

Photosynthesis: from Light to Biosphere

Volume IV

*Proceedings of the Xth International Photosynthesis Congress,
Montpellier, France, 20–25 August 1995*

edited by

PAUL MATHIS

*Section de Bioénergétique,
CEA-Saclay, France*

KLUWER ACADEMIC PUBLISHERS

DORDRECHT / BOSTON / LONDON

GENERAL CONTENTS

Volume I

- 1. Antenna systems : structure and function**
- 2. Reaction centers : purple bacteria and PSII**
- 3. Evolution of photosynthesis**

Volume II

- 4. Reaction centers : green sulfur bacteria and PSI**
- 5. Oxygen evolution**
- 6. Cytochrome complexes**
- 7. Electron transfer proteins**
- 8. Alternative electron pathways and regulation**

Volume III

- 9. ATPase, protons and energy transduction**
- 10. Organisation of the photosynthetic apparatus**
- 11. Expression and regulation of genes : prokaryotes**
- 12. Expression and regulation of genes : eukaryotes**
- 13. Protein translocation and assembly**
- 14. Biosynthesis of tetrapyrroles ; lipid metabolism**

Volume IV

- 15. Carotenoids**
- 16. Photoinhibition and oxidative stress**
- 17. Water deficiency ; salt and chemical stresses**
- 18. Temperature stress**

Volume V

- 19. Enzymology of the photosynthetic metabolism**
- 20. Integration of C, N, P, S metabolisms**
- 21. Intra- and inter-cellular exchanges**
- 22. CO₂ diffusion and concentration mechanisms**
- 23. Carbon partitioning and productivity**
- 24. Ecosystems productivity and global aspects**
