Milan Montreal New Delhi Santiago Seoul Singapore Sydney Taipei Toronto

# brief contents

1 Introduction to Genetics 1

## part one

### Patterns and Mechanisms of Classical Inheritance

2 Mendelian Genetics 21
3 Mitosis and Meiosis 41
4 Sex Linkage and Pedigree Analysis 68
5 Modifications to Mendelian Patterns of Inheritance 95
6 Linkage and Mapping in Eukaryotes 122

## part two

### Molecular Basis of Inheritance and Gene Expression

7 DNA Structure and Chromosome Organization 166
8 Changes in Chromosome Structure and Number 198
9 DNA Replication 232
10 Gene Expression: Transcription 262
11 Gene Expression: Translation 308

## part three

### DNA Technologies

12 Recombinant DNA Technology 351
13 Application of Recombinant DNA Technology 393
14 Genomics and Bioinformatics 432

## part four

### Control of Gene Expression

15 Genetics of Bacteria and Bacteriophages 476
16 Gene Expression: Control in Bacteria and Phages 521
17 Gene Expression: Control in Eukaryotes 563
18 DNA Mutation, Repair, and Transposition 609
19 Extranuclear Inheritance 656
20 Mutational Analysis 684

## part five

### Genetics and Biological Processes

21 Developmental Genetics 726
22 Cancer Genetics 763

## part six

### Population Genetics and Evolution

23 Population Genetics 790
24 Quantitative Genetics 819
25 Evolutionary Genetics 849

# contents

Preface xi
Guided Tour xvii

**1** Introduction to Genetics 1

**1.1** A Brief Overview of the Modern History of Genetics 2
**1.2** The Three General Areas of Genetics 5
**1.3** Why Fruit Flies and Colon Bacteria? 12

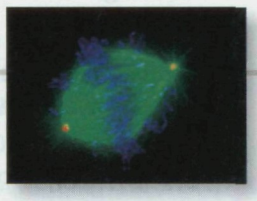
**BOX 1.1** Applying Genetic Principles to Problems: *Lysenko, Government, and Failed Genetics* 13

**1.4** Application of Genetics to the Human Population 17

**Genetic Linkages** 19

Chapter Summary Questions 20

## part one



## Patterns and Mechanisms of Classical Inheritance

**2** Mendelian Genetics 21

**2.1** Mendel's Experiments 22
**2.2** Segregation 25
**2.3** Independent Assortment 27
**2.4** Genetic Symbol Conventions 29
**2.5** Probability 31

**BOX 2.1** Applying Genetic Principles to Problems: *Calculating Probabilities from Complex Genotypes* 33

**2.6** Statistics 34

**Genetic Linkages** 37

Chapter Summary Questions 37
Solved Problems 38
Exercises and Problems 38

**3** Mitosis and Meiosis 41

**3.1** Cell Structure and Function 42
**3.2** Chromosomes 43
**3.3** The Cell Cycle and Its Control Mechanisms 45
**3.4** Mitosis 47
**3.5** Meiosis 52
**3.6** Comparison Between Mitosis and Meiosis 57

**BOX 3.1** Applying Genetic Principles to Problems: *The Relationship Between Meiosis and Mendel's Laws* 59

**3.7** Meiosis in Mammals 60
**3.8** Life Cycles 61
**3.9** Chromosomal Theory of Inheritance 63

**Genetic Linkages** 63

Chapter Summary Questions 64
Solved Problems 64
Exercises and Problems 65

**4** Sex Linkage and Pedigree Analysis 68

**4.1** Sex Linkage 69
**4.2** Proof of the Chromosomal Theory of Inheritance 71
**4.3** Sex Determination 75
**4.4** Gene Balance 80
**4.5** Pedigree Analysis 82

**BOX 4.1** Applying Genetic Principles to Problems: *Calculating Genotypic Probabilities from Pedigrees* 87

**Genetic Linkages** 88

Chapter Summary Questions 89
Solved Problems 89
Exercises and Problems 90

## 5 Modifications to Mendelian Patterns of Inheritance 95

**5.1** Variations on Dominance 96
**5.2** Multiple Alleles 98
**5.3** Testing Allelism 100
**5.4** Lethal Alleles 102
**5.5** Penetrance and Expressivity 103

**BOX 5.1** Applying Genetic Principles to Problems: *Using Incomplete Penetrance Data in a Pedigree* 105

**5.6** Genotypic Interactions 106
**5.7** Epigenetics 113

**BOX 5.2** Applying Genetic Principles to Problems: *Deducing Single-Gene Versus Two-Gene Inheritance Mechanisms Based on Phenotypic Ratios* 114

**Genetic Linkages** 116

Chapter Summary Questions 116
Solved Problems 117
Exercises and Problems 118

## 6 Linkage and Mapping in Eukaryotes 122

**6.1** Linkage, Crossing Over, and Recombination: An Overview 123
**6.2** Diploid Mapping 128

**BOX 6.1** Applying Genetic Principles to Problems: *Generating a Recombination Map from Three-Point Testcross Data* 134

**BOX 6.2** Applying Genetic Principles to Problems: *Calculating Recombination Frequencies from a Linkage Map* 136

**6.3** Mapping DNA Sequences 137

**BOX 6.3** Applying Genetic Principles to Problems: *Using Linked DNA Markers to Calculate Genotypic Probabilities* 138

**6.4** Haploid Mapping (Tetrad Analysis) 139
**6.5** The Mechanism Of Recombination 146
**6.6** Additional Recombination Events 149
**6.7** Human Chromosomal Maps 151

**Genetic Linkages** 155

Chapter Summary Questions 158
Solved Problems 158
Exercises and Problems 159

# part two

# Molecular Basis of Inheritance and Gene Expression

## 7 DNA Structure and Chromosome Organization 166

**7.1** Required Properties of a Genetic Material 167
**7.2** Evidence for DNA as the Genetic Material 169
**7.3** Chemistry of Nucleic Acids 173

**BOX 7.1** Applying Genetic Principles to Problems: *Analysis of the Genetic Material in Prions* 174

**7.4** The Eukaryotic Cell 181
**7.5** The Eukaryotic Chromosome 181

**Genetic Linkages** 195

Chapter Summary Questions 195
Solved Problems 196
Exercises and Problems 196

## 8 Changes in Chromosome Structure and Number 198

**8.1** Variation in Chromosome Structure: An Overview 199
**8.2** Deletions 201
**8.3** Inversions 204

**BOX 8.1** Applying Genetic Principles to Problems: *Deletion Mapping of Recessive Alleles* 206

**8.4** Translocations 209
**8.5** Centromeric Breaks 211
**8.6** Duplications 213
**8.7** Variation in Chromosome Number: An Overview 215
**8.8** Aneuploidy 216
**8.9** Changes in Euploidy 223

**Genetic Linkages** 226

Chapter Summary Questions 227
Solved Problems 227
Exercises and Problems 228

**9 DNA Replication 232**

9.1 The Mechanism of DNA Synthesis 233

**BOX 9.1** Applying Genetic Principles to Problems: *The Application of Reasoning to Solve the Structure of DNA* 238

9.2 The Process of Strand Synthesis 240

9.3 The Point of Origin of DNA Replication 246

9.4 Termination of Replication 253

9.5 Other Replication Structures 254

9.6 Eukaryotic DNA Replication 255

**Genetic Linkages** 258

Chapter Summary Questions 259

Solved Problems 259

Exercises and Problems 260

**10 Gene Expression: Transcription 262**

10.1 Types of RNA 263

10.2 Bacterial Transcription: Preliminaries 264

10.3 Prokaryotic Transcription: The Process 267

10.4 Ribosomes and Ribosomal RNA 273

10.5 Transfer RNA 275

10.6 Eukaryotic Transcription 278

10.7 Posttranscriptional Modifications in Eukaryotes 286

**BOX 10.1** Applying Genetic Principles to Problems: *Determining Which Eukaryotic RNA Polymerase Transcribes a Gene* 288

10.8 MicroRNA 301

10.9 Update: The Flow of Genetic Information 302

**Genetic Linkages** 303

Chapter Summary Questions 304

Solved Problems 304

Exercises and Problems 305

**11 Gene Expression: Translation 308**

11.1 The One-Gene/One-Enzyme Hypothesis 309

11.2 Protein Structure 311

11.3 The Colinearity of mRNA and Protein Sequences 315

11.4 Translation: Preliminaries 316

11.5 Translation: The Process 319

11.6 Posttranslational Changes to Polypeptide Chains 334

11.7 The Genetic Code 335

**BOX 11.1** Applying Genetic Principles to Problems: *Reverse Translation from Amino Acid Sequence to Deduced Nucleotide Sequence* 344

**Genetic Linkages** 346

Chapter Summary Questions 347

Solved Problems 347

Exercises and Problems 348

**part three**

**DNA Technologies**

**12 Recombinant DNA Technology 351**

12.1 Cloning DNA 352

12.2 DNA Libraries 362

12.3 Identifying and Isolating Specific Sequences 366

12.4 Restriction Mapping 372

**BOX 12.1** Applying Genetic Principles to Problems: *Determining a Restriction Map* 377

12.5 DNA Sequencing 380

**Genetic Linkages** 386

Chapter Summary Questions 386

Solved Problems 387

Exercises and Problems 388

**13 Application of Recombinant DNA Technology 393**

13.1 Mapping Mutations in Eukaryotes 394

13.2 Cloning Eukaryotic Genes 401

**BOX 13.1** Applying Genetic Principles to Problems: *Performing a Genomic Walk* 403

13.3 Eukaryotic Vectors 407

13.4 Site-Specific Mutagenesis 414

13.5 Introducing Foreign DNA into Cells 415

13.6 Mouse Genetics 416

13.7 Human Gene Therapy 421

13.8 Cloned Organisms 423

13.9 Practical Benefits from Gene Cloning 424

13.10 Ethical Considerations 425

**Genetic Linkages** 426

Chapter Summary Questions 427

Solved Problems 427

Exercises And Problems 428

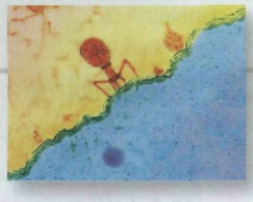
## 14 Genomics and Bioinformatics 432

**14.1** Approaches to Sequencing a Genome 433
**14.2** Correlating Various Maps 441
**14.3** Annotating the Genomic Sequence 445
**14.4** Transcriptomics 450
**14.5** Proteomics 458
**14.6** Ethical Considerations 466

**Genetic Linkages** 467

Chapter Summary Questions 467
Solved Problems 468
Exercises and Problems 471

# part four



# Control of Gene Expression

## 15 Genetics of Bacteria and Bacteriophages 476

**15.1** Bacteria and Bacteriophages in Genetic Research 477
**15.2** Morphological Characteristics 477
**15.3** Techniques of Cultivation 478
**15.4** Bacterial Phenotypes 480
**15.5** Bacteriophage Life Cycles and Phenotypes 482
**15.6** Overview of Sexual Processes in Bacteria 484
**15.7** Transformation 484
**15.8** Conjugation 487
**15.9** Transduction 497

**BOX 15.1** **Applying Genetic Principles to Problems:** ***Distinguishing Between Mapping Through Conjugation and Transduction*** 502

**15.10** Phage Genetics 504

**Genetic Linkages** 512

Chapter Summary Questions 513
Solved Problems 513
Exercises and Problems 515

## 16 Gene Expression: Control in Bacteria and Phages 521

**16.1** The Operon Model 522
**16.2** The Lactose Operon (Inducible System) 525
**16.3** Catabolite Repression 532

**BOX 16.1** **Applying Genetic Principles to Problems:** ***Deducing Expression of* lac *Structural Genes in Complex Merozygotes*** 533

**16.4** The Arabinose Operon 535
**16.5** The Tryptophan Operon (Repressible System) 537
**16.6** The Tryptophan Operon (Attenuator-Controlled System) 537
**16.7** Lytic and Lysogenic Cycles in Phage λ 543
**16.8** Other Transcriptional Control Systems 550
**16.9** Translational Control 551
**16.10** Posttranslational Control 555

**Genetic Linkages** 557

Chapter Summary Questions 557
Solved Problems 558
Exercises and Problems 559

## 17 Gene Expression: Control in Eukaryotes 563

**17.1** The *cis* Regulatory Elements: Control of RNA Polymerase II Action 564
**17.2** The *trans* Regulatory Elements: Proteins 572
**17.3** The *trans* Regulatory Elements: RNAs 576
**17.4** Example of a Complex Regulatory Network: The Dorsal Protein 579
**17.5** The Role of Chromatin in Gene Regulation 581
**17.6** Methylation of DNA 586

**BOX 17.1** **Applying Genetic Principles to Problems:** ***Determining the Pattern of DNA Methylation*** 588

**17.7** Imprinting 589
**17.8** Posttranscriptional Regulation 591
**17.9** Translational Control 595
**17.10** Posttranslational Control 596
**17.11** Interaction of Multiple Regulatory Mechanisms 599
**17.12** Eukaryotic Versus Prokaryotic Gene Regulation 602

**Genetic Linkages** 603

Chapter Summary Questions 604
Solved Problems 605
Exercises and Problems 606

**18** DNA Mutation, Repair, and Transposition 609

**18.1** Mutation 610
**18.2** Types of Mutations and Their Effects 613
**18.3** Mutagenesis: Origin of Mutation 617
**BOX 18.1** Applying Genetic Principles to Problems: *Calculating Mutation Rate and Mutation Frequency* 617
**BOX 18.2** Applying Genetic Principles to Problems: *Applying Mutagenic Mechanisms to Generate Nonsense Mutations* 624
**18.4** DNA Repair 627
**18.5** Transposable Genetic Elements 639
**Genetic Linkages** 650
Chapter Summary Questions 651
Solved Problems 651
Exercises and Problems 652

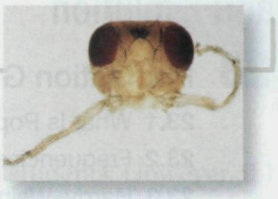
**19** Extranuclear Inheritance 656

**19.1** Physiological Roles of Mitochondria and Chloroplasts 657
**19.2** Origin of Mitochondria and Chloroplasts 660
**19.3** Structure and Organization of the Organellar Genomes 662
**19.4** Mechanisms of Organellar Inheritance 669
**19.5** Inherited Human Mitochondrial Diseases 674
**BOX 19.1** Applying Genetic Principles to Problems: *Inheritance of Mitochondrial-Associated Metabolic Disease in Humans* 676
**Genetic Linkages** 677
Chapter Summary Questions 678
Solved Problems 678
Exercises and Problems 679

**20** Mutational Analysis 682

**20.1** Types of Mutations 683
**BOX 20.1** Applying Genetic Principles to Problems: *Mapping Chromosomal Breakpoints Associated with a Mutant Phenotype* 690
**20.2** Forward Genetics 692
**20.3** Reverse Genetics 701
**20.4** Advanced Genetic Analysis 707
**20.5** Phenocopying 712
**Genetic Linkages** 717
Chapter Summary Questions 718
Solved Problems 719
Exercises and Problems 720

**part five**



**Genetics and Biological Processes**

**21** Developmental Genetics 726

**21.1** Basic Concepts in Animal Development 727
**21.2** Pattern Formation During *Drosophila* Embryonic Development 730
**BOX 21.1** Applying Genetic Principles to Problems: *Identification of Genes Involved in a Signaling Pathway* 736
**21.3** Generation of Cell Identity During Development 740
**21.4** Sex Determination 744
**21.5** *Drosophila* Eye Development 753
**21.6** Programmed Cell Death in Development 757
**Genetic Linkages** 759
Chapter Summary Questions 760
Solved Problems 760
Exercises and Problems 760

**22** Cancer Genetics 763

**22.1** What Is Cancer? 764
**22.2** Carcinogens 764
**22.3** The Cell Cycle 770
**22.4** Apoptosis 774
**22.5** Spontaneous Cancers 776
**BOX 22.1** Applying Genetic Principles to Problems: *Detection of* K-ras *Mutations in Pancreatic Cancer* 778
**22.6** Cancer Predisposition and Familial Cancers 781
**22.7** Tumor Progression 784
**Genetic Linkages** 786
Chapter Summary Questions 786
Solved Problems 787
Exercises and Problems 787

## part six

## Population Genetics and Evolution

**23** Population Genetics 790

**23.1** What Is Population Genetics? 791
**23.2** Frequencies of Genotypes and Alleles 792
**23.3** Hardy–Weinberg Equilibrium 793

**BOX 23.1** Applying Genetic Principles to Problems: *Application of the Hardy–Weinberg Equilibrium to a Human Population* 798

**23.4** Selection: Shifting Allelic Frequencies 799
**23.5** Random Genetic Drift 806
**23.6** Migration and Population Structure 809
**23.7** Nonrandom Mating 811

**Genetic Linkages** 814

Chapter Summary Questions 814
Solved Problems 815
Exercises and Problems 815

**24** Quantitative Genetics 819

**24.1** What Is Quantitative Genetics? 820
**24.2** Polygenic Traits 821
**24.3** Statistical Tools in Quantitative Genetics 824

**BOX 24.1** Applying Genetic Principles to Problems: *Analyzing Covariance and Predicting Values from the Data* 829

**24.4** The Nature of Continuous Variation 830
**24.5** Heritability 832
**24.6** Quantitative Genetics in Ecology 836
**24.7** Quantitative Trait Loci Mapping 839

**Genetic Linkages** 842

Chapter Summary Questions 843
Solved Problems 844
Exercises and Problems 844

**25** Evolutionary Genetics 849

**25.1** Charles Darwin and the Principles of Natural Selection 850
**25.2** What Is Evolutionary Genetics? 851
**25.3** Speciation 852
**25.4** Evolution at the Molecular Level 858
**25.5** Comparison of Genomes and Proteomes 862
**25.6** Applications of Evolutionary Genetics 864

**Genetic Linkages** 867

Chapter Summary Questions 868
Solved Problems 869
Exercises and Problems 869

**Glossary** G-1
**Credits** C-1
**Index** I-1
