Wolf R. Vieth

Membrane Systems: Analysis and Design

Applications in Biotechnology, Biomedicine and Polymer Science

with 146 Figures and 37 Tables

Hanser Publishers, Munich Vienna New York

Distributed in the United States of America by
Oxford University Press, New York
and in Canada by
Oxford University Press, Canada

CONTENTS

1	**Introduction**	
1.0	General	1
1.1	Transient Studies	3
1.2	Microheterogeneity in Membranes	4
1.3	Biosensors and Enzyme Catalysis	5
1.4	Biocatalysts and Bioreactors	6
1.5	Chemical Messengers	6
1.6	References	7
2	**Diffusion and Reaction in Microheterogeneous Synthetic Membranes**	
2.0	Rubbery Polymer Membranes	9
2.1	Penetrant Localization	9
2.2	Glassy Polymers and Dual Mode Transport	15
2.3	Diffusion Mechanisms	20
2.4	Time Lag Method	23
2.5	Counterdiffusion Permeability	25
2.6	Formulation of Unsteady State Binary Diffusion	27
2.7	Simulation Results	31
2.8	Experimental Results	33
2.9	The Change of Langmuirian Fluxes	35
2.10	The Change of Concentrations and Flux Compensation	37
2.11	Effective Diffusivities in Mixed Gas Diffusion	38
2.12	Nomenclature	46
2.13	References	48
3	**Applications of Membrane Diffusion-Reaction Principles**	
3.0	Introduction	51
3.1	Nonequilibrium Molecular Characteristics of Glassy Polymers	51
3.2	Transport Effects	54
3.3	History-Dependent Sorption and Transport Behavior	57
3.4	Molecular Characterization and History-Dependent and Time-Dependent Molecular States	59
3.5	Sorption and Transport Behavior in Conditioned Glassy Polymers	60

3.6	Permselectivity of Cellulose Acetate Membranes	66
3.7	Dual Sorption Theory Applied to Reverse Osmosis Transport	66
3.8	Concentration-Dependent Transport of Gases and Vapors in Glassy Polymers	73
3.9	Monomer Localization	74
3.10	Controlled Release	75
3.11	Macromolecular Diffusion Through Collagen Membranes	76
3.12	Enzyme Immobilization by Adsorption	77
3.13	Facilitated Transport	78
3.14	Modeling Gas Transport in Packaging Applications	79
3.15	Perspective on Membrane Separations Process Principles and Scale-Up Parameters	83
3.16	References	89
4	**Membrane Biosensors**	
4.0	Introduction	93
4.1	Biosensor Membranes for Analysis	93
4.2	Types of Biosensor Membranes (BM)	94
4.3	Biosensor Structure and the Method of Immobilization	102
4.4	Introduction to Response Characteristics	108
4.5	Application Characteristics of Biosensor Membranes	113
4.6	Effect of a First Order Reaction on the Penetrant Time Lag in a Membrane Biosensor	117
4.7	Spatial Distribution of Biocatalyst	119
4.8	Anisotropic Enzyme Distribution	123
4.9	Theoretical Model for Anisotropic Enzyme Membranes	124
4.10	References	128
5	**Enzyme and Cell-Based Reactors**	
5.0	Bioreactors	131
5.1	Reactors with Porous Annular Catalytic Walls	132
5.2	Comparison of Relative Potencies of Several Reactor Designs	135
5.3	Models for Kinetically Controlled Reactions	142
5.4	Cell-Based Reactors	145
5.5	Single Enzyme Type IMC Reactors	146
5.6	Effect of Mass Transfer on the Performance of Immobilized Cell Reactors	147
5.7	Immobilized Living Cell Systems	149
5.8	Analysis of Live Cell Reactors	150
5.9	Idealized Reactor Performance Equations	151

5.10	Concept of a Dual Colony or Hybrid Reactor	155
5.11	Mass Transfer Considerations	158
5.12	Substrate Transport into the Immobilized Cells	158
5.13	Membrane Bioreactor-Separators and Collagen Technology	161
5.14	Simultaneous Reaction and Separation in a Membrane Bioreactor	163
5.15	Experimental Strategies and Trends	168
5.16	Process Feasibility	173
5.17	Nomenclature	173
5.18	References	176
6	**Reaction-Transport Coupling in Anaerobic Digestion: Self-Immobilized Cultures**	
6.0	Introduction	179
6.1	Carbon Flow Inside the Cell	180
6.2	Maintenance Energy	181
6.3	Schematic Description of the Model	183
6.4	Reactor Set Up	185
6.5	Model Equations	185
6.6	Hysteresis Due to Structure of the Beads	187
6.7	Description of the Reactor Dynamics	188
6.8	Model Discrimination	191
6.9	Parameter Estimation	196
6.10	Model Predictions	203
6.11	Recapitulation	205
6.12	Analytical Hierarchies for Consideration of Microstructural Effects	206
6.13	References	207
7	**Role of Intracellular Chemical Messenger Transport in Enzyme Biosynthesis**	
7.0	Introduction	209
7.1	Biosynthesis of Glucose Isomerase	211
7.2	Inducible Enzyme Biosynthesis: Lactose Induction of ß-Galactosidase in *E. Coli*	212
7.3	Regulation of Enzyme Biosynthesis	214
7.4	Modeling the Transport of ß-Galactosides Across the Plasma Membrane	216
7.5	Model Verification and Discussion	222
7.6	Implicit Inclusion of Membrane Potential in the Transport Model	224

7.7	Inducer Transport in Fermentation	227
7.8	Genetic Regulation	231
7.9	Model Elements	234
7.10	Inducer Transport in Chemostat Culture	237
7.11	Catabolite Repression	238
7.12	Kinetics of CMF Synthesis	240
7.13	PTS Mediated Regulation of Intracellular cAMP and Lactose Transport	242
7.14	Regulation of Adenylate Cyclase Activity	243
7.15	Inducer Exclusion	245
7.16	Model Verification	246
7.17	Parameter Estimation	247
7.18	Steady State Response in Chemostat Cultures	249
7.19	Inducer Transport Effects	252
7.20	Transient Response in Chemostat Cultures	255
7.21	Nomenclature	260
7.22	References	261

8 Inducible Recombinant Cell Cultures and Bioreactors

8.0	Introduction	265
8.1	Strain Development	266
8.2	Fraction of Plasmid Containing Cells	269
8.3	Plasmid Copy Number Determination	270
8.4	Immobilized Cell Concentration	271
8.5	Continuous Free Cell Bioreactor Studies	272
8.6	IMRC Bioreactor	274
8.7	IMRC Bioreactor Studies	276
8.8	Recapitulation of the Gene Expression System	278
8.9	Bioreactor Model	281
8.10	Steady State IMRC Bioreactor Dynamics with Selection Pressure	286
8.11	Analysis and Discussion	287
8.12	Nomenclature	296
8.13	References	297

9 Intercellular Chemical Messenger Transport and Synaptic Response

9.0	Introduction	299
9.1	Chemical Messenger Binding and Transport in Reconstituted Biomembrane Structures	299
9.2	Collagen Microstructure	300

9.3 Transport Studies 301
9.4 Purification and Reconstitution of Vesicles from Torpedo Fish 303
9.5 Carbamylcholine-Induced $^{22}Na^{+}$ and AChI Uptakes of Reconstituted Vesicles 303
9.6 Isotherm Resolution 304
9.7 Vesicles 308
9.8 Effective Diffusivity and Ligand Binding Effects 310
9.9 Membrane Laminate Model of the Neuromuscular Junction 310
9.10 Cholinergic Receptors Involved in Synaptic Transmission 315
9.11 Membrane Transport/Reaction Processes at the Nerve-Muscle Junction: Nonequilibrium Model 317
9.12 Diffusion/Enzyme Kinetic Model 318
9.13 Consideration of Other Geometries 320
9.14 Endplate Potential: Excitation and Conduction of Impulses in Nerves 321
9.15 Partial Reaction Rate Control 323
9.16 Extension to Pulse Currents 328
9.17 Simple Analysis of Oscillatory Behavior 329
9.18 References 332

10 Mammalian Excitable Membranes
10.0 Introduction 335
10.1 Ion Channels and Autonomic Receptors of Cardiac Purkinje Fiber 336
10.2 Ion Channels and Autonomic Receptors of SA Node 337
10.3 ß-Adrenergic Influence on Nomotopic Automaticity 341
10.4 Photoreceptors 342
10.5 Brain Receptors 344
10.6 Concluding Remarks 347
10.7 References 348
