<b>Preface</b>	<b>v</b>
<b>1 Environmental history</b>	<b>1</b>
1.1 Why 'Tropical East Asia'?	1
1.2 Ecological vs. historical explanations	2
1.3 Plate tectonics and the origin of Tropical East Asia	2
1.4 Sea-level changes	5
1.5 Changes in climate and vegetation	7
1.6 Extraterrestrial impacts, volcanoes, and other natural catastrophes	9
1.7 The first humans	13
1.8 The arrival of modern humans	14
1.9 The spread of agriculture	17
1.10 Hunting	18
1.11 Burning	19
1.12 Urbanization	20
<b>2 Physical geography</b>	<b>22</b>
2.1 Introduction	22
2.2 Weather and climate	22
2.2.1 Temperatures	24
2.2.2 Slope angle and aspect	24
2.2.3 Rainfall	25
2.2.4 Water from fog	25
2.2.5 Interannual variation in rainfall	26
2.2.6 Snow and ice	28
2.2.7 Wind	28
2.2.8 Lightning	30
2.3 Fires	30
2.4 Soils	31
2.4.1 Soil classifications	31
2.4.2 Landslides and soil erosion	33
2.5 Vegetation	33
2.5.1 Lowland vegetation	34
2.5.2 Montane vegetation	43
2.5.3 Wetlands	45
2.5.4 Urban vegetation	47
2.6 Plant phenology	49
2.6.1 Leaf phenology	49
2.6.2 Reproductive phenology	51

<b>3 Biogeography</b>	<b>57</b>
3.1 Introduction	57
3.2 Differences between the biogeographical regions	58
3.3 The transition between TEA and the Australian Region	60
3.4 The transition to the Palaeartic Region	61
3.5 Biogeographical elements in the biota of TEA	62
3.6 How many species are there in TEA?	63
3.7 Patterns of diversity within TEA	63
3.8 Subdividing TEA	67
3.9 Island biogeography	69
3.9.1 Continental islands on the Sunda Shelf	70
3.9.2 Hainan and Taiwan	70
3.9.3 Ryukyu (Nansei) Islands	71
3.9.4 Ogasawara (Bonin) Islands	71
3.9.5 Palau Islands	72
3.9.6 Krakatau	72
3.9.7 Andaman and Nicobar Islands	72
3.9.8 Islands off the west coast of Sumatra	74
3.9.9 The Philippines	74
3.9.10 Sulawesi	76
3.9.11 Sangihe and Talaud Islands	77
3.9.12 Nusa Tenggara	78
3.9.13 Maluku	79
<b>4 The ecology of plants: from seed to seed</b>	<b>80</b>
4.1 Introduction	80
4.2 Study sites	80
4.3 Trees from seed to seed	81
4.3.1 Pollination	82
4.3.2 Seed dispersal	89
4.3.3 Gene flow by pollen and seeds	97
4.3.4 Seed predation and seed pathogens	97
4.3.5 Germination and seedling establishment	100
4.3.6 The seedling stage	101
4.3.7 Sapling to adult	102
4.3.8 Sprouts and resprouting	104
4.4 Other life forms	105
4.4.1 Lianas	105
4.4.2 Ground herbs	106
4.4.3 Epiphytes	106
4.4.4 Hemi-epiphytes and stranglers	107
4.5 The maintenance of species-diversity in tropical forests	108
4.6 Forest succession	111
4.7 Phylogeny and community assembly	112
<b>5 The ecology of animals: foods and feeding</b>	<b>113</b>
5.1 Introduction	113
5.2 Herbivores	113
5.2.1 Leaf-eaters	113

5.2.2	Shoot-, bark-, and wood-feeders	119
5.2.3	Root-feeders	119
5.2.4	Sap-suckers	119
5.2.5	Ants as 'cryptic herbivores'	120
5.2.6	Gall-formers	121
5.2.7	Flower visitors	121
5.2.8	Frugivores	123
5.2.9	Granivores	126
5.3	Detritivores	127
5.4	Carnivores	128
5.4.1	Invertebrate-feeders	128
5.4.2	Vertebrate-feeders	132
5.5	Parasites and parasitoids	135
5.6	Omnivores	136
5.7	Scavengers	137
5.8	Coprophages	137
<b>6</b>	<b>Energy and nutrients</b>	<b>139</b>
6.1	Introduction	139
6.2	Energy and carbon	139
6.2.1	Primary production	139
6.2.2	Biomass	142
6.2.3	Net ecosystem production and exchange	142
6.3	Other nutrients	143
6.3.1	Nitrogen	144
6.3.2	Phosphorus	145
6.3.3	Essential cations	147
6.3.4	Micronutrients	148
6.3.5	Aluminium, manganese, and hydrogen	148
6.4	Research needs	149
<b>7</b>	<b>Threats to biodiversity</b>	<b>150</b>
7.1	Introduction	150
7.2	Don't trust the numbers!	150
7.3	The ultimate causes	151
7.3.1	The growth of human populations	151
7.3.2	Poverty	152
7.3.3	Corruption	153
7.3.4	Globalization	153
7.4	The major threats to biodiversity	154
7.4.1	Habitat loss	154
7.4.2	Deforestation	154
7.4.3	Fragmentation	156
7.4.4	Mining	158
7.4.5	Urbanization	159
7.4.6	Logging	159
7.4.7	Collecting of non-timber forest products	161
7.4.8	Hunting	161
7.4.9	Fires	164

7.4.10	Invasive species	165
7.4.11	Diseases of wildlife, people, and plants	168
7.4.12	Air pollution and nutrient enrichment	168
7.4.13	Climate change	170
7.5	Predicting extinctions	173
7.6	Satellites and cryptic threats	175
<b>8</b>	<b>Conservation: saving all the pieces</b>	<b>176</b>
8.1	Introduction	176
8.2	Who should pay and how?	176
8.2.1	Who should pay?	176
8.2.2	Payments for environmental services	178
8.2.3	Carbon offsets	179
8.2.4	Biodiversity offsets	180
8.2.5	Tourism	181
8.2.6	Voluntary conservation measures	183
8.2.7	Certification	183
8.2.8	The role of NGOs	186
8.3	What should be protected?	186
8.3.1	Surrogates in conservation planning	186
8.3.2	Setting priorities	188
8.4	Protecting areas	192
8.4.1	Establishing new protected areas	192
8.4.2	Enhancing protection for existing protected areas	193
8.4.3	Community-based conservation	194
8.4.4	Integrated Conservation and Development Projects (ICDP)	194
8.5	Sustainable exploitation	195
8.5.1	Logging and the collection of non-timber forest products	195
8.5.2	Hunting	196
8.5.3	Controlling trade	196
8.6	Managing the matrix	197
8.7	Managing other threats	198
8.7.1	Controlling fires	198
8.7.2	Managing invasive species	198
8.7.3	Mitigating climate change impacts	199
8.7.4	Biofuels	201
8.7.5	Air pollution	201
8.8	<i>Ex-situ</i> conservation	201
8.9	Ecological restoration and reintroduction	203
8.9.1	Restoring forest	203
8.9.2	Reintroducing species	206
8.10	Conservation leakage	208
8.11	Education	208
8.12	Does conservation work?	210
8.13	The way forward for biodiversity conservation in TEA	211
