ADVANCING RIVER RESTORATION AND MANAGEMENT

 **WILEY-BLACKWELL**

A John Wiley & Sons, Ltd., Publication

Contents

List of Contributors, xi

Foreword, xiii

Series Foreword, xv

Preface, xvi

- 1 **Introduction to Restoration: Key Steps for Designing Effective Programs and Projects, 1**
 - 1.1 Introduction, 1
 - 1.2 What is restoration?, 2
 - 1.3 Why is restoration needed?, 3
 - 1.4 History of the environmental movement, 4
 - 1.5 History of stream and watershed restoration, 5
 - 1.6 Key steps for planning and implementing restoration, 7
 - 1.7 References, 8

- 2 **Watershed Processes, Human impacts, and Process-based Restoration, 11**
 - 2.1 Introduction, 11
 - 2.2 The hierarchical structure of watersheds and riverine ecosystems, 13
 - 2.3 The landscape template and biogeography, 17
 - 2.4 Watershed-scale processes, 18
 - 2.4.1 Runoff and stream flow, 18
 - 2.4.2 Erosion and sediment supply, 20
 - 2.4.3 Nutrients, 22
 - 2.5 Reach-scale processes, 22
 - 2.5.1 Riparian processes, 22
 - 2.5.2 Fluvial processes: Stream flow and flood storage, 26
 - 2.5.3 Fluvial processes: Sediment transport and storage, 27
 - 2.5.4 Channel and floodplain dynamics, 28
 - 2.5.5 Organic matter transport and storage, 29
 - 2.5.6 Instream biological processes, 29
 - 2.6 Common alterations to watershed processes and functions, 31
 - 2.6.1 Alteration of watershed-scale processes, 31
 - 2.6.2 Alteration of reach-scale processes, 34
 - 2.6.3 Direct manipulation of ecosystem features, 35
 - 2.7 Process-based restoration, 35
 - 2.7.1 Process-based principles for restoration, 36
 - 2.7.2 Applying the principles to restoration, 37
 - 2.8 Summary, 40
 - 2.9 References, 40

- 3 Watershed Assessments and Identification of Restoration Needs, 50**
 - 3.1 Introduction, 50
 - 3.2 The role of restoration goals in guiding watershed assessments, 51
 - 3.2.1 Stating restoration goals, 52
 - 3.2.2 Designing the watershed assessment to reflect restoration goals and local geography, 53
 - 3.3 Assessing causes of habitat and biological degradation, 56
 - 3.3.1 Use of landscape and river classification to understand the watershed template, 57
 - 3.3.2 Assessing watershed-scale (non-point) processes, 61
 - 3.3.2.1 Sediment supply: Erosion and delivery to streams, 61
 - 3.3.2.2 Hydrology: Runoff and stream flow, 63
 - 3.3.2.3 Nutrients and pollutants, 68
 - 3.3.3 Assessing reach-scale processes, 70
 - 3.3.3.1 Riparian processes, 70
 - 3.3.3.2 Floodplain processes, 73
 - 3.3.3.3 Fluvial processes and conditions, 73
 - 3.4 Assessing habitat alteration, 79
 - 3.4.1 Habitat type and quantity, 79
 - 3.4.2 Water quality, 84
 - 3.5 Assessing changes in biota, 86
 - 3.5.1 Single-species assessment, 86
 - 3.5.2 Multi-species assessment, 89
 - 3.6 Assessing potential effects of climate change, 91
 - 3.7 Identifying restoration opportunities, 93
 - 3.7.1 Summarize the watershed assessment results and identify restoration actions, 93
 - 3.7.2 Develop a restoration strategy, 94
 - 3.7.3 Summarize constraints on restoration opportunities, 95
 - 3.7.4 Climate change considerations, 96
 - 3.8 Case studies, 96
 - 3.8.1 Skagit River, Washington State, USA, 96
 - 3.8.2 River Eden, England, UK, 100
 - 3.9 Summary, 103
 - 3.10 References, 104

- 4 The Human Dimensions of Stream Restoration: Working with Diverse Partners to Develop and Implement Restoration, 114**
 - 4.1 Introduction, 114
 - 4.2 Setting the stage: Socio-political geography of stream restoration, 116
 - 4.2.1 Nature of the challenge, 116
 - 4.2.2 Understanding property and property rights, 116
 - 4.2.3 Landscapes of restoration, 117
 - 4.2.4 Understanding landowner/manager and agency objectives, 120
 - 4.2.5 Why understanding socio-political geography is important, 121
 - 4.3 How stream restoration becomes accepted, 122
 - 4.3.1 Restoration as innovation, 123
 - 4.3.2 Innovation diffusion through networks, 123
 - 4.3.3 Process of innovation adoption, 123
 - 4.3.4 Innovation acceptance, 124
 - 4.3.5 Why understanding innovation diffusion is important, 125

-
- 4.4 Organizations and the behaviors and motivations of those who work for them, 125
 - 4.4.1 Organizational behaviors and motivations, 126
 - 4.4.1.1 Motivations of officials, 126
 - 4.4.1.2 Leveraging organizational behaviors, 126
 - 4.4.2 Understanding your own and other organizations, 127
 - 4.4.3 Why understanding organizational patterns is important, 129
 - 4.5 Approaches to elicit cooperation, 132
 - 4.5.1 Institutions to support stream restoration, 132
 - 4.5.2 Techniques to engage landowners, 133
 - 4.5.3 Achieving agreement with project partners, 136
 - 4.5.3.1 The Prisoner's Dilemma, 136
 - 4.5.3.2 Guidelines to build and maintain cooperation, 136
 - 4.5.4 Why understanding cooperation is important, 138
 - 4.6 Moving forward: Further reading in human dimensions of stream restoration, 139
 - 4.6.1 Collective action, 139
 - 4.6.2 Social capital and the triple bottom line, 139
 - 4.6.3 Environmental justice, 140
 - 4.6.4 Resilience, 140
 - 4.7 Summary, 140
 - 4.8 References, 141
- 5 Selecting Appropriate Stream and Watershed Restoration Techniques, 144**
- 5.1 Introduction, 144
 - 5.1.1 Common categories of techniques, 144
 - 5.1.2 Selecting the appropriate technique: What process or habitat will be restored or improved?, 146
 - 5.2 Connectivity, 147
 - 5.2.1 Longitudinal connectivity, 147
 - 5.2.1.1 Dam removal and modification, 147
 - 5.2.1.2 Culvert and stream-crossing removal, replacement or modification, 149
 - 5.2.1.3 Fish passage structures, 151
 - 5.2.2 Techniques to restore lateral connectivity and floodplain function, 152
 - 5.2.2.1 Levee removal or setbacks, 152
 - 5.2.2.2 Reconnecting isolated floodplain wetlands, sloughs, and other habitats, 153
 - 5.3 Sediment and hydrology, 154
 - 5.3.1 Reducing sediment and hydrologic impacts of roads, 154
 - 5.3.1.1 Forest and unpaved road removal and restoration, 154
 - 5.3.1.2 Road improvements, 155
 - 5.3.1.3 Reducing or eliminating impacts of paved roads and impervious surfaces, 157
 - 5.3.2 Reducing sediment and pollutants from agricultural lands, 158
 - 5.3.3 Increasing sediment supply, retention and aggrading incised channels, 160
 - 5.3.4 Increasing instream flows and flood pulses, 160

- 5.4 Riparian restoration strategies, 161
 - 5.4.1 Silviculture techniques, 161
 - 5.4.1.1 Planting, 161
 - 5.4.1.2 Thinning to promote tree and vegetation growth, 164
 - 5.4.1.3 Removal of exotic and invasive species, 164
 - 5.4.2 Fencing and grazing reduction, 165
 - 5.4.3 Riparian buffers and protection, 167
 - 5.5 Habitat improvement and creation techniques, 167
 - 5.5.1 Instream habitat improvement techniques, 167
 - 5.5.1.1 Structures to create pools, riffles, and cover and improve complexity, 168
 - 5.5.1.2 Gravel addition and creation of spawning habitat, 171
 - 5.5.1.3 Recreating meanders, 171
 - 5.5.2 Creation of floodplain habitats, 172
 - 5.5.3 When are habitat improvement techniques appropriate?, 173
 - 5.6 Miscellaneous restoration techniques, 173
 - 5.6.1 Beaver restoration or control, 174
 - 5.6.2 Bank stabilization, 174
 - 5.6.3 Nutrient additions, 175
 - 5.6.4 Vegetation management, 176
 - 5.6.5 Other factors to consider when selecting restoration techniques, 177
 - 5.7 Summary, 178
 - 5.8 References, 179
- 6 Prioritization of Watersheds and Restoration Projects, 189**
- 6.1 Introduction, 189
 - 6.2 Determine overall goals and scale, 190
 - 6.2.1 Legal frameworks, funding, and goals, 192
 - 6.2.2 Spatial and temporal scale, 192
 - 6.3 Who will prioritize projects? Selecting the team, 194
 - 6.4 Prioritization approaches and criteria, 194
 - 6.4.1 Common prioritization strategies, 195
 - 6.4.1.1 Prioritizing restoration actions by project type, 195
 - 6.4.1.2 Refugia, 195
 - 6.4.1.3 Habitat area and increase in fish or other biota, 199
 - 6.4.1.4 Capacity and life-cycle models for prioritizing habitats, 199
 - 6.4.1.5 Costs, cost-effectiveness, and cost-benefit analysis, 201
 - 6.4.1.6 Conservation planning software and computer models, 203
 - 6.4.1.7 Scoring and multi-criteria decision analysis, 204
 - 6.4.2 Selecting a prioritization approach, 206
 - 6.5 Completing analyses and examining rankings, 207
 - 6.6 Summary, 210
 - 6.7 References, 210
- 7 Developing, Designing, and Implementing Restoration Projects, 215**
- 7.1 Introduction, 215
 - 7.2 Identify the problem, 217
 - 7.3 Assess project context, 218

- 7.4 Define project goals and objectives, 219
 - 7.5 Investigative analysis, 221
 - 7.5.1 Investigative analyses for in-channel restoration projects, 221
 - 7.5.1.1 Maps and surveys, 221
 - 7.5.1.2 Hydrologic investigation, 223
 - 7.5.1.3 Hydraulic modeling, 227
 - 7.5.1.4 Sediment transport analysis, 230
 - 7.5.1.5 Geomorphic investigation, 231
 - 7.5.1.6 Geotechnical assessment, 232
 - 7.5.1.7 Uncertainty and risk, 233
 - 7.5.2 Investigative analyses for other restoration actions, 234
 - 7.6 Evaluate alternatives, 235
 - 7.7 Project design, 236
 - 7.7.1 Design approaches, 237
 - 7.7.2 Specify project elements that will meet project objectives, 238
 - 7.7.3 Establish design criteria for project elements that define expectations, 238
 - 7.7.4 Develop design details to meet criteria for each element, 239
 - 7.7.5 Verify that elements address project objectives, 239
 - 7.7.6 Communicating project design, 239
 - 7.7.6.1 Design reports, 240
 - 7.7.6.2 Plans and specifications, 240
 - 7.8 Implementation, 241
 - 7.9 Monitoring, 242
 - 7.10 Case studies, 242
 - 7.10.1 Removal of the Number 1 Dam, Chichiawan River, Taiwan, 243
 - 7.10.2 Bridge Creek riparian restoration, 245
 - 7.10.3 Fisher Slough Restoration, Skagit River, Washington, USA, 245
 - 7.11 Summary, 248
 - 7.12 References, 249
- 8 Monitoring and Evaluation of Restoration Actions, 254**
- 8.1 Introduction, 254
 - 8.2 What is monitoring and evaluation?, 255
 - 8.3 Steps for developing an M&E program, 256
 - 8.3.1 Defining restoration goals and monitoring objectives, 256
 - 8.3.2 Defining questions, hypotheses, and spatial scale, 257
 - 8.3.2.1 Defining the spatial scale, 259
 - 8.3.3 Selecting the monitoring design, 260
 - 8.3.3.1 Treatments, controls, and references, 260
 - 8.3.3.2 Before-after and before-after control-impact designs, 261
 - 8.3.3.3 Post-treatment designs, 261
 - 8.3.3.4 Which design is most appropriate?, 263
 - 8.3.4 Parameters: Determining what to monitor, 264
 - 8.3.5 Determining how many sites or years to monitor, 269
 - 8.3.6 Sampling scheme, 272
 - 8.4 Guidelines for analyzing and summarizing data, 273
 - 8.5 Monitoring of multiple restoration actions at a watershed scale, 273
 - 8.6 Implementation: Design is not enough, 274

- 8.7 Summary, 275
- 8.8 References, 276
- 9 Synthesis: Developing Comprehensive Restoration Programs, 280**
 - 9.1 Introduction, 280
 - 9.2 Components of a comprehensive restoration program, 280
 - 9.2.1 Goals, assessments, and identifying restoration actions, 282
 - 9.2.2 Prioritizing restoration actions or watersheds, 282
 - 9.2.3 Selecting restoration techniques and designing restoration actions, 282
 - 9.2.4 Monitoring, 283
 - 9.2.5 Examples of bringing the components together, 284
 - 9.3 Developing proposals and evaluating projects for funding or permitting, 286
 - 9.4 Moving from opportunistic to strategic restoration, 287
 - 9.5 Conclusions, 289
 - 9.6 References, 289
- Index, 290**
- See Colour plate Section between 160–161**
