

*An Econometric Model  
Integrating Conservation Measures  
in the Residential Demand for Electricity*

<i>List of Tables</i>	xiii
<i>Acknowledgments</i>	xv
<i>Summary</i>	xvii

<b>Introduction</b>	<b>1</b>
Historical Motivation	1
Scope of This Study	3
<i>To summarize</i>	5
Other Salient Features of the Study	7
The Study in Perspective: Joint Determination of the Demand for Energy and Conservation: Relationship with Demand-Side Management	9
Plan of the Work	13

## PART I. BACKGROUND

I. The Engineering Effect of Conservation	17
II. An Economic Analysis of the Effect of Conservation	21
III. A Glance at the State of the Art	29
"Conditional Demand" for Energy in the Household Sector	30
The Oak Ridge Residential Model	30
IV. Issues in the Quantification of Conservation Impact on the Residential Demand for Electricity	33
Measurability of the Contribution of Individual Measures or Programs	35

Criteria Governing the Choice of a Credible Estimating Framework	35
Stringency to the Statistical Tests	35
Guidelines for Disaggregation and the Problem of End-Use Models	36
<i>A General Discussion</i>	36
<i>The Problem of Specification</i>	38
<i>The Quality of the Micro Data</i>	38
<i>Implications of the Results from the Literature for Disaggregation</i>	39
<i>The Problem of End-Use Models</i>	40
<i>Cost and Benefit of Disaggregation</i>	40
Measurement Accuracy	41

## PART II. MODEL SPECIFICATION

V. <b>Incorporation of the Appliance Efficiency Variable</b>	49
Grouping of SMUD's Conservation Measures	49
The Framework	53
Derivation of the Average Efficiency of the Capital Stock of an Appliance	57
Aggregation over Appliances	60
A Note on Randomizing the Shares of End Uses	66
A Note on Forecasting the Future Stock of Appliances	69
VI. <b>Incorporation of Thermal Integrity and Awareness Variables in the Model Specification</b>	71
A Note on the Basic Data Compiled for the Thermal Integrity Index	75
Elements in the Total Thermal Integrity Index $I_{TITOT,ij}$	78
$I_{T,ij}$ : <i>Average Thermal Integrity</i>	80
$I_{A,ij}$ : <i>Area Index</i>	82
$I_{N,ij}$ : <i>Number-of-Dwellings Index</i>	83
$I_{W,ij}$ : <i>Weather Index</i>	84
Aggregation over Dwellings and Within End Use	86

A Multiplicative Analysis of the Total Thermal Integrity Index	88
Allowance for Weather Variability	92
Other Adjustments of the Indices	95
<i>Adjustments in <math>I_{\overline{T}}</math> for Uses Other Than Electric Heating and Air Conditioning</i>	95
<i>Adjustments of <math>I_{TITOT}</math> for Uses Other than Electric Heating and Air Conditioning</i>	97
<i>Adjustment of the Product <math>I_{TITOT} \times I_{AETOT}</math> for Double Counting the Capital Widening</i>	101
<b>VII. Specification of Other Demand-Determining Variables</b>	<b>105</b>
Marginal Price and Fixed Cost of Electricity	105
Price of Substitutes	108
Income	108
User's Cost	108
<i>A Remark on the Data</i>	109
<b>PART III. ESTIMATION</b>	
<b>VIII. Problems of Estimation</b>	<b>117</b>
The Simultaneity Problem	117
Functional Form and Related Estimation Problems	119
<b>IX. Data and Operational Definitions of the Variables</b>	<b>125</b>
<b>X. IOLS Estimation Results</b>	<b>127</b>
Observations on the Estimated Models	127
Calculation of Elasticity Measures	129
Conditional IOLS Estimates for Electrically Heated Dwellings	132
An Analysis of the Preferred Model for Electrically Heated Dwellings	136
The Short- and Long-Run Elasticities and the Erosion of the Benefit of Conservation	138

	Allowing for Seasonal Differences in Price Elasticities	142
	Conditional IOLS Results for Gas-Heated Homes	144
XI.	<b>Consistent Estimation</b>	<b>153</b>
	LIML Results for Electrically Heated Homes	153
	Some Tests of Model (5*) of Table 11.1	158
	<i>Overidentifying Restrictions</i>	158
	<i>Normality</i>	159
	<i>Serial Correlation</i>	160
	Conclusion	162
