1	Introduction: Sraffa's Theory Today		
	1.1	The teacher	1
	1.2	The early critique	2
	1.3	Production of commodities	4
	1.4	Intertemporal equilibrium	6
	1.5	The classical method	7
	1.6	Joint production	9
	1.7	The composition of output	12
	1.8	Distribution	15
	1. <b>9</b>	The 'Prelude' and its implications	17
PA:	RT I	GENERAL PROPERTIES OF SINGLE AND JOIN PRODUCTION SYSTEMS	T
2	Mult	iple Product Techniques with Properties of Single	
	Prod	luct Systems	21
	2.1	Single versus joint production	22
	2.2	Negative labour values, indispensable processes and	
		separately producible commodities	27
	2.3	All-engaging systems and switches of techniques	29
	2.4	General joint production systems	34
	2.5	A remark on technical progress	39
3	Rela	tive Prices as a Function of the Rate of Profit:	
	A N	lathematical Note	46
	3.1	A new mathematical theorem	46
	3.2	Values and prices: the rule and the exception	51
	3.3	Uniqueness of the system yielding a given vector of	
		prices	55
	3.4	Reswitching and the technology set	57
	3.5	Wicksell effects	68
	3.6	The capital-wages ratio	71

4	The Standard Commodity as a Tool of Economic Analysis				
	4.1	Introduction			
	4.2	The standard commodity in economic analysis			
	4.3	The search for an invariable measure of value and			

	Sraffa's development of the standard commodity	79
4.4	A mathematical formulation	87
4.5	A comment on Flaschel	94

76 76 77

4.5 A comment on Flaschel

## PART II THE DOMINANT TECHNIQUE

5	On	Counti	ng Equations	101	
	5.1	Introd	uction	101	
	5.2	5.2 Comparing wage curves and optimal solutions:			
		genera	l case	105	
	5.3	Proper	rties of regular systems	115	
	5.4	Count	ing of equations	127	
	5.5	Examj	ple	132	
6	Von	Neum	ann and Sraffa: Mathematical Equivalence		
	and Conceptual Difference				
	6.1	The framework of comparison		135	
		6.1.1	Prices and technical change in Sraffa		
			systems	135	
		6.1.2	Growth and technical change in Sraffa		
			systems	138	
		6.1.3	The von Neumann approach	139	
		6.1.4	Establishing formal equivalence	140	
		6.1.5	Intersecting and coinciding wage curves	143	
	6.2	Conce	ptual differences	145	
		6.2.1	Equilibrium and processes	145	
		6.2.2	Beyond the golden rule	147	
		6.2.3	Summary	148	
	Арр	endix:	Mathematical Formulation	150	
7	The	Domi	nant Technique in Joint Production Systems	156	
	7.1	Introd	uction	156	
	7.2	The d	ominant technique	163	
	7.3	What	has been achieved?	173	

	Contents				
	Appendix 1: Graphic Illustrations and Examples Appendix 2: The Influence of Changes of the	176			
	Composition of Output on the Dominant Technique				
	Appendix 3: Proofs of the Theorems	191			
8	Joint Production: A Further Assessment	197			
	8.1 Introduction	197			
	8.2 Puzzles and more serious problems	198			
	8.3 Important areas of research	. 200			
	Appendix	205			
PA	RT III FIXED CAPITAL AND TECHNICAL PRO	GRESS			
9	Fixed Capital as a Joint Product	211			
	9.1 Introduction	211			
	9.2 Machines	212			
	9.3 Integrated systems and finished goods	218			
	9.4 Prices and intermediate goods (old machines)	220			
	9.5 Truncation theorems	226			
	Appendix: Proois of the Mathematical Theorems	232			
10	Reduction to Dated Quantities of Labour, Roundal	bout			
	Processes and Switches of Technique in Fixed Capital Systems				
	Systems	240			
	10.1 Reduction	240			
	10.2 Fixed capital and the 'centre'	242			
	10.3 Interpretation of centre coefficients	245			
	10.4 Further applications	248			
	10.5 Roundabout processes	252			
11	Different Forms of Technical Progress	257			
	11.1 Introduction	257			
	11.2 Saving of labour	258			
	11.3 Mechanisation	260			
	11.4 Effects of mechanisation	265			
	11.5 Other forms of technical progress	268			
	11.6 Marx's temporary retreat to Ricardo	270			
	11./ Conclusions	273
