Contents

PREFACE	XV
1. GAS CHROMATOGRAPHY, SUBSTRATE UTILIZATION, AND SYSTEMS FOR MICROBIAL IDENTIFICATION	1
<i>Wayne P. Olson</i>	
Two Very Different Systems	1
Limitations to the Vitek and MIS Systems	3
Other Machines	4
Systems That Are Unlikely to Be Available	4
Methods with Great Promise	7
Acknowledgments	8
References	8

2. THE BIOLOG MICROSTATION SYSTEM AND GENERAL PROCEDURES FOR IDENTIFYING ENVIRONMENTAL BACTERIA AND YEAST 13

Barry R. Bochner

Identification of Microorganisms by Substrate Utilization Testing in 96-Well Microplates 13

Microbial Identification and Characterization: The Needs of the Pharmaceutical Industry 14

Microbial Identification: The Magnitude of the Problem 14

The Biolog System 15

A Major Simplification of Technology 15

Identification of an Unknown Bacterium with the Biolog System 16

The Importance of Culture Media 19

Problems Most Frequently Encountered 22

What If the Strain Cannot Be Identified? 24

Mathematical Analysis and Clustering 25

Advanced Applications of Strain Characterization 27

Validating the Performance of the Biolog System 28

How Accurate Is the Biolog System? 29

Keeping Up with Changes in Taxonomy and Nomenclature 30

Conclusion 31

References 50

3. SUBSTRATE UTILIZATION AND THE AUTOMATED IDENTIFICATION OF MICROBES 53

Lucia Clontz

History of Vitek® 53

System Components 54

Preparations for Identification 55

Inoculation of Test Kits and Interpretation of Results 56

Special Messages 58

Types of Systems Available	59
Gram Negative Identification	59
Gram-Positive Identification	60
Yeast Identification	61
<i>Bacillus</i> Identification	62
Anaerobe Identification	63
Bioburden Determination	64
Assay Card	66
<i>Neisseria/Haemophilus</i> Identification	66
Nonfermenter Identification	67
Data Management and Interface Options	68
Data Management System Options	68
Supplemental React File	68
Computer Interface Options	68
Applications	69
Pharmaceutical Industry	69
Food and Other Related Industries	70
Other Applications	71
System Evaluation—A User's Perspective	71
Gram-Negative Identification	71
Environmental Isolates	72
<i>Listeria</i> Identification	72
Gram-Positive Identification	72
Yeast Identification	73
Bioassay Card	73
Comparison to Other Automated Systems	73
Quality Control	74
System Validation	76
Why Validate? ("If it is not in writing, it is a rumor.")	76
Validation—Step by Step	77
Change Control	79
References	79

4. ANAEROBES 81

*Roger W. Kelly
Tracey C. Schipp*

Principles of System Performance 81

Variables Affecting System Performance 84

Comparison of Journal Articles 85

Anaerobe Identification Systems 87

API 20A 88

Minitek Anaerobe II 89

Rapid ID 32A 89

AN-Ident 90

RapID ANA II 91

VITEK ANI Card 91

MicroScan Rapid Anaerobe Panel 92

Summary and Recommendations 92

References 96

5. GRAM-POSITIVE ORGANISMS 99

Loralyn Harris

AutoMicrobic System 99

Gram-Positive Cocci 102

Gram-Positive Nonspore-Forming Rods 104

Gram-Positive Spore-Forming Rods 105

Automated Tests for Bacteriology System 107

References 110

6. YEASTS 113

*Gerard J. Osterhout
William G. Merz*

Chemotaxonomy 113

Cellular Fatty Acids of Yeast 114

Automated CFA Analysis 116

Applications	121
References	123
7. PROBE TECHNOLOGY AND AUTOMATION	127
<i>Joseph O. Falkinham, III</i>	
Advantages and Disadvantages of Probe Technology	129
Probe Technology Basics	130
Nucleic Acid Probes	130
Antibody Probes	131
Criteria for Probe Selection	131
Isolation of Probes	132
Isolation of Nucleic Acid Probes (DNA or RNA)	132
Isolation of Antibody Probes	132
Isolation of Probe Target	133
Target Nucleic Acid (DNA or RNA) Isolation	133
Target Protein, Polysaccharide, Carbohydrate, and Lipid Isolation	133
Probe-Target Reaction	134
Nucleic Acid Hybridization	134
Antibody-Antigen Reactions	136
Detection of Probe-Target Complex Formation	136
Problem of the Unreacted Probe	137
Detection of Nucleic Acid Hybridization	137
Detection of Antibody-Antigen Formation	138
Sensitivity and Specificity of Probe Technology	138
Quantitation of Probe Data	139
Quality Assurance Considerations	139
Amplification Technologies	139
Amplification Methods	140
Applications of Probe Technology	141
Automation of Probe Technology	143

Criteria for Automation of Probe Technology	143
Steps of Automation	144
Acknowledgments	145
References	145
8. METHODOLOGY FOR DETECTION OF MYCOPLASMAS IN CELL CULTURES USED TO PRODUCE HUMAN PHARMACEUTICALS	149
<i>Gerald K. Masover</i> <i>Frances A. Becker</i>	
Basic Biology of Mycoplasmas	150
Cultural Method	153
Basis for the Method	153
Preparation of Media	153
Preparation and Maintenance of Mycoplasma Stocks for Positive Controls	159
Sampling and Sample Storage	163
Inoculation and Incubation	163
Observation and Identification of Mycoplasmas	165
Interpretation of Results	167
DNAF Method	168
Basis for the Method	168
Reagents	169
Preparation of Indicator Cells	170
Inoculation of Indicator Cells	170
DNAF Staining	170
Interpretation of Results	171
Identification of Mycoplasmas	172
Discussion	173
References	174

9. CELLULAR FATTY ACID ANALYSIS FOR THE CLASSIFICATION AND IDENTIFICATION OF BACTERIA	179
<i>A. Ray Smith</i> <i>Joel P. Siegel</i>	
Nomenclature Used	180
MIDI System	180
Library Generation	182
"Tracking" of Strains	183
Reproducibility	185
Evolution of Fatty Acid Data Interpretation	187
Philosophical Considerations	187
Literature Review	188
Fatty Acid Profiles of Gram-Positive Bacteria	188
The Genus <i>Bacillus</i>	189
Asporogenous, Gram-Positive Rods	198
Gram-Positive Cocci, the Staphylococci	198
Fatty Acid Profiles of Gram-Negative Bacteria	199
Gram-Negative Anaerobic Bacilli	203
The Spirochetes	206
Discussion	208
Discussion Relevant to Publications Cited	208
Present Assessment	217
References	218
10. ENUMERATION AND CHARACTERIZATION OF MICROBIAL POPULATIONS USING OPTICAL AND ELECTRICAL ZONE-SENSING PARTICLE COUNTERS	223
<i>Thomas A. Barber</i>	
Instrumentation and Methods	224
The Coulter® Principle	226
Light Extinction Counting	228
Light-Scattering Counters	231

Flow Cytometry	234
Laser Diffraction	237
Photon Correlation Spectroscopy	238
Choice of Instrumental Methods	239
Microbial Sizing and Counting Applications	241
Counting of Organisms	241
Immunologic and Phagocytic Processes	246
Microbial Size Distribution Studies	248
Size Changes and Growth Phenomena	251
Summary	251
References	253
11. QUANTITATIVE ATP ANALYSIS	259
<i>Melvin E. Klegerman</i>	
Microbial Quantitation	259
Colony-Forming Units	259
Turbidity	260
Quantitation of Metabolites and Microbial Components	260
Measurement of Adenosine Triphosphate	261
Spectrophotometry	261
Coupling to Other Reactions	261
Bioluminescent Measurement of ATP	261
Applications	262
Other Applications of Luminescence Reactions	263
Methods of Bioluminescent ATP Measurement	266
Extraction	266
Measurement	267
Standardization and Quality Control	272
Conclusions	273
References	273

12. LIMULUS AMEBOCYTE LYSATE (LAL) ASSAYS	277
<i>Thomas J. Novitsky</i>	
Nature of Endotoxins/Pyrogens	278
Nature of the LAL Test	278
Biochemistry	278
Specificity	278
Sensitivity	280
Configuration of the Assay	281
Gel-Clot Method	281
Turbidimetric Method	281
Chromogenic Method	282
Other Methods	282
Reagents/Availability	283
Commercial Supply	283
Type of Kits Available	283
Supplies Needed to Perform the Assay Not Supplied with Kits	283
21 CFR	284
Reference Standard and Control Standard Endotoxins	285
Preparatory Testing	285
Test for Confirmation of Labeled LAL Reagent Sensitivity	285
Inhibition or Enhancement Test	285
Maximum Valid Dilution	286
Test Procedure	286
Calculation and Interpretation	287
FDA Guidelines/Guidance	288
Technician/Laboratory Validation	288
Products Applicable to LAL Testing	288
Foreign Regulations	289
European Pharmacopoeia	289
Japanese Pharmacopoeia	289
Health Protection Branch—Canada	289
Domestic and International Standards	290

United States 290
World Health Organization/National Institute of Biological
Standards and Control 290
European Pharmacopoeia 291
Japanese Pharmacopoeia 291
General Notes on Standards 291

Applications 292
Endproduct Testing 292
In-Process Control 292
Clinical/Diagnostic 293
Food 294
Semiconductor Process Water 294
Environmental 294

Validation of Depyrogenation 295

Potential New Applications of Technology 295
