Sunderland, Massachusetts U.S.A.

Contents

Preface xi

1. Conservation and Biological Diversity 1

Conservation Biology's Interdisciplinary Approach:
A Case Study with Sea Turtles 3

Why Is Conservation Needed? 6

Conservation Biology's Ethical Principles 8

The Origins of Conservation Biology 9

What Is Biological Diversity? 11

Species diversity 12

BOX 1.1 THE ORIGIN OF NEW SPECIES 13

BOX 1.2 NAMING AND CLASSIFYING SPECIES 16

Genetic diversity 18

Community diversity 19

Where Is the World's Biological Diversity Found? 27

How many species exist worldwide? 30

Extinction and Economics: Losing Something of Value 34

Patterns of extinction 34

Ecological economics 36

Common property resources 37

Direct Economic Values 39

Consumptive use value 40

Productive use value 42

Indirect Economic Values 44

Nonconsumptive use value 44

Option value 51

Existence value 53

Environmental Ethics 54

Deep ecology 57

Summary 58

Suggested Readings 60

2. Threats to Biological Diversity 61

Rates of Extinction 62

The Current, Human-Caused Extinctions 63

Extinction rates in water and on land 66

Island Biogeography and Modern Extinction Rates 68

Local extinctions 71

Causes of Extinction 72

Habitat destruction 75

Habitat fragmentation 84

Habitat degradation and pollution 89

Global climate change 95

Overexploitation 100

Invasive species 105

Disease 110

Vulnerability to Extinction 113

Summary 117

Suggested Readings 119

3. Conservation at the Population and Species Levels 121

Essential Concepts for Small Populations 122

The Problems of Small Populations 123

Loss of genetic variability 125

Effective population size 129

Demographic variation 132

Environmental variation and catastrophes 133

Extinction vortices 135

Applied Population Biology 136*Methods for studying populations 137***Establishment of New Populations 146***Considerations for successful programs 148**Establishing new plant populations 152**The status of new populations 154***Ex Situ Conservation Strategies 155***Zoos 157**Aquariums 161**Botanical gardens 162***Conservation Categories of Species 166****Legal Protection of Species 171***National laws 171**International agreements to protect species and habitats 174***Summary 178****Suggested Readings 179****4. Conserving Biological Communities 183****Protected Areas 184***Classification of protected areas 185**Establishing priorities for protection 188**Prioritization systems 189***Designing Networks of Protected Areas 200***Protected area size and characteristics 201**Minimizing edge and fragmentation effects 204**Conservation networks 205**Linking protected areas with habitat corridors 205**Landscape ecology and park design 208***Managing Protected Areas 210***Management and monitoring 211**Managing habitat 213**Protected area management and people 215**Challenges in park management 219***Outside Protected Areas 219***Human-dominated landscapes 221**Ecosystem management 223***Restoration Ecology 225***Restoration of some major communities 229**The future of restoration ecology 234*

Summary 234
Suggested Readings 235

5. Conservation and Sustainable Development 239

Government Action 239
 Local legislation 239
 National laws 243
Traditional Societies, Conservation, and Sustainable
 Development 244
 Conservation ethics of traditional societies 245
 Local people and their governments 246
International Approaches to Conservation and Sustainable
 Development 251
 International agreements and summits 252
 International funding 256
 International development banks and ecosystem damage 260
Ongoing Problems and Possible Responses 265
The Role of Conservation Biologists 270
Summary 273
Suggested Readings 274

**Appendix: Selected Environmental Organizations
and Sources of Information 277**

Glossary 281

Bibliography 287

Index 311
