
*MODERN TECHNIQUES
FOR RAPID
MICROBIOLOGICAL ANALYSIS*

Wilfred H. Nelson

Contents

Preface	v
Contributors	xiii

1	IDENTIFICATION OF CHEMICAL MARKERS FOR MICROBIAL DIFFERENTIATION AND DETECTION BY GAS CHROMATOGRAPHY— MASS SPECTROMETRY	1
	<i>Stephen L. Morgan, Alvin Fox, James C. Rogers, and Bruce E. Watt</i>	
I.	Introduction	1
II.	Microbial Chemical Markers	4
	A. Carbohydrate Markers for Bacterial Peptidoglycan and Associated Structure	4
	B. Amino Acid Markers for Peptidoglycan	6
	C. Markers for Streptococcal Polysaccharides	6
	D. Markers for Lipopolysaccharide in Gram-Negative Bacteria	7
	E. Markers for Sporulating Organisms	12
	F. Markers for Poly- β -hydroxybutyrate, an Energy and Carbon Storage Compound	13
III.	Conclusions	14
	References	15

2 RAPID DETECTION AND IDENTIFICATION OF MICROORGANISMS VIA PYROLYTIC ON-LINE DERIVATIZATION—GAS CHROMATOGRAPHY—MASS SPECTROMETRY 19

Jacek P. Dworzanski and Henk L. C. Meuzelaar

- I. Introduction 19
- II. Profiling of Bacterial Fatty Acids: Derivatization of Fatty Acids for GC and MS Analysis 21
- III. On-Line Liberation and/or Pyrolytic Derivatization (Py-OLD-GC—MS) of Fatty Acids from Whole Bacterial Cells 23
 - A. Principle of the Procedure 23
 - B. Methodology 23
- IV. Applications of the Pyrolytic On-Line Derivatization—GC—MS Technique 26
 - A. Mycolic Acids 29
 - B. Fatty Alcohols 33
 - C. Mycocerosic Acids 34
 - D. Data Processing 38
- V. Conclusions 39
- References 40

3 THE CHARACTERIZATION OF MICROORGANISMS BY FOURIER-TRANSFORM INFRARED SPECTROSCOPY (FT-IR) 43

D. Naumann, D. Helm, H. Labischinski, and P. Giesbrecht

- I. Introduction 43
- II. Theory and Instrumentation 46
 - A. IR-Radiation, Molecular Vibration, and Structure 46
 - B. Interferometric and Fourier Techniques 48
 - C. The FT-IR Spectrometer 52
- III. Experimental Techniques 54
 - A. Measuring Techniques 54
 - B. Preparation Techniques and Instrumental Parameters 57
- IV. The Information Content of Bacterial FT-IR Spectra 59
- V. The Differentiation Capacity 65
- VI. The Classification and Identification Problem 69

A.	Identification and Classification of Bacteria via D-value Calculations	69
B.	Classification and Identification Using Multivariate Statistics	73
VII.	Detection, Enumeration, and Differentiation of Bacteria by FT-IR Microscopy	81
VIII.	Testing Antibiotic Susceptibility by FT-IR	87
IX.	Conclusions	90
	References	92

4 UV RESONANCE RAMAN SPECTROSCOPIC DETECTION AND IDENTIFICATION OF BACTERIA AND OTHER MICROORGANISMS 97

Wilfred H. Nelson and Jay F. Sperry

I.	Introduction	97
II.	Raman Spectra	100
A.	The Phenomenon	100
B.	Resonance Raman Spectra	104
III.	Small Molecule Components of Bacterial Macromolecules	106
A.	Proteins	108
B.	Purines, Pyrimidines, and Nucleic Acids	109
IV.	Raman Spectra of Bacteria	111
A.	Chromobacteria	114
B.	UV Excitation	114
C.	The Effect of Cultural Conditions	120
D.	Determination of GC/AT Ratios	127
V.	Organisms Other Than Bacteria	129
A.	Bacterial Spores	129
B.	Cyanobacteria	133
C.	Pollen	134
D.	Viruses	135
VI.	Conclusions	138
	References	138

5 A POLARIZATION-SENSITIVE MULTIPARAMETER LIGHT-SCATTERING CHARACTERIZATION OF BACTERIA 145

Cathy D. Newman, Tammy B. Hebner, and Fritz S. Allen

I.	Introduction	145
A.	Stokes Vectors	147
B.	Scattering Matrix	148
C.	Instrument	151
D.	Mueller Matrix Data	152

II. MLS Applications in Biotechnology	154
III. Applications of MLS to Industrial Microbiology	159
IV. Applications of MLS to Clinical Microbiology	163
V. Prospects for the Future?	167
References	169

6 POLARIZED LIGHT SCATTERING AS A MEANS FOR DETECTING SUBTLE CHANGES IN MICROBIAL POPULATIONS 171

Burt V. Bronk, Willem P. Van De Merwe, and Donald R. Huffman

I. Introduction	171
II. Mathematical Descriptions	173
A. Elements	174
B. The Amplitude Matrix	175
III. Instrumentation	177
IV. Applications	180
V. Discussion	194
References	196

7 MULTIDIMENSIONAL FLUORESCENCE IDENTIFICATION OF PHYTOPLANKTON 199

Philip B. Oldham

I. Introduction	199
A. Microscopic Examination	199
B. Extraction Techniques	200
C. Chromatography	201
D. Ultraviolet-Visible Absorbance	201
E. Fluorescence	201
F. In Vivo Monitoring	201
II. Theory and Instrumentation of Fluorescence Spectroscopy	202
A. Photophysical Processes of Molecular Fluorescence	202
B. Analytical Features	204
C. Conventional Instruments	206
D. Rapid Scanning Instruments	207
E. Pattern Recognition of Total Luminescence Spectra	210
III. Pattern Recognition of Phytoplankton Populations	215
A. Laboratory Cultures	215

B. Natural Populations	223
C. Environmental Effects on Spectral Fingerprints	233
IV. Conclusion	235
References	237

8 INSTRUMENTATION AND TECHNIQUES FOR THE RAPID IDENTIFICATION OF BACTERIA USING FLUORESCENCE LIFETIMES 241

Kenneth Schlager

I. Introduction	241
II. Benefits of Using Time-Resolved Fluorescence	242
III. Instrumentation for Time-Resolved Fluorometry	245
A. Functional Components	245
IV. Fluorochrome-Aided Identification (Secondary Fluorescence)	256
References	257
