## **CAPITAL THEORY**

## **EQUILIBRIUM ANALYSIS AND**

## **RECURSIVE UTILITY**

ROBERT A. BECKER

Lis	List of Examples		xi	
Preface				
1 The Recursive Utility Approach				
1.1	Intro	duction	1	
1.2	Wha	t Is a Recursive Utility Function?	2	
		Study Recursive Utility?		
		The Long-Run Incidence of Capital Taxation	9 9	
		The Tax Model	9	
		Tax Incidence with TAS Utility	12	
		Tax Incidence with Epstein-Hynes Utility	13	
	1.3.2	The Impatience Problem	16	
		The Impatience Problem with Epstein-Hynes Utility	18	
1.4	Recu	rsive Utility and Commodity Spaces	18	
	1.4.1	Diminishing Returns and Bounded Growth	19	
	1.4.2	Non-Decreasing Returns and Sustained Growth	21	
		Growth and Exogenous Technical Progress	21	
		Endogenous Growth Models	22	
	1.4.3	Order Structures	25	
		Weak Separability of the Future from the Present	25	
	_	Partial Orders on the Commodity Space	26	
1.5	Conc	lusion	27	
		nodity and Price Spaces	29	
2.1	Intro	duction	· 29	
2.2		modity Spaces	29	
	2.2.1	Order Properties	31	
		Free Disposal	32	
	2.2.2	Topological Properties	33	
		Metric Spaces	35	
		Continuity	38	
		Compactness and Product Spaces	39	
		Connectedness	41	
	2.2.3	Linear Topologies	42	
		Order Convergence	44	
		Semicontinuity	46	
		Contraction Mapping Theorems	47	

. .

.

2.3 Commodity Price Dualities	49
2.3.1 Duals and Hyperplanes	52
2.3.2 Hahn-Banach Theorems	53
2.3.3 Dual Pairs and Weak Topologies	55
2.3.4 Order Duals	58
2.3.5 The Dual of $\ell^{\infty}$	60
2.4 Conclusion	62
3 Representation of Recursive Preferences	63
3.1 Introduction	63
3.2 Preference Orders and Utility Theory	64
3.3 Recursive Utility: the Koopmans Axioms	71
3.3.1 The Axioms	72
3.3.2 Biconvergence	75
3.3.3 Recursive Preferences and Additivity	78
3.4 Impatience, Discounting, and Myopia	84
3.4.1 Impatience and Time Perspective	85
3.4.2 Myopia and the Continuity Axiom	86
3.4.3 The Norm of Marginal Impatience Conditions	92
3.5 Recursive Utility: the Aggregator	.96
3.5.1 Basic Properties of the Aggregator	97
3.5.2 The Existence of Recursive Utility	100
3.5.3 Aggregators Bounded from Below	101
2.5.4 Unhounded Aggregater	103
3.5.4 Unbounded Aggregators	
3.6 Conclusion	105
•	
3.6 Conclusion	108

	<u>CONTENTS</u>	ix
4.7	Conclusion	_ 154
5 5	155	
	Introduction	155
5.2	One-Sector Models	157
	5.2.1 The Inada Conditions	157
	5.2.2 Stationary States in One-Sector Models	159
	5.2.3 Monotonicity and Turnpikes in TAS Models	162
	Differential Approach	163
	Nonclassical Models	164
	5.2.4 Monotonicity and Turnpikes in Recursive Models	167 170
5 2	5.2.5 Growing Economies	170
5.5	Steady States in Multisectoral Models 5.3.1 Stationary Optimal Programs for Additive Utility	173
	5.3.2 Stationary Optimal Programs for Recursive Utility	175
54	Stability of Multisectoral Models	186
J.4	5.4.1 The Undiscounted Model	186
	5.4.2 The Visit Lemma	190
	5.4.3 Uniqueness of Steady States	191
	5.4.4 Local Analysis of Steady States	194
	5.4.5 Local and Global Stability	198
5.5	Cycles and Chaos in Optimal Growth	202
	5.5.1 The Existence of Cycles	203
	5.5.2 Chaotic Dynamics	208
5.6	Conclusion	211
6 E	quivalence Principles and Dynamic Equilibria	213
6.1	Introduction	213
6.2	Equivalence Principles for One-Sector Models	216
	6.2.1 The Perfect Foresight Equivalence Theorem	217
	Perfect Foresight Competitive Equilibrium	217
	The PFCE Equivalence Principle	219
	6.2.2 The Fisher Equivalence Theorem	220
	6.2.3 The Equivalence Theorem and Transversality	222
<i>~</i> ~	6.2.4 Recursive Competitive Equilibrium and Equivalence	225
0.3	Multisector Equivalence Principles	228
	6.3.1 The Portfolio Equilibrium Condition 6.3.2 The Two-Sector Equivalence Theorem	228 229
	The Household Sector	229
	The Production Sector	230
	The Transformation Function	232
	Perfect Foresight Equilibrium	233
	The Optimal Growth Problem	234
	The Equivalence Theorem	235
	6.3.3 Dynamics and the Two-Sector Equivalence Theorem	236
6.4	Transversality and the Hahn problem	237

	CONTE	INTS

6.5 Transversality and Decentralization	241	
7 Comparative Dynamics		
7.1 Introduction	242	
7.2 The Reduced-Form TAS Model	246	
7.2.1 Comparative Dynamics for Monotonic Programs	247	
7.2.2 Comparative Dynamics for Oscillating Programs	254	
7.2.3 Comparative Dynamics and Capital Income Tax Reform	257	
7.3 A Primer of Lattice Programming	260	
7.3.1 More about Lattices	261	
7.3.2 An Introduction to Monotone Comparative Statics	264	
7.3.3 Topkis's Theorems	266	
7.4 Lattice Programming and the TAS Model	271	
7.4.1 Monotonicity of Optimal Capital Policy Functions	272	
7.4.2 The Capital Deepening Theorem	274	
7.5 Recursive Utility Models	277	
7.5.1 Recursive Utility, Monotonicity, and Lattice Programming	277	
7.5.2 Increasing Impatience and Recursive Utility	277	
7.5.3 Capital Deepening and Recursive Utility	279	
7.6 Conclusion	284	
8 Dynamic Competitive Equilibrium	285	
8.1 Introduction	285	
8.2 Dynamic Economies	286	
8.2.1 Infinite Horizon Economies	288	
8.2.2 Existence of Pareto Optima	297	
8.3 The Core and Edgeworth Equilibria	298	
8.3.1 Existence of Core Allocations	298	
8.3.2 Replicas and Edgeworth Equilibria	299	
8.4 The Core and Competitive Equilibrium	301	
8.4.1 Core Equivalence	301	
8.4.2 The Welfare Theorems	308	
8.4.3 Representation of Equilibrium as Welfare Maximum	309	
8.5 Models with Very Heterogeneous Discounting	311	
8.6 Conclusion	315
