Foreword Pierre Aigrain	<i>page</i> ix
Acknowledgements	xiii
List of Contributors	xv
1 Introduction and Executive Summary	1
2 Interdependence: The Technological Dimension	8
The Origins of Microelectronics Technology	8
Microelectronics: The Production Process	13
Microelectronics: Technology and Technological Trends	17
3 The Economic Structure of the Industry	26
Semiconductor Production	26
Consumption and End-Use Demand	29
National Shares by Geographic Market and by Product	33
Industrial Structure	36
Investment Behavior	46
4 International Trade in Semiconductor Products	51
Offshore Assembly	52
US International Trade	58
Japanese and European Trade	61
5 Technical Alliances in the Semiconductor Industry	64
Foreign Direct Investment and Acquisitions	65
Interfirm Technical Agreements	83
Other Collaborative Arrangements for Research	94
6 Patterns of Competitive Strategy	101
Competitive Strategy: The Framework	102
Competition, Co-operation, and Strategy	116
Strategy and International Competitive Advantage	118
7 Government Policies towards the Microelectronics Industry	128
Public Sector Programs to Support Industrial Research	129

The Origins of Today's Policies	151
The Contemporary Scene	156
Rocks in the Path Ahead	160
8 Interdependence and Competition: What Does it All Mean?	164
An Industry in Transition	165
International Interdependence: The Implications	179
Catching Up or Getting Ahead?	184
Life at the Frontier	192
Bibliography	201
Index	208
