

Melanism

Evolution in Action

Michael E.N. Majerus

Department of Genetics, University of Cambridge

OXFORD NEW YORK TOKYO
OXFORD UNIVERSITY PRESS

1998

Contents

Plate section falls between pp. 146 and 147

1 What is melanism?	1
Introduction	1
What is melanism?	3
The moths as material for the study of evolution in action	4
2 The diversity of melanics	11
The melanins	11
The diversity of melanism	14
The causes of melanism	26
Physical properties of being melanic	26
Melanism in defence	31
Sexual selection	35
Melanism as a by-product	36
The complexity of melanism	37
3 The principles of genetics	38
Introduction	38
From generation to generation	38
Mendelian inheritance	42
The breaking of Mendel's laws	56
Continuous variation and polygenic inheritance	63
Behavioural genetics	65
Environmental variation	66
Opportunities and the need for original research	68
4 Evolutionary processes	70
Introduction	70
Two mechanisms of evolution	70
Genetic drift	71
The Hardy–Weinberg law	72
Natural selection	75
Polymorphism	83
The maintenance of genetic polymorphism: the selection-drift controversy	84
How do adaptations arise?	95

5 The peppered moth story	97
Introduction	97
The 'textbook' story of the peppered moth	98
The early history of the black peppered moth and other industrial melanics	99
Kettlewell's experiments on the predation of peppered moths by birds	104
The frequency of <i>f. carbonaria</i> across Britain	111
The selective advantage of <i>f. carbonaria</i> over <i>f. typica</i>	112
The correlation between melanic frequency and pollutants	112
The decline in <i>carbonaria</i> as a consequence of anti-pollution legislation	115
6 The peppered moth story dissected	116
Introductory remarks	116
The components of the traditional peppered moth story examined	117
Other factors pertinent to melanism in the peppered moth	136
Melanism in the peppered moth outside Britain	147
The decline in melanism in the peppered moth	151
Conclusions	155
7 Melanism in the Lepidoptera	157
A classification of melanism in the Lepidoptera	157
Non-industrial melanism	159
Industrial melanism	197
Concluding remarks	205
8 Melanism in conspicuous Lepidoptera	207
Introduction	207
Melanism in Lepidoptera showing warning coloration	207
Melanism in mimetic species	212
9 Melanism in ladybirds	221
Introduction	221
Types of melanic forms in the ladybirds	222
Melanic polymorphism in ladybirds	231
The maintenance of melanic polymorphism in ladybirds	240
Is the 2 spot ladybird a Batesian mimic, a Müllerian mimic, or neither?	241
Evidence for thermal melanism	247
The stability of melanic polymorphism in the 10 spot ladybird	253
Non-random mating in ladybirds	255
Why do rarer melanic forms recur?	257

Melanic polymorphism in ladybirds: we do not have the answers yet?	258
Melanic polymorphism in ladybirds: a thesis	259
10 The future of research into melanism	262
The contribution of the study of melanism to biological understanding	262
The future of research into melanism	264
To it: 'the loving care of its numerous admirers'	268
Appendix	270
Glossary	282
References	299
Index	323
