

Robert L. Brennan

Generalizability Theory

Springer

Contents

Preface	vii
Principal Notational Conventions	xix
1 Introduction	1
1.1 Framework of Generalizability Theory	4
1.1.1 Universe of Admissible Observations and G Studies .	5
1.1.2 Infinite Universe of Generalization and D Studies . .	8
1.1.3 Different Designs and/or Universes of Generalization	13
1.1.4 Other Issues and Applications	17
1.2 Overview of Book	18
1.3 Exercises	19
2 Single-Facet Designs	21
2.1 G Study $p \times i$ Design	22
2.2 G Study Variance Components for $p \times i$ Design	24
2.2.1 Estimating Variance Components	25
2.2.2 Synthetic Data Example	28
2.3 D Studies for the $p \times I$ Design	29
2.3.1 Error Variances	31
2.3.2 Coefficients	34
2.3.3 Synthetic Data Example	35

2.3.4	Real-Data Examples	37
2.4	Nested Designs	39
2.4.1	Nesting in Both the G and D Studies	40
2.4.2	Nesting in the D Study, Only	44
2.5	Summary and Other Issues	45
2.5.1	Other Indices and Coefficients	47
2.5.2	Total Score Metric	48
2.6	Exercises	50
3	Multifacet Universes of Admissible Observations and G Study Designs	53
3.1	Two-Facet Universes and Designs	54
3.1.1	Venn Diagrams	54
3.1.2	Illustrative Designs and Universes	57
3.2	Linear Models, Score Effects, and Mean Scores	60
3.2.1	Notational System for Main and Interaction Effects	61
3.2.2	Linear Models	63
3.2.3	Expressing a Score Effect in Terms of Mean Scores	66
3.3	Typical ANOVA Computations	67
3.3.1	Observed Mean Scores and Score Effects	67
3.3.2	Sums of Squares and Mean Squares	69
3.3.3	Synthetic Data Examples	70
3.4	Random Effects Variance Components	74
3.4.1	Defining and Interpreting Variance Components	74
3.4.2	Expected Mean Squares	76
3.4.3	Estimating Variance Components Using the <i>EMS</i> Procedure	79
3.4.4	Estimating Variance Components Directly from Mean Squares	80
3.4.5	Synthetic Data Examples	83
3.4.6	Negative Estimates of Variance Components	84
3.5	Variance Components for Other Models	85
3.5.1	Model Restrictions and Definitions of Variance Com- ponents	86
3.5.2	Expected Mean Squares	89
3.5.3	Obtaining $\sigma^2(\alpha M)$ from $\sigma^2(\alpha)$	89
3.5.4	Example: APL Program	90
3.6	Exercises	92
4	Multifacet Universes of Generalization and D Study Designs	95
4.1	Random Models and Infinite Universes of Generalization	96
4.1.1	Universe Score and Its Variance	97
4.1.2	D Study Variance Components	100
4.1.3	Error Variances	100

4.1.4	Coefficients and Signal-Noise Ratios	104
4.1.5	Venn Diagrams	107
4.1.6	Rules and Equations for Any Object of Measurement	108
4.1.7	D Study Design Structures Different from the G Study	109
4.2	Random Model Examples	110
4.2.1	$p \times I \times O$ Design with Synthetic Data Set No. 3 . .	110
4.2.2	$p \times (I:O)$ Design with Synthetic Data Set No. 3 . .	113
4.2.3	$p \times (R:T)$ Design with Synthetic Data Set No. 4 . .	115
4.2.4	Performance Assessments	117
4.3	Simplified Procedures for Mixed Models	120
4.3.1	Rules	121
4.3.2	Venn Diagrams	122
4.4	Mixed Model Examples	125
4.4.1	$p \times I \times O$ Design with Items Fixed	125
4.4.2	$p \times (R:T)$ Design with Tasks Fixed	125
4.4.3	Perspectives on Traditional Reliability Coefficients .	127
4.4.4	Generalizability of Class Means	130
4.4.5	A Perspective on Validity	132
4.5	Summary and Other Issues	135
4.6	Exercises	136
5	Advanced Topics in Univariate Generalizability Theory	141
5.1	General Procedures for D Studies	141
5.1.1	D Study Variance Components	142
5.1.2	Universe Score Variance and Error Variances	144
5.1.3	Examples	145
5.1.4	Hidden Facets	149
5.2	Stratified Objects of Measurement	153
5.2.1	Relationships Among Variance Components	155
5.2.2	Comments	156
5.3	Conventional Wisdom About Group Means	157
5.3.1	Two Random Facets	157
5.3.2	One Random Facet	159
5.4	Conditional Standard Errors of Measurement	159
5.4.1	Single-Facet Designs	160
5.4.2	Multifacet Random Designs	164
5.5	Other Issues	165
5.5.1	Covariances as Estimators of Variance Components .	166
5.5.2	Estimators of Universe Scores	168
5.5.3	Random Sampling Assumptions	171
5.5.4	Generalizability and Other Theories	174
5.6	Exercises	175

6	Variability of Statistics in Generalizability Theory	179
6.1	Standard Errors of Estimated Variance Components	180
6.1.1	Normal Procedure	181
6.1.2	Jackknife Procedure	182
6.1.3	Bootstrap Procedure	185
6.2	Confidence Intervals for Estimated Variance Components .	190
6.2.1	Normal Procedure	190
6.2.2	Satterthwaite Procedure	190
6.2.3	Ting et al. Procedure	191
6.2.4	Jackknife Procedure	195
6.2.5	Bootstrap Procedure	196
6.3	Variability of D Study Statistics	196
6.3.1	Absolute Error Variance	197
6.3.2	Feldt Confidence Interval for $E\rho^2$	198
6.3.3	Arteaga et al. Confidence Interval for Φ	200
6.4	Some Simulation Studies	201
6.4.1	G Study Variance Components	201
6.4.2	D Study Statistics	205
6.5	Discussion and Other Issues	208
6.6	Exercises	211
7	Unbalanced Random Effects Designs	215
7.1	G Study Issues	216
7.1.1	Analogous-ANOVA Procedure	217
7.1.2	Unbalanced $i:p$ Design	220
7.1.3	Unbalanced $p \times (i:h)$ Design	222
7.1.4	Missing Data in the $p \times i$ Design	225
7.2	D Study Issues	227
7.2.1	Unbalanced $I:p$ Design	228
7.2.2	Unbalanced $p \times (I:H)$ Design	231
7.2.3	Unbalanced $(P:c) \times I$ Design	233
7.2.4	Missing Data in the $p \times I$ Design	235
7.2.5	Metric Matters	237
7.3	Other Topics	240
7.3.1	Estimation Procedures	241
7.3.2	Computer Programs	245
7.4	Exercises	247
8	Unbalanced Random Effects Designs—Examples	249
8.1	ACT <i>Science Reasoning</i>	249
8.2	District Means for ITED <i>Vocabulary</i>	251
8.3	Clinical Clerkship Performance	257
8.4	Testlets	262
8.5	Exercises	265

9	Multivariate G Studies	267
9.1	Introduction	268
9.2	G Study Designs	273
9.2.1	Single-Facet Designs	275
9.2.2	Two-Facet Crossed Designs	278
9.2.3	Two-Facet Nested Designs	281
9.3	Defining Covariance Components	284
9.4	Estimating Covariance Components for Balanced Designs	286
9.4.1	An Illustrative Derivation	287
9.4.2	General Equations	289
9.4.3	Standard Errors of Estimated Covariance Components	293
9.5	Discussion and Other Topics	295
9.5.1	Interpreting Covariance Components	295
9.5.2	Computer Programs	297
9.6	Exercises	298
10	Multivariate D Studies	301
10.1	Universes of Generalization and D Studies	301
10.1.1	Variance-Covariance Matrices for D Study Effects	302
10.1.2	Variance-Covariance Matrices for Universe Scores and Errors of Measurement	303
10.1.3	Composites and A Priori Weights	305
10.1.4	Composites and Effective Weights	306
10.1.5	Composites and Estimation Weights	307
10.1.6	Synthetic Data Example	308
10.2	Other Topics	310
10.2.1	Standard Errors of Estimated Covariance Components	310
10.2.2	Optimality Issues	312
10.2.3	Conditional Standard Errors of Measurement for Composites	314
10.2.4	Profiles and Overlapping Confidence Intervals	317
10.2.5	Expected Within-Person Profile Variability	320
10.2.6	Hidden Facets	324
10.2.7	Collapsed Fixed Facets in Multivariate Analyses	326
10.2.8	Computer Programs	328
10.3	Examples	328
10.3.1	ACT Assessment Mathematics	328
10.3.2	Painting Assessment	334
10.3.3	Listening and Writing Assessment	339
10.4	Exercises	343

11 Multivariate Unbalanced Designs	347
11.1 Estimating G Study Covariance Components	347
11.1.1 Observed Covariance	349
11.1.2 Analogous <i>TP</i> Terms	349
11.1.3 <i>CP</i> Terms	353
11.1.4 Compound Means	359
11.1.5 Variance of a Sum	360
11.1.6 Missing Data	363
11.1.7 Choosing a Procedure	366
11.2 Examples of G Study and D Study Issues	367
11.2.1 ITBS Maps and Diagrams Test	367
11.2.2 ITED Literary Materials Test	373
11.2.3 District Mean Difference Scores	380
11.3 Discussion and Other Topics	388
11.4 Exercises	388
12 Multivariate Regressed Scores	391
12.1 Multiple Linear Regression	392
12.2 Estimating Profiles Through Regression	395
12.2.1 Two Independent Variables	395
12.2.2 Synthetic Data Example	401
12.2.3 Variances and Covariances of Regressed Scores	404
12.2.4 Standard Errors of Estimate and Tolerance Intervals	407
12.2.5 Different Sample Sizes and/or Designs	409
12.2.6 Expected Within-Person Profile Variability	412
12.3 Predicted Composites	415
12.3.1 Difference Scores	417
12.3.2 Synthetic Data Example	419
12.3.3 Different Sample Sizes and/or Designs	421
12.3.4 Relationships with Estimated Profiles	422
12.3.5 Other Issues	424
12.4 Comments	426
12.5 Exercises	427
Appendices	431
A. Degrees of Freedom and Sums of Squares for Selected Balanced Designs	431
B. Expected Mean Squares and Estimators of Random Effects Variance Components for Selected Balanced Designs	435
C. Matrix Procedures for Estimating Variance Components and Their Variability	439
D. Table for Simplified Use of Satterthwaite's Procedure	445
E. Formulas for Selected Unbalanced Random Effects Designs	449
F. Mini-Manual for GENOVA	453
G. urGENOVA	471

H. mGENOVA	473
I. Answers to Selected Exercises	475
References	507
Author Index	521
Subject Index	525
