

# An Econometric Model of the U.S. Copper and Aluminum Industries

How Cost Changes Affect  
Substitution and Recycling

Margaret E. Slade

Garland Publishing, Inc.  
New York & London, 1984

## TABLE OF CONTENTS

LIST OF FIGURES .....	vii
LIST OF TABLES .....	xi
ACKNOWLEDGMENTS .....	xiv
Chapter I: BACKGROUND AND INTRODUCTION .....	1
1 Changing Mineral Industry Costs .....	1
2 Estimating the Effects of Cost Changes .....	4
3 Model Overview and Study Outline .....	7
4 Limitations of the Analysis .....	12
Chapter II: ECONOMETRIC COMMODITY MODELS -- REVIEW AND COMPARISON .....	14
1 Econometric Non-Ferrous Metal-Market Models ...	14
2 Comparison With the Copper-Aluminum Substitution Model .....	21
1 The Primary Industries .....	21
2 The Secondary Industries .....	24
3 A Classification of Econometric Models of Copper and Aluminum Markets .....	28
4 The Assumptions Made in Modeling Such Markets .....	32
Chapter III: PRIMARY COPPER AND ALUMINUM .....	37
1 The Structure of the Primary Industries .....	38
1 The Relevant Market .....	38
2 Concentration .....	40
3 Barriers to Entry .....	46
2 Cost Trends in Primary Production .....	49
1 The Technology of Primary Copper and Aluminum Production .....	49
2 The Prices of the Principal Inputs to Primary Production and Their Effect on Cost .....	57
3 Natural Resource Costs -- Ore Quality Measures .....	65
4 Transport Costs .....	76
3 Estimating the Equations in the Copper and Aluminum Industry Models .....	78

4	Primary Prices -- Mechanisms and Trends .....	81
1	Definition of Alternative Behavioral Pricing Mechanisms .....	83
2	Primary Price History: 1954 to 1976 ....	88
3	Specification of a Primary Price Equation .....	93
4	Estimation of the U.S. Producer Price Equations .....	102
1	The Data .....	102
2	The Primary Price Equations .....	105
5	Primary Production .....	115
1	The Sources of Primary Supply .....	116
2	Trends in Primary Production .....	121
3	Specification of a Primary Production Equation .....	123
4	The Econometric Estimates .....	130
1	The Data .....	130
2	The Primary Production Equations ..	131
Appendix III:1	Estimating Equations With Lagged Endogenous Variables and First-Order Serially Correlated Errors .....	136
Appendix III:2	An Attempt to Measure Scarcity Rent in the Copper Industry .....	141
Appendix III:3	Non-Market Mechanisms -- Price Controls and Rationing .....	146
Chapter IV: SECONDARY COPPER AND ALUMINUM .....		150
1	The Structure of the Secondary Industries .....	151
1	Industry Description .....	151
2	Concentration and Barriers to Entry .....	154
2	Cost Trends in Secondary Production .....	157
1	Secondary Production Technology .....	157
2	Energy Usage in Secondary Production ....	159
3	Secondary Prices -- Mechanisms and Trends .....	164
1	Definition and Historic Behavior of Secondary Metal Prices .....	166
2	Specification of a Secondary-Price Equation .....	170
3	Estimation of the Secondary-Price Equations .....	175
4	Secondary Supply -- Recycling .....	178
1	Production from New Scrap .....	179
2	Production from Old Scrap .....	183

Chapter V: THE USING SECTORS .....	194
1 The Pattern of Consumption .....	194
1 Copper and Aluminum Apparent Consumption 1954 to 1976 .....	196
2 The Major Markets .....	199
2 Substitution Between Copper and Aluminum .....	204
1 Areas of Potential Substitution .....	204
2 Elasticities of Substitution .....	207
1 The Two-Level CES Production Function .....	210
2 Shiller Distributed Lags .....	214
3 The Data .....	218
4 The Elasticity of Substitution Equations .....	219
5 Comparison With Other Elasticity Estimates .....	229
6 Interpretation of the Elasticity Results .....	233
3 The Demand for Copper and Aluminum .....	235
1 Specification of a Derived Demand Equation .....	236
2 Estimation of the Derived Demand Equations .....	241
1 The Data .....	241
2 The Derived Demand Equations .....	243
Appendix V:1 Estimation Method for the Elas- ticity of Substitution Equations ...	248
Appendix V:2 Estimation Method for the Derived Demand Equations .....	251
Chapter VI: THE BALANCE BETWEEN DOMESTIC PRODUCTION AND CONSUMPTION .....	252
1 Copper and Aluminum Inventories .....	253
1 Private Inventories .....	253
2 The Government Stockpile .....	257
3 Specification of an Inventory Equation ..	259
4 Estimation of the Inventory Equations ...	261
2 Copper and Aluminum Net Imports .....	265
1 Historic Behavior of Net Imports .....	265
2 Specification of a Net-Import Equation ...	267

Chapter VII: SIMULATION, FORECASTING, AND POLICY ANALYSIS .....	269
1 Methodology -- An Overview .....	270
2 Forecasts of the Exogenous Variables .....	275
1 Box-Jenkins Forecasts .....	276
1 The Technique .....	276
2 The Forecasts .....	283
2 Energy Price Forecasts .....	287
3 Ore Quality Forecasts .....	292
3 Simulations .....	297
1 The Historic Period: 1962 to 1976 .....	297
2 The Forecast Period: 1977 to 1986 .....	302
1 Low, Intermediate, and High Energy Price Scenarios .....	302
2 A "Successful" Bauxite Cartel .....	313
3 Closure of Domestic Copper Mines Due to a Depressed World Copper Market .....	318
Chapter VIII: CONCLUSIONS AND POLICY IMPLICATIONS .....	326
1 Metal Pricing .....	327
2 Primary Production .....	331
3 Consumption and Substitution .....	335
4 Recycling .....	337
