

Molecular Cloning of Hormone Genes

edited by

Joel F. Habener

Humana Press • Clifton, New Jersey

Contents

Preface	v
List of Contributors	xv
 Chapter 1	
<i>Approaches to Gene Cloning</i>	1
Joel F. Habener	
1. Introduction	1
2. Construction and Analysis of Recombinant DNA	2
3. Techniques of Identification	5
4. Cloning Techniques	7
5. Hybridization Probes	8
References	9
 Chapter 2	
<i>Gene Structure and Regulation</i>	11
Joel F. Habener	
1. Introduction and Background	11
1.1. Discovery of Endocrine and Neurocrine Secretions	11
1.2. Investigations of Early Evolutionary Origins of Peptides as Hormones and Local Regulatory Peptides	12
1.3. Present Information Based on Molecular and Cellular Biology	14
2. The Structure and Organization of Genes	15
3. Precursors of the Peptide Hormones	19
3.1. Precursor Sequences Signal Intracellular Segregation	19
3.2. Many Peptide Hormone Precursors Are Polypeptides That Encode Multiple Peptides	22
3.3. Coding Sequences of Genes Are Interrupted	24
4. The Generation of Biologic Diversity	27
5. Gene Expression	35
5.1. Regulation of Gene Expression	35
5.2. <i>cis</i> and <i>trans</i> Mechanisms of Gene Regulation	37
6. Tissue-Specific Gene Expression	40

7. Coupling of Effector Action to Cellular Response	42
References	47

Chapter 3

<i>Insulin Genes: Molecular Cloning and Analyses</i>	53
---	----

Shu Jin Chan

1. Introduction	53
2. Molecular Cloning Strategies	54
3. Structure and Expression of the Insulin Gene	56
4. Polymorphism in the Human Insulin Genes	60
5. Abnormal Human Insulins	61
References	63

Chapter 4

<i>The Glucagon Genes</i>	69
--	----

Gerhard Heinrich and Joel F. Habener

1. Introduction	69
1.1. Background	69
1.2. Recombinant cDNAs Encoding Preproglucagon	71
2. Cloning and Characterization of Rat Preproglucagon mRNAs and cDNAs	71
2.1. Preproglucagon cDNAs	71
2.2. Hybridization Analysis of Preproglucagon mRNA	73
3. Glucagon Gene Cloning and Structural Analysis	75
3.1. Hybridization Analysis of the Glucagon Chromosomal Gene	75
3.2. Structural Analyses of the Rat Glucagon Gene	77
3.3. Experimental Procedures Used for the Isolation of a Recombinant Bacteriophage Containing the Rat Glucagon Gene	77
3.4. Partial Nucleotide Sequence Analysis of Gene Subclones ..	79
3.5. Promoter and Transcriptional Initiation Sites of the Rat Glucagon Gene	83
4. Implications Derived From the Structure of the Glucagon Gene ..	85
4.1. Evolution of the Glucagon Gene	85
4.2. Tissue-Specific Processing of Preproglucagon	87
References	89

Chapter 5

<i>The Somatostatin Genes</i>	93
--	----

Richard H. Goodman, Marc R. Montminy, Malcolm J. Low, and Joel F. Habener

1. Introduction	93
2. Anglerfish Somatostatins	95
3. Mammalian Somatostatin	101

4. Future Directions	112
References	113

Chapter 6

The Human Growth-Hormone Gene Family 121

**David D. Moore, Richard F Selden, Edouard Prost, Daniel S. Ory,
and Howard M. Goodman**

1. Introduction	121
2. Map of the GH Locus	122
3. Sequences of the GH Family Members	125
References	133

Chapter 7

Glycoprotein Hormone Genes 137

William W. Chin

1. Introduction	137
1.1. General Considerations	137
1.2. Structure of Glycoprotein Hormones	139
1.3. Major Questions	142
2. Molecular Cloning of Genes Encoding the Subunits of Glycoprotein Hormones	143
2.1. Molecular Cloning of α -Subunit cDNAs	143
2.2. Molecular Cloning of the Genes Encoding the α -Subunit of Glycoprotein Hormones	149
2.3. Molecular Cloning of cDNA Encoding the β -Subunit of Human CG	151
2.4. Molecular Cloning of the Genes Encoding the Human CG β -LH β Subunits	153
2.5. Molecular Cloning of cDNA Encoding the Rat LH β - Subunit	156
2.6. Molecular Cloning of the Gene Encoding the Rat LH β - Subunit	158
2.7. Molecular Cloning of cDNA Encoding the TSH β -Subunit ..	159
2.8. Molecular Cloning of the Genes Encoding the TSH β - and FSH β -Subunits	160
2.9. Chromosomal Localization of the Subunit Genes of Glycoprotein Hormones	160
3. Expression of the Subunit Genes	162
4. Summary	165
References	165

Chapter 8

Oxytocin and Vasopressin Genes: Expression and Structure 173

Dietmar Richter

1. Introduction	173
2. Elucidation of the Precursor Structures	174

2.1. Cloning Strategy	174
2.2. Structure-Function Relations	176
3. Maturation of the Precursors	179
4. Vasopressin and Oxytocin Genes	183
4.1. Implications of the Gene Structures	187
4.2. Transcriptional Control	189
5. The Vasopressin Gene in Diabetes Insipidus (Brattleboro) Rats ..	190
5.1. Gene Sequence and the Predicted Vasopressin Precursor ..	191
5.2. Transcription and Translation	192
6. Expression of the Oxytocin Gene in Peripheral Organs	196
7. Polyprotein Structures and Their Implications	197
References	201

Chapter 9

<i>The Proopiomelanocortin Genes</i>	207
---	-----

Michael Uhler and Edward Herbert

1. Introduction	207
2. Cloning of POMC Complementary DNA	209
3. POMC Gene Structure	214
4. Applications of Recombinant-DNA Probes to the Study of POMC Gene Expression	218
5. Summary	223
References	224

Chapter 10

<i>Enkephalin Genes</i>	229
--------------------------------------	-----

Ueli Gubler

1. Introduction	229
1.1. Nature of the Peptides	229
1.2. Physiologic Importance	231
1.3. Rationale for Analyzing the Genes	231
1.4. Screening Approaches	232
2. mRNA Characterization and Gene Structure	236
2.1. Characterization of Proenkephalin and Prodynorphin mRNAs	236
2.2. Molecular Cloning of Bovine and Human Proenkephalin mRNAs	238
2.3. Isolation of the Human Proenkephalin Gene	246
2.4. Isolation and Characterization of the Rat Proenkephalin mRNA and Gene	252
2.5. Isolation of the Toad Proenkephalin Gene	258
2.6. Molecular Cloning of Porcine and Human Prodynorphin mRNAs	260
2.7. Isolation of the Human Prodynorphin Gene	263
2.8. Isolation of the Rat Prodynorphin Gene	268
2.9. Summary of Structural and Evolutionary Considerations ...	269
References	273

6.1. Structure of Mouse Submaxillary Preprorenins—A Model for Renin Processing	327
6.2. Structure of Mouse Kidney Renin Deduced From Genomic Sequence	329
6.3. Structure of Human Kidney Renin Deduced From cDNA Sequence	329
7. Structure of the Renin Gene and Comparison With Other Aspartyl Proteases	332
8. Tissue-Specific Expression of the Renin Gene	336
9. Conclusion	338
References	339

Chapter 14

<i>Nerve Growth Factor: mRNA and Genes That Encode the β-Subunit.</i>	343
---	-----

Gerhard Heinrich

1. Introduction	343
2. Cloning of DNA Complementary to the mRNA That Encodes the β -Subunit of Nerve Growth Factor	345
3. Human β -NGF Gene	353
4. Structure of β -NGF mRNA and Gene	358
5. Structure of the β -NGF Precursor Encoded by β -NGF mRNA and Gene	359
6. Knowledge Gained—and the Future	360
References	361

Chapter 15

<i>Bombesin-Like Peptide Genes</i>	365
---	-----

Eliot R. Spindel

1. Introduction	365
2. Structure of Bombesin-Like Peptides	366
2.1. Amphibian Bombesin-Like Peptides	366
2.2. Mammalian Bombesin-like Peptides	369
2.3. Conclusions	370
3. Distribution and Physiology	371
3.1. Gastrin-Releasing Peptide	371
3.2. Mammalian Ranatensin	373
4. Molecular Biology	374
4.1. Gastrin-Releasing Peptide	374
4.2. Amphibian Bombesin-Like Peptides	381
5. Summary and Perspectives	382
6. Acknowledgments	382
References	382

Chapter 16

<i>Biosynthesis of Peptides in the Skin of <i>Xenopus laevis</i>: cDNAs Encoding Precursors of Caerulein, PGL^a, Xenopsin, and Thyrotropin-Releasing Hormone.</i>	391
--	-----

K. Richter, W. Hoffmann, R. Egger, and G. Kreil

1. Introduction	391
2. Precursor Sequences Deduced From Cloned cDNAs	392
2.1. Precursors of Caerulein	392
2.2. Precursor for PGL ^a , A New Peptide From the Skin of <i>X. laevis</i>	394
2.3. Precursor of Xenopsin	396
2.4. Precursor of Thyrotropin-Releasing Hormone	397
2.5. Comparison of the Precursors for Caerulein, PGL ^a , and Xenopsin	398
3. Conclusions	400
References	401

Chapter 17**cDNA Encoding Precursors of the Bee-Venom Peptides**

Melittin and Secapin	405
R. Vlasak, I. Malec, and G. Kreil	
1. Introduction	405
2. Cloning and Sequence Analysis of Melittin mRNA	406
3. Sequence Analysis of the Cloned mRNA and Preprosecapin	407
References	410

Chapter 18**Yeast α -Factor Genes****Janet Kurjan**

1. Introduction	413
2. Cloning of MF α 1 Using a Genetic Technique	415
3. Structure of MF α 1	417
4. Cloning of MF α 1 and MF α 2 by Hybridization	419
5. Structure of MF α 2 and Comparison of MF α 1 and MF α 2	422
6. Precursor Processing	424
7. Function of MF α 1 vs MF α 2	427
8. Summary	429
References	431

Index	435
--------------------	-----
