

# Biocatalysis and Biodegradation

MICROBIAL TRANSFORMATION  
OF ORGANIC COMPOUNDS

BY

Lawrence P. Wackett

*Foreword* • David Gibson    *xi*

*Preface*    *xxi*

## CHAPTER 1

### **General Concepts in Biodegradation and Biocatalysis    1**

**Definition of Terms    2**

**Further Resources in Biocatalysis and Biodegradation    5**

## CHAPTER 2

### **A History of Concepts in Biodegradation and Microbial Catalysis    7**

**The Beginnings of Biodegradation on Earth    7**

**Early Human Observations of Biodegradation and Biocatalysis    9**

**Early Scientific Studies on Biodegradation and the Spontaneous-  
Generation Debate    9**

**Microbial Pure Cultures from Nature    12**

**Early History of the Study of Diverse Metabolic Activities  
of Microbes    13**

**Unity of Metabolism in Living Things    14**

**Oxygen and Oxygenases    15**

**History of Anaerobic Biocatalysis    18**

**Molecular Genetics and Regulation    19**

**Microbes in Organic Synthesis 22**

**Summary 23**

**CHAPTER 3**

**Identifying Novel Microbial Catalysis by  
Enrichment Culture and Screening 27**

**Why Use Enrichment Culture? 28**

**The General Method 30**

**Selection of Conditions and Medium 33**

**Screening for Specific Biocatalytic Reactions 34**

**Summary 35**

**CHAPTER 4**

**Microbial Diversity: Catabolism of Organic  
Compounds Is Broadly Distributed 39**

**The Importance of Microbial (Bio)diversity 39**

**Fungi in Biocatalysis and Biodegradation 41**

**Distribution in the Prokaryotic World of Biodegradative and Novel  
Biocatalytic Capabilities 43**

**Specialized Biodegradation by Microorganisms with Specialized  
Metabolisms 52**

**Aerobic versus Anaerobic Microorganisms in Biodegradation 52**

**Representative Microorganisms with Broad Catabolic Abilities 54**

**Microbial Consortia in Biodegradation 61**

**Global Biodegradation and the Supraorganism Concept 62**

**Summary 65**

**CHAPTER 5**

**Organic Functional Group Diversity: the Unity of  
Biochemistry Is Dwarfed by Its Diversity 71**

**Microbial Global Cycling of the Elements 72**

**Facts and Fallacies: Natural Products versus Synthetic Chemicals  
and Their Biodegradation 74**

**An Organic Functional Group Classification 76**

**Organic Functional Groups Found in Nature 78**

**Ring Compounds Found in Nature 79**

**Organic Functional Groups: What Is Known with Respect to  
Biodegradation and Microbial Biocatalysis? 88**

**Summary 91**

## CHAPTER 6

**Physiological Processes: Enzymes, Emulsification,  
Uptake, and Chemotaxis 95****General Physiological Responses to Environmental Chemicals 96****Enzymes 97****Enzyme Substrate Specificity 99****Uptake: Getting Substrates to the Enzymes 100****Emulsification: Overcoming Poor Availability of Substrate 104****Organic-Solvent Resistance 105****Chemotaxis: Getting to the Substrates 107****Summary 109**

## CHAPTER 7

**Evolution of Catabolic Enzymes  
and Pathways 115****History 116****Major Protein Families in Microbial Biocatalysis 118****Principles of Evolution Applied to Microbial Catabolism 121****Gene Transfer in the Evolution of Catabolic Pathways 125****Case Study: Enzyme Evolution in the Aminohydrolase  
Protein Superfamily 127****Summary 131**

## CHAPTER 8

**Metabolic Logic and Pathway Maps 135****Overview 135****C<sub>1</sub> Metamap 138****C<sub>2</sub> Metamap 140****Cycloalkane Metamap 141****BTEX Metamap: Aerobic Metabolism 143****BTEX Metamap: Anaerobic Metabolism 145****PAH Metamap 145****Heterocyclic-Ring Metamap 147****Triazine-Ring Metamap 148****Organohalogen Metamap 150****Organometallic Metamap 152****Summary 153**

CHAPTER 9

**Predicting Microbial Biocatalysis  
and Biodegradation 157**

**Why Is It Necessary To Predict Biodegradation Pathways? 158**

**Biodegradation Prediction Systems 159**

**Defining the Trunk Pathways 161**

**Defining the Organic Functional Groups Relevant to  
Microbial Catabolism 163**

**The Basis for Predicting Microbial Biocatalysis  
and Biodegradation 164**

**Beyond Two Functional Groups: the Need for Heuristics 166**

**Summary 168**

CHAPTER 10

**Microbial Biotechnology: Chemical Production  
and Bioremediation 171**

**Historical and Conceptual Progress 171**

**Recent Trends 173**

**End Products of Fermentation: Pharmaceuticals 174**

**Microbial Catalysis To Produce Chiral Products 175**

**Chiral Synthesis of Dichloroprop 178**

**Biocatalysis for Non-Medicinal, Non-Chiral  
Specialty Chemicals 180**

**Biotechnological Waste Recycling 183**

**Case Study of Bioremediation: Atrazine in Soil 184**

**Summary 189**

CHAPTER 11

**The Impact of Genomics  
on Microbial Catalysis 191**

**Genome Sizes and Organization 191**

**The Present Impact of Genomics 197**

**Functional Genomics in the Context of Microbial Biocatalysis 197**

**Inadvertent Deception in Modern Biochemistry Textbooks 202**

**The Case for Reverse Functional Genomics and New Discovery  
in Biocatalysis 202**

**Summary 203**

## CHAPTER 12

**The Extent of Microbial Catalysis and  
Biodegradation: Are Microbes Infallible? 205****Microbial Enzyme Diversity 206****Experiments Suggest that Novel Biocatalytic Reactions  
Are Ubiquitous 209****Enzyme Plasticity and New Biocatalysts 210****Summary 211**

## CHAPTER 13

**Big Questions and Future Prospects 213****The Questions and Some Thoughts on Their Ultimate Answers 213****Summary 216**

## APPENDICES

**A. Books and Journals Relevant to Biodegradation  
and Biocatalysis 217****B. Useful Internet Resources in Biodegradation  
and Biocatalysis 219***Index 223*
