

Introductory Dynamical Oceanography

SECOND EDITION

by

STEPHEN POND, B.Sc., Ph.D.

Professor

and

GEORGE L. PICKARD, M.A., D.Phil., F.R.S.C.

*Emeritus Professor and former Director, Department of Oceanography,
University of British Columbia, Vancouver, Canada*

PERGAMON PRESS

OXFORD · NEW YORK · TORONTO · SYDNEY · PARIS · FRANKFURT

Contents

List of Main Symbols used in Text	xv
Acknowledgements	xx
1. Introduction	1
2. Properties of Sea Water relevant to Physical Oceanography	5
2.1 Introduction	5
2.2 Density	6
2.21 Measurement of density, temperature and salinity	7
2.22 Relative density, σ_t and specific volume	7
2.23 Density and specific volume as functions of temperature, salinity and pressure	9
3. The Basic Physical Laws used in Oceanography and Classifications of Forces and Motions in the Sea	12
3.1 Basic laws	12
3.2 Classifications of forces and motions	13
4. The Equation of Continuity of Volume	16
4.1 The concept of continuity of volume	16
4.2 The derivation of the equation of continuity of volume	18
4.3 An application of the equation of continuity	20
5. Stability and Double Diffusion	24
5.1 Static stability	24
5.11 Criterion for static stability (E)	25
5.12 Numerical values for stability	27
5.13 Buoyancy frequency (N)	30
5.2 Double diffusion	30
5.3 Dynamic stability	31
	ix

11.4	Descriptions of some models of individual oceans	182
11.41	O'Brien's two-dimensional wind-driven model of the North Pacific (1971)	183
11.42	Cox's model of the Indian Ocean (1970)	185
11.43	Holland and Hirschman's model of the Atlantic Ocean (1972)	189
11.5	Two models of the circulation of the world ocean	194
11.6	Models with mesoscale eddies	198
11.7	Comments on the numerical model solutions	204
12.	Waves	207
12.1	Introduction	207
12.2	Some general characteristics of waves	209
12.3	Small amplitude waves	211
12.31	Pure waves (single frequency)	211
12.32	Groups of waves; group speed; dispersion	214
12.33	Estimating the distance to a wave generation region	216
12.34	Orbital motion of water particles and wave pressure	217
12.35	Wave energy and momentum	219
12.4	Finite amplitude effects	219
12.5	Refraction and breaking in shallow water; diffraction	221
12.51	Refraction	221
12.52	Wave breaking	223
12.53	Diffraction	224
12.6	Measurement of waves	224
12.61	Methods	224
12.62	Real waves	226
12.7	The generation of wind waves; practical wave analysis and forecasting	227
12.71	General	227
12.72	Wave generation by the wind—physical processes	228
12.73	Wave generation by the wind—empirical relations	231
12.8	Tsunamis or seismic sea waves	235
12.9	Internal waves	236
12.91	Interfacial waves in a two-layer ocean	236
12.92	Internal waves when the density varies continuously with depth	239
12.93	Normal modes for internal waves	243
12.94	Causes of internal waves	245
12.10	Effects of rotation	246
12.10.1	Introduction	246
12.10.2	Modified gravity waves; Sverdrup and Poincaré waves	246
12.10.3	Kelvin waves	248
12.10.4	Planetary or Rossby waves	249
12.10.5	Topographic effects	251
13.	Tides	253
13.1	Introduction	253
13.2	The tide-producing forces	254

13.21	The origin of the tide-producing forces	254
13.22	Components of the tide-producing forces	259
13.3	Ocean responses to the tide-producing forces—tidal theories	259
13.31	The equilibrium theory of the tides	260
13.32	The dynamical theory of the tides	261
13.4	The practical approach to tidal analysis and prediction	261
13.41	Harmonic analysis—the classical method	261
13.42	Fourier analysis—the response method	263
13.5	The measurement of tides	264
13.6	Tides in typical ocean regions	265
13.61	Tides at the coast	265
13.62	Tides in estuaries	267
13.63	Tides in bays—resonance	269
13.64	Tides of the open ocean	273
13.7	Tidal currents	276
13.8	Internal tides	277
13.9	Tidal friction and the moon's motion	280
13.10	Storm surges	280
13.11	Epilogue	281
14. Some Presently Active and Future Work		282
Appendix 1. Mathematical Review with Some Elementary Fluid Mechanics		287
A.1.1	Introduction	287
A.1.2	Scalars and vectors	287
A.1.3	Derivatives	288
A.1.3.1	The total (or individual) derivative	288
A.1.3.2	The total derivative—a physical picture	290
A.1.4	Integrals	292
A.1.5	Fields	292
A.1.6	Descriptions of fluid flow	293
A.1.7	Convergences and divergences	294
A.1.8	Hydrostatic or sea pressure	296
A.1.9	Slope effects	297
A.1.10	Compressibility	299
A.1.11	Equation of state	299
A.1.12	Centripetal and centrifugal forces	301
Appendix 2. Units Used in Physical Oceanography		302
A.2.1	Introduction	302
A.2.2	Base units	302
A.2.3	Derived and temporary units	302
A.2.4	Units used in dynamical oceanography and some numerical values	304

Appendix 3. Sources of Information for the Estimation of Specific Volume and Density from Values of Salinity, Temperature and Pressure	308
A.3.1 The table method	308
A.3.2 International Equation of State of Sea Water, 1980	310
Bibliography	312
B.1 Introduction	312
B.2 Suggestions for further reading	312
B.2.1 Texts	312
B.2.2 Journals	315
B.3 Sources of data	315
B.3.1 Salinity defined in terms of chlorinity: Knudsen–Ekman equation of state	315
B.3.2 Practical Salinity Scale 1978 and International Equation of State 1980	316
B.4 Journal references	316
Index	321
