
6. Microanalysis	127
B. Spectral Methods	128
1. Photometric Methods	128
a. Colorimetric Method	128
b. Ultraviolet	130
c. Infrared	132
d. Raman Spectroscopy	134
2. Mass Spectrometry	135
3. Nuclear Magnetic Resonance	136
C. Gas-Liquid Partition Chromatography	137
D. Polarography	141
E. Refractive Index	142
VII. Recommended Methods	142
A. Bromine in Carbon Tetrachloride	142
B. Cumulative Coulographic Titrimetry	142
C. Iodine Chloride (Wijs)	144
D. Iodine Bromide (Hanus)	145
E. Hydrogenation	145
F. Mercuration	147
G. Morpholine	148
References	149

Determination of Acyl Groups. By *Adam S. Inglis*

I. Introduction	162
II. Occurrence and Importance	162
III. Properties of Acyl Group	163
A. Physical Properties	163
B. Chemical Properties	163
IV. Separation and Conversion	165
A. Fission by Alkali	165
B. Fission by Acid	166
V. Detection and Identification	167
A. Physical Methods	167
1. Ultraviolet Absorption Spectroscopy	167
2. Infrared Spectroscopy	167
3. Nuclear Magnetic Resonance Spectroscopy	168
B. Chemical Methods	169
1. Esters and Acyl Halides	169
2. Formic Acid	169
3. Acetaldehyde	169
4. Acetate and Formate	170
5. Alkyl and Aryl Acetate	170
6. Acetyl Groups in Proteins	170
C. Radiochemical Method	171
VI. Determination	171
A. Cleavage Conditions	171
1. Alkaline Hydrolysis	171
2. Acid Hydrolysis	172
3. Chromic Acid Oxidation	173
4. Alcoholic Acid Hydrolysis	174
B. Isolation of the Acyl Group	175
1. Ion Exchange	175
2. Distillation	176
C. Determination of the Acyl Ion	182
1. Alkalimetric Titration	182

2. Iodometric Titration	183
3. Colorimetric Procedure	184
4. Gas Chromatography	184
D. Analysis of Difficult Substances	185
1. Determination of Carbohydrates	185
2. Use of Parent Substance	186
3. Substances with Very Low Acyl Contents	186
4. Substances with Different Acyl Groups	188
5. Interfering Elements	188
VII. Recommended Methods	189
A. Ion Exchange Procedure	189
B. Varied Hydrolysis Procedure	190
C. Gas Chromatography Procedure	193
1. After pressure alcoholysis	193
2. After acid hydrolysis of proteins and peptides	195
References	196

O-Alkyl, N-Alkyl, and S-Alkyl. By *Adam S. Inglis*

I. Introduction	200
II. Occurrence and Importance	203
III. Properties of Groups	203
A. Physical Properties	203
B. Pharmacological Properties	203
C. Chemical Properties	205
IV. Separation and Conversion	206
A. Mechanism	206
B. Influence of Substituents in the Molecule	207
C. <i>N</i> -Alkyl Fission	208
D. <i>S</i> -Alkyl Fission	208
E. Steric Effects	210
F. Molecular Rearrangements	210
V. Detection and Identification	211
A. Physical Methods	211
1. Ultraviolet Spectroscopy	211
2. Infrared Spectroscopy	211
3. Nuclear Magnetic Resonance Spectroscopy	212
B. Chemical Methods	213
1. Methoxyl and Ethoxyl	213
2. Alkyl Phenol Ethers	213
3. <i>O</i> - and <i>N</i> -Methyl	214
4. <i>O</i> - and <i>N</i> -Ethyl	214
VI. Determination	214
A. Effect of Solubility of Substance in Iodhydric Acid	215
B. The Iodhydric Acid Reagent	218
1. <i>O</i> -Alkyl and <i>S</i> -alkyl Determination	218
2. <i>N</i> -Alkyl Determination	220
C. Scrubbers	221
1. General	221
2. Thiosulfate Scrubbers	222
3. Alternative Liquid Scrubbers	224
4. Solid Scrubbers	225
5. Scrubbers for Sulfur Compounds	225
D. Absorption and Determination of Alkyl Iodide	226
1. Volumetric Procedure	226
2. Gasometric Procedure	226
3. Gravimetric Procedure	227
4. Separation of Alkyl Iodides	227
E. Effect of Carrier Gas	230

F. Analysis of Difficult Substances.....	233
1. Substances which Give Low Results.....	234
2. Substances which Give High Results.....	238
3. Specific Methoxyl Determination.....	240
G. Apparatus.....	240
1. Reaction Flask.....	241
2. Condensing System.....	241
3. Scrubber.....	244
4. Receivers.....	244
5. Modifications for <i>N</i> -Alkyl Determinations.....	244
6. Modifications for Volatile Liquids.....	246
VII. Recommended Methods.....	247
A. <i>O</i> -Alkyl Determination.....	247
1. Micro Method.....	247
2. Submicro Method.....	251
3. Semimicro and Micro Method.....	252
B. <i>N</i> -Alkyl Determination.....	253
1. Microchemical Method.....	253

Determination of Ethers and Epoxides. By *Robert T. Hall and Robert D. Mair*

I. Introduction.....	260
II. Analysis of Ethers and Epoxides.....	261
A. Inert or Noncyclic Ethers (ROR and ROR')	261
1. Physical and Chemical Properties.....	261
2. Chemical Reactivity.....	261
3. Chemical Methods of Analysis.....	262
4. Physical and Instrumental Methods.....	264
B. Vinyl Ethers.....	265
1. Physical Properties.....	265
2. Analytical Reactions.....	266
3. Chemical Methods of Analysis.....	266
4. Physical and Instrumental Methods.....	268
C. Small Ring Ethers— α -Epoxides or Oxiranes.....	270
1. Physical and Chemical Properties.....	270
2. Chemical Reactivity.....	271
3. Chemical Methods of Analysis.....	271
a. Hydrohalogenation.....	271
b. Special Types of Oxirane Linkages.....	274
c. Use of Other Nucleophilic Reagents.....	274
d. Colorimetric Methods.....	276
4. Physical and Instrumental Methods.....	277
a. Infrared and Near-Infrared.....	277
b. Other Methods.....	279
D. Oxetanes and Other Larger Ring Compounds.....	279
1. Chemical Reactivity and Chemical Methods.....	279
2. Physical and Instrumental Methods.....	280
III. Summary of Methods for Ethers and Epoxides.....	280
IV. Recommended Laboratory Procedures.....	282
A. Aliphatic Ethers—Detection and Identification.....	282
1. Paper Chromatography after Cleavage with 3,5-Dinitrobenzoyl Chloride and Zinc Chloride.....	282
2. Gas Chromatography after Reaction with Acetyl Chloride and Ferric Chloride.....	282
B. Vinyl Ethers—Quantitative Measurement.....	283
1. Hydrolysis.....	283
2. Iodine Addition.....	284

3. Mercuric Acetate Addition	285
4. Near Infrared	286
C. Alpha-Epoxides—Quantitative Measurement	286
1. Titration with Hydrobromic Acid	286
a. Direct	286
b. Indirect	288
2. <i>In situ</i> Hydrobromic Acid Method	288
3. Hydrochlorination with Pyridine-Hydrochloric Acid	288
4. Colorimetric	289
5. Near Infrared	290
