Preface		v
Chapter 1	INTRODUCTION	1
1.1	The Dynamic Optimization Problem	1
1.2	The Control Problem	1
1.3	The State of the Dynamic System	2
1.4	The Control Variables	3
1.5	Reachability, Controllability and Observability	3
1.6	The Objective Functional	4
1.7	Some Examples	5
1.8	The Calculus of Variations and Optimal Control Problems	6
Chapter 2	THE CALCULUS OF VARIATIONS	8
2.1	Functionals and their Variations	9
2.2	A Necessary Condition: The Euler Equation . .	11
2.3	Generalizations of Euler's Equation	16
2.3.1	Case of Several Variables	16
2.3.2	Case where f involves derivatives of nth order	17
2.4	Particular Cases of the Euler Equation	19
2.4.1	Absence of x	19
2.4.2	Absence of t	21
2.4.3	Absence of $\dot{x}$	22
2.4.4	$f(x, \dot{x}, t)$ is linear in $\dot{x}$	24
2.5	Variational Problems with Constraints	26
2.5.1	Point and Differential Equation Constraints	26
2.5.2	Isoperimetric Constraint	28
2.6	Some Economic Applications	32
2.6.1	Dynamic Pure Competition	32
2.6.2	Dynamic Utility and Capital Accumulation .	33
2.6.3	Capital Theory	34
2.6.4	Time Optimal Problem in Economic Planning .	36
2.6.5	Optimal Education and Balanced Growth . .	37
2.6.6	Micro Foundations of Macro Models	40
2.6.7	Constrained Optimal Consumption Plan . . .	41
2.6.8	Optimal Waste Disposal	42
2.6.9	The Perimetric Problem of Non-Renewable Resources	44
2.7	Summary and Conclusion	45

		Page
Chapter 3	BOUNDARY CONDITIONS IN VARIATIONAL PROBLEMS	48
3.1	Two fixed End Point and Natural Boundary Problems	48
3.2	Variable End Points	50
3.3	Broken Extremals and the Erdman-Weierstrass Corner Conditions	64
3.4	Canonical Form of the Euler Equation	72
3.5	Some Economic Applications	75
3.5.1	Dynamic Monopoly	75
3.5.2	Optimal Economic Growth	77
3.5.3	Capital Theory with Exhaustible Resources .	81
3.5.4	Optimal Mining with Incomplete Exhaustion .	85
3.6	Summary	88
Chapter 4	SECOND VARIATIONS AND SUFFICIENCY CONDITIONS	90
4.1	Introduction	90
4.2	Variations of Functionals	91
4.3	The Legendre Condition	92
4.4	The Jacobi Condition	93
4.5	The Weierstrass Condition for Strong Extrema . .	95
4.6	The Legendre-Clebsch Condition	98
4.7	Sufficient Conditions: An Important Special Case	102
4.8	Summary and Conclusion	105
	Appendix to Chapter 4	109
Chapter 5	OPTIMAL CONTROL: THE VARIATIONAL APPROACH	110
5.1	Introduction	110
5.2	From the Calculus of Variations to Optimal Control	110
5.3	Pontryagin's Maximum Principle	113
5.4	Transversality Conditions	122
5.4.1	Problems with Fixed Final Time T	123
5.4.2	Problems with Free Final Time T	124
5.4.3	Transversality Conditions in Infinite Horizon Problems	130
5.5	Second Variations and Sufficient Conditions . . .	135
5.6	Some Economic Applications	140
5.6.1	Dynamic Monopoly	140
5.6.2	Optimal Growth	141
5.6.3	Non-Renewable Resources	144
5.6.4	Optimal Population	146
5.6.5	Optimal Phasing of Deregulation	148
5.7	Summary and Conclusion	151

		Page
Chapter 6	CONSTRAINED OPTIMAL CONTROL PROBLEMS	153
6.1	Introduction	153
6.2	Optimal Control with Equality Constraints	153
6.3	Optimal Control with Inequality Constraints	158
	6.3.1 Bounded Control Variables	158
	Application: Permanent Capital in the Resource Industries	169
	6.3.2 Bounded State Variables	171
	Application: Optimal Investment in Physical and Human Capital	176
6.4	Dynamic Programming, Hamilton-Jacobi Equation and the Euler Equation	183
6.5	Summary and Conclusion	188
	Appendix to Chapter 6	190
Chapter 7	LINEAR OPTIMAL CONTROL	193
7.1	Introduction	193
7.2	Bang Bang Control and Time Minimum Problem	195
	Economic Application: Optimal Monetary Policy	202
7.3	Singular Control	205
7.4	Singular Control and the Calculus of Variations	213
7.5	Singularity and Controllability	214
7.6	Some Economic Applications	216
	7.6.1 Optimal Economic Growth	216
	7.6.2 Resource Economics	219
	Reproducible Resources	220
	Non-Renewable Resources	224
	7.6.3 Optimal Domestic and Foreign Investment	226
7.7	Summary and Conclusion	233
Chapter 8	STABILIZATION CONTROL MODELS	234
8.1	Introduction	234
8.2	Linear Regulator Problems	235
8.3	Linear Tracking Problems	240
8.4	Controllability	245
8.5	Observability	247
8.6	Some Economic Applications	248
	8.6.1 The Multiplier-Accelerator Model	248
	8.6.2 Production and Inventory Stabilization Model	251
	8.6.3 Economic Stabilization: The Austrian Case	253
8.7	Conclusion	255

		Page
Chapter 9	DISCRETE CONTROL SYSTEMS	256
9.1	Introduction	256
9.2	Discrete Calculus of Variations	256
	Example 9.1 Discrete Optimal Growth Model	258
9.3	Discrete Maximum Principle	261
	Example 9.2 Optimal Management of Renewable Resources	264
	Example 9.3 Discrete Linear Regulator	266
	Example 9.4 Linear Tracking and Economic Stabilization	268
	Example 9.5 Optimal Wage Price Control	273
Chapter 10	SENSITIVITY ANALYSIS	277
10.1	Introduction	277
10.2	Sensitivity Theory	278
10.3	Cross Sensitivity	281
10.4	Objective Functional Sensitivity	282
10.5	Stability and Sensitivity	283
10.6	Some Economic Applications	285
10.6.1	Tax and Taste Sensitivity and Cross Sensitivity	285
10.6.2	Optimal Growth Model: Sensitivity and Comparative Dynamics	287
10.7	Conclusion	291
Chapter 11	DIFFERENTIAL GAMES	293
11.1	Introduction	293
11.2	Game Theory	294
11.2.1	Two-Person Zero-Sum Games	295
11.2.2	Non-Zero Sum Games	304
11.2.3	Economic Applications	308
11.3	Differential Games	315
11.3.1	The Nash Equilibrium Solution	319
11.3.2	The Stackelberg Equilibrium Solution	321
11.3.3	Linear Quadratic Differential Games	324
11.3.4	Dynamic Programming and Differential Games	329
11.3.5	Some Tractable Differential Game Problems	330
11.3.6	Some Economic Applications	331
	1. Dynamic Duopoly	331
	2. Collective Bargaining	333
	3. Arms Race Differential Games	336
	4. Economic Growth and Distribution: A Class Struggle Game	339
	5. Economic Stabilization Game	342
11.4	Conclusion	344
Chapter 12	STABILITY OF OPTIMAL CONTROL	345
12.1	Introduction	345
12.2	Asymptotic Stability of Hamiltonian Systems	347
12.3	Asymptotic Stability of Hamiltonian Economic Systems	353

		Page
	12.3.1 Stability of Optimal Economic Growth Models	354
	12.3.2 Stability of Linear Regulator Models	357
	12.3.3 Summary and Some New Results	359
12.4	Stability, Correspondence Principle and Comparative Statics	361
	12.4.1 Comparative Statics and Optimal Growth Models	363
	12.4.2 Comparative Statics and Capital Theory	364
12.5	Structural Stability of Optimal Control	365
	12.5.1 Structural Stability Concepts	366
	12.5.2 Structural Stability of Hamiltonian Economic Systems	367
	12.5.3 Gyroscopic Forces in Hamiltonian Economic Systems	369
12.6	Conclusion	372
Chapter 13	SOME ECONOMIC AND MANAGEMENT APPLICATIONS	373
13.1	Introduction	373
13.2	Some Economic Applications	374
	13.2.1 Optimal Economic Growth	374
	13.2.1.1 The One-Sector Optimal Growth Model	375
	13.2.1.2 Technical Progress in the Aggregate Model	381
	13.2.1.3 Two-Sector Models	381
	13.2.1.4 The Multisectoral Optimal Growth Models	388
	13.2.1.5 Numerical Methods for Optimal Growth Models	390
	13.2.2 Economic Stabilization Models	392
	13.2.3 Dynamic Theory of the Firms	392
	13.2.4 International Trade	393
	13.2.5 Regional Economics	396
	13.2.6 Optimal Urban Economics	399
	13.2.7 Education, Labour Training and Human Capital	402
	13.2.8 Natural Resources	403
	13.2.9 Optimal Control of Pollution	403
	13.2.10 Optimal Population Control	405
	13.2.11 Optimal Control of the Armament Build-up	405
13.3	Some Management Science Applications: A Dynamic Theory of the Managerial Firm	411
	13.3.1 Optimal Financing Model	411
	13.3.2 Optimal Production and Inventory Models	414
	13.3.3 Marketing Models	414
	13.3.4 Maintenance Models	418
13.4	Conclusion	420
MATHEMATICAL APPENDIX: REVIEW OF DIFFERENTIAL AND DIFFERENCE EQUATIONS		
A.1	Introduction	421
A.2	Differential Equations	421
A.2.1	First Order Linear Differential Equation Systems	423
A.2.2	Fundamental Matrix	425
A.2.3	The nth Order Linear Differential Equation	427
A.2.4	Non-Homogeneous First Order Differential Equation Systems	427

		Page
A.3	Difference Equations	431
A.4	Stability of Differential and Difference Equations	435
A.5	Phase Diagrams and Non-Linear Differential Equations . . .	437
A.6	Isoclines.	441
A.7	Non-Linear Differential Equations.	444
A.8	Phase Diagrams of Difference Equations	447
A.9	Liapunov's Second (or Direct) Method	449
