

**ENGINEERING
HYDROLOGY
PRINCIPLES AND PRACTICES**

VICTOR MIGUEL PONCE

San Diego State University

PRENTICE HALL, Englewood Cliffs, New Jersey 07632

CONTENTS

PREFACE	xiii
1 INTRODUCTION	1
1.1 Definition of Hydrology and Engineering Hydrology	1
1.2 The Hydrologic Cycle	2
1.3 The Catchment and its Hydrologic Budget	3
1.4 Uses of Engineering Hydrology	5
1.5 Approaches to Engineering Hydrology	6
1.6 Surface Runoff, Flood Hydrology, and Catchment Scale	7
Questions	8
Problems	9
References	9
2 BASIC HYDROLOGIC PRINCIPLES	10
2.1 Precipitation	11
<i>Meteorological Aspects, 11</i>	
<i>Quantitative Description of Rainfall, 13</i>	
<i>Temporal and Spatial Variation of Precipitation, 14</i>	
<i>Storm Analysis, 22</i>	
<i>Geographic and Seasonal Variations of Precipitation, 28</i>	
<i>Precipitation Data Sources and Interpretation, 30</i>	

- 2.2 Hydrologic Abstractions 33
 - Interception, 33*
 - Infiltration, 34*
 - Surface or Depression Storage, 38*
 - Evaporation, 39*
 - Evapotranspiration, 47*
- 2.3 Catchment Properties 54
 - Catchment Area, 55*
 - Catchment Shape, 55*
 - Catchment Relief, 56*
 - Linear Measures, 60*
 - Drainage Patterns, 62*
- 2.4 Runoff 62
 - Runoff Components, 64*
 - Stream Types and Baseflow, 64*
 - Antecedent Moisture, 65*
 - Rainfall-Runoff Relations, 65*
 - Runoff Concentration, 66*
 - Runoff Diffusion and Streamflow Hydrographs, 70*
 - Flow in Stream Channels, 74*
 - Streamflow Variability, 78*

Questions 84

Problems 85

References 90

3 HYDROLOGIC MEASUREMENTS

94

- 3.1 Precipitation Measurements 94
 - Errors in Measuring Precipitation Data, 96*
 - Precipitation Measurements Using Telemetry, 97*
 - Precipitation Measurements Using Radar, 97*
- 3.2 Snowpack Measurements 99
 - Snow Courses, 100*
 - Radioisotope Snow Measurements, 101*
 - Determination of Catchment Water Equivalent, 101*
 - Sources of Snow Survey Data, 101*
- 3.3 Evaporation and Evapotranspiration Measurements 102
 - NWS Class A Pan, 102*
 - Evapotranspirometers, 103*
 - Lysimeters, 104*
- 3.4 Infiltration and Soil-Moisture Measurements 104
 - Infiltrimeters, 104*
 - Infiltration Rates from Rainfall-Runoff Data, 105*
 - Measurements of Soil Moisture, 106*
- 3.5 Streamflow Measurements 107
 - Stage Measurements, 107*

Discharge Measurements, 109
Indirect Determination of Peak Discharge:
The Slope-Area Method, 112

Questions 114

Problems 115

References 116

4 HYDROLOGY OF SMALL CATCHMENTS

118

4.1 Rational Method 119

Methodology, 120

Theory of the Rational Method, 124

Further Developments, 127

Applications of the Rational Method, 127

4.2 Overland Flow 134

Overland Flow Theory, 135

Overland Flow Solution Based on Storage Concept, 138

Overland Flow Solution Based on Kinematic Wave Theory, 141

Overland Flow Solution Based on Diffusion Wave Theory, 146

Questions 148

Problems 148

References 151

5 HYDROLOGY OF MIDSIZE CATCHMENTS

153

5.1 Runoff Curve Number Method 155

Runoff Curve Number Equation, 156

Estimation of Runoff Curve Numbers
from Tables, 157

Estimation of Runoff Curve Numbers
from Measured Data, 160

Assessment of Runoff Curve Number Method, 164

5.2 Unit Hydrograph Techniques 167

Development of Unit Hydrographs:

Direct Method, 170

Development of Unit Hydrographs:

Indirect Method, 174

Snyder's Synthetic Unit Hydrograph, 175

SCS Synthetic Unit Hydrograph, 179

Other Synthetic Unit Hydrographs, 182

Change in Unit Hydrograph Duration, 182

Convolution and Composite Hydrographs, 185

Unit Hydrographs from Complex Storms, 186

5.3 SCS TR-55 Method 188

TR-55 Storm, Catchment, and Runoff Parameters, 188

TR-55 Procedures, 189

Selection of Runoff Curve Number, 189
Travel Time and Concentration Time, 191
TR-55 Graphical Method, 192
Assessment of TR-55 Graphical Method, 195

Questions 198

Problems 199

References 203

Suggested Readings 204

6 FREQUENCY ANALYSIS

205

- 6.1 Concepts of Statistics and Probability 206
Properties of Statistical Distributions, 207
Continuous Probability Distributions, 210
- 6.2 Flood Frequency Analysis 213
Selection of Data Series, 213
Return Period, Frequency, and Risk, 214
Plotting Positions, 214
Curve Fitting, 216
Frequency Factors, 217
Log Pearson III Method, 217
Gumbel's Extreme Value Type I Method, 223
Comparison Between Flood Frequency Methods, 226
- 6.3 Low-flow Frequency Analysis 227
- Questions 229
- Problems 230
- References 231
- Suggested Readings 232

7 REGIONAL ANALYSIS

233

- 7.1 Joint Probability Distributions 233
Marginal Probability Distributions, 234
Conditional Probability, 235
Bivariate Normal Distribution, 238
- 7.2 Regression Analysis 238
One-Predictor-Variable Regression, 239
Multiple Regression, 241
- 7.3 Regional Analysis of Flood and Rainfall Characteristics 243
Peak Flow Based on Catchment Area, 243

Index-Flood Method, 244
Rainfall Intensity-Duration-Frequency, 246

Questions 248

Problems 248

References 250

8 RESERVOIR ROUTING

252

8.1 Storage Routing 253

Storage-Outflow Relations, 254

8.2 Linear Reservoir Routing 256

8.3 Storage Indication Method 260

8.4 Reservoir Routing with Controlled Outflow 263

Questions 265

Problems 265

References 269

9 STREAM CHANNEL ROUTING

270

9.1 Muskingum Method 271

9.2 Kinematic Waves 277

Kinematic Wave Equation, 277

Discretization of Kinematic Wave Equation, 280

Kinematic Wave Celerity, 285

Kinematic Waves with Lateral Inflow, 287

Applicability of Kinematic Waves, 287

9.3 Diffusion Waves 288

Diffusion Wave Equation, 288

Applicability of Diffusion Waves, 291

9.4 Muskingum-Cunge Method 291

Resolution Requirements, 296

Nonlinear Muskingum-Cunge Method, 297

Assessment of Muskingum-Cunge Method, 297

9.5 Introduction to Dynamic Waves 298

Relevance of Dynamic Waves to Engineering

Hydrology, 299

Diffusion Wave Solution with Dynamic Component, 300

Questions 301

Problems 302

References 304

Suggested Readings 305

- 10.1 Time-area Method 307
- 10.2 Clark Unit Hydrograph 311
- 10.3 Cascade of Linear Reservoirs 313
- 10.4 Catchment Routing with Kinematic Waves 317
*Two-Plane Linear Kinematic Catchment
Routing Model, 318*
- 10.5 Catchment Routing with Diffusion Waves 322
*Two-Plane Linear Diffusion Catchment
Routing Model, 322*
- 10.6 Assessment of Catchment-Routing Techniques 325
 - Questions 327
 - Problems 327
 - References 330
 - Suggested Readings 331

11 SUBSURFACE WATER

- 11.1 General Properties of Subsurface Water 333
*Extent of Groundwater Resources, 333
Aquifers, 334*
- 11.2 Physical Properties of Subsurface Water 336
*Specific Yield, 337
Soil Moisture Levels, 337
Flow Through Porous Media, 338*
- 11.3 Equations of Groundwater Flow 343
*Steady-State Saturated Flow, 343
Transient Saturated Flow, 343*
- 11.4 Well Hydraulics 344
*Radial Flow to a Well, 344
Theis Solution, 346*
- 11.5 Surface-Subsurface Flow Interaction 349
*Hillslope Hydrology and Streamflow
Generation, 350
Hydrograph Separation and Baseflow
Recession, 351*
 - Questions 355
 - Problems 357
 - References 358
 - Suggested Readings 359

- 12.1 Snow Formation and Accumulation 361
 - Snow Formation, 361*
 - Snow Accumulation, 362*
 - Distribution of Snowcover, 363*
- 12.2 Melting of the Snowpack 364
 - Snowpack Energy Balance, 365*
 - Solar Radiation, 366*
 - Snowmelt Computations, 370*
- 12.3 Snowmelt Indexes 374
 - General Equation for Snowmelt Runoff in Terms of Indexes, 376*
 - Temperature Indexes, 377*
 - Generalized Basin Snowmelt Equations, 378*
- 12.4 Effect of Snowpack Condition on Runoff 379
 - Character of the Snowpack, 379*
 - Liquid Water in the Snowpack, 380*
 - Metamorphism of the Snowpack, 380*
- 12.5 Snowmelt Hydrograph Synthesis 382
 - Elevation Effects, 382*
 - Effect of Melt Period, 383*
 - Rain-on-Snow Hydrographs, 383*
 - Spring Snowmelt Runoff Hydrographs, 383*
 - Time Distribution of Runoff, 385*
- Questions 386
- Problems 386
- References 387
- Suggested Readings 388

13 CATCHMENT MODELING

- 13.1 Classification of Catchment Models 390
 - Material versus Formal Models, 390*
 - Types of Mathematical Catchment Models, 390*
 - Linear versus Nonlinear Models, 392*
 - Time-invariant versus Time-variant Models, 393*
 - Lumped versus Distributed Models, 393*
 - Continuous versus Discrete Models, 393*
 - Analytical versus Numerical Models, 394*
 - Event-driven versus Continuous-process Models, 394*
- 13.2 Model Components and Model Construction 395
 - Precipitation, 395*
 - Hydrologic Abstractions, 400*
 - Runoff, 402*
 - Model Construction and Application, 403*

- 13.3 Model Calibration and Verification 403
Calibration and Verification, 404
Sensitivity Analysis, 405
- 13.4 Catchment Models 406
HEC-1, 406
TR-20, 413
SWMM, 416
SSARR, 420
Stanford Watershed Model (SWM), 431
Sacramento Model, 442
- Questions 447
- Problems 449
- References 449
- Suggested Readings 451

14 HYDROLOGIC DESIGN CRITERIA

452

- 14.1 NOAA National Weather Service 453
Probable Maximum Precipitation, 453
NWS Depth-Area Reduction Criteria, 475
- 14.2 U.S. Army Corps of Engineers 477
Standard Project Flood Determinations, 477
- 14.3 USDA Soil Conservation Service 482
Spillway Design Criteria, 482
Design Criteria for Principal Spillways, 484
Design Criteria for Emergency Spillways, 493
Special Procedures for Large Areas, 493
- 14.4 U.S. Bureau of Reclamation 497
USBR Synthetic Unit Hydrographs, 497
USBR Synthetic Unit Hydrograph Parameters, 499
USBR Dimensionless Unit Hydrographs, 501
Flood Hydrograph Development, 505
- 14.5 Tennessee Valley Authority 506
PMP and TVA Precipitation, 507
TVA Procedures for PMF Determinations, 517
- 14.6 U.S. Geological Survey 519
USGS State Equations for Flood-peak Estimation
at Ungaged Sites, 519
- Questions 526
- Problems 527
- References 528
- Suggested Readings 530

- 15.1 Sediment Properties 532
Sediment Formation, 532
Particle Characteristics, 532
Size Distribution of Sediment Deposits, 535
Specific Weight of Sediment Deposits, 536
- 15.2 Sediment Production 537
Normal and Accelerated Erosion, 538
Sediment Sources, 538
Upland Erosion and the Universal Soil Loss Equation, 538
Channel Erosion, 543
*Accelerated Erosion Due to Strip-mining
and Construction Activities, 545*
Sediment Yield, 545
Sediment-delivery Ratio, 545
Empirical Formulas for Sediment Yield, 547
- 15.3 Sediment Transport 548
Sediment Transport Mechanics, 549
Sediment Transport Prediction, 556
Sediment Rating Curves, 565
Sediment Routing, 565
- 15.4 Sediment Deposition in Reservoirs 565
Reservoir Trap Efficiency, 566
Reservoir Design Life, 567
Distribution of Sediment Deposits, 568
Sediment-retention, or Debris, Basins, 568
- 15.5 Sediment Measurement Techniques 569
Sediment-sampling Equipment, 569
Suspended-sediment Discharge Measurements, 572
- Questions 573
- Problems 573
- References 575
- Suggested Readings 577

APPENDICES

- A: Tables 579
- B: Derivation of the Numerical Diffusion Coefficient of the Muskingum-Cunge Method 586
- C: U.S. Geological Survey Flood Hydrology Reports 589
- D: Computer Programs Documentation and Listing 596
