Contents

1	Asymmetries and developmental stability	1
1.1	Introduction	1
1.2	Developmental homeostasis, canalisation, and stability	3
1.3	Developmental stress	4
1.4	Frequency indices of developmental stability	5
1.5	Repeated-formation indices of developmental stability	9
1.6	Types of asymmetry	14
1.7	Which asymmetries estimate developmental instability?	17
1.8	Evolutionary transitions between asymmetries	20
1.9	Why is adaptive external asymmetry not more common?	21
1.10	The measurement and statistical analysis of fluctuating asymmetry	23
1.11	Summary	35
2	Ontogeny of asymmetry and phenodeviant	37
2.1	Introduction	37
2.2	The genetics of the formation of developmental stability	39
2.3	Developmental stability and chaos theory	42
2.4	Developmental biology and the formation of symmetry and handedness	55
2.5	Fitness, phenotypic quality, and reaction norms of asymmetry	58
2.6	Ontogeny of individual asymmetry and phenodeviant: empirical studies	60
2.7	Summary	66
3	Developmental stability and mode of selection	67
3.1	Introduction	67
3.2	Canalisation and the micro-evolutionary process	68
3.3	Phenotypic and genetic variance under different modes of selection	72
3.4	Phenotypic and genetic variance: lessons from selection experiments	76
3.5	Phenotypic and genetic variance: lessons from sexual selection and other directional selection phenomena	77
3.6	Summary	84
4	Adverse environmental conditions and evolution	85
4.1	Introduction	85
4.2	Consequences of adverse environmental conditions	86

4.3	Evolutionary consequences of adverse environments	92
4.4	Adverse environmental conditions and the distribution of species	103
4.5	Adverse environmental conditions and the speciation process	104
4.6	Adverse environmental conditions and major evolutionary innovations	108
4.7	Summary	109
5	Causes of developmental instability. I. Genetic factors	111
5.1	Introduction	111
5.2	Heritability of developmental stability	112
5.3	Genetic factors	117
5.4	Summary	133
6	Causes of developmental instability. II. Environmental factors	134
6.1	Introduction	134
6.2	Stress and energetic expenditure	135
6.3	Adverse temperatures	135
6.4	Nutritional stress	137
6.5	Chemical factors	138
6.6	Population density	142
6.7	Audiogenic stress	144
6.8	Trait-specific susceptibility to environmental factors	145
6.9	Stress-specific responses	147
6.10	Environmental stress	148
6.11	Environmental monitoring by fluctuating asymmetry	150
6.12	Summary	152
7	Developmental instability and performance	154
7.1	Introduction	154
7.2	Asymmetry and performance	155
7.3	Avian asymmetry and aerodynamics	159
7.4	Experimental investigations of asymmetry	168
7.5	Asymmetry and functional importance	172
7.6	Performance costs-maintain asymmetry	175
7.7	Summary	177
8	Developmental stability and signalling	178
8.1	Introduction	178
8.2	General signalling theory	179
8.3	Origins of developmentally stable signals	182
8.4	Developmentally unstable signals	189
8.5	Sexual selection and developmental stability	194
8.6	Maintenance of developmental stability	203
8.7	Summary	205

9	Developmental stability and fitness	207
9.1	Introduction	207
9.2	Developmental stability, metabolism, and growth	209
9.3	Developmental stability and fecundity	210
9.4	Developmental stability and developmental selection	212
9.5	Developmental stability and competitive ability	217
9.6	Developmental stability and susceptibility to parasitism	220
9.7	Developmental stability, predation, and competition	223
9.8	Developmental stability and survival	226
9.9	Summary	228
	References	231
	Author index	273
	Taxonomic index	283
	Subject index	289
