Introduction 1
*Mark S. Frankel and Jane Cave*

Part I. Evaluating Science and Scientists: The Political and Economic Context

1. The Political Context of Science Priority-Setting in the United States 9
   *Albert H. Teich*

2. The Political and Economic Context of Research Evaluation in Eastern Europe 18
   *György Darvas*

3. Factors Affecting the Acceptance of Evaluation Results 28
   *Ben R. Martin*

Part II. Peer Review: Self-Regulation and Accountability in Science

4. Peer Review in Science and Science Policy 51
   *Edward J. Hackett*

5. A Polish Perspective on Peer Review 61
   *Adam Łomnicki*
6. The Limits of Peer Review: The Case of Hungary  
   Katalin Hangos  

7. The Evaluation of Research Institutes in Hungary  
   Péter Zilahy and István Láng  

8. Peer Review in the Czech Republic  
   Miroslava Vrbova  

9. Peer Review in Poland: Practical Solutions and Possible Improvements  
   Julita Jablecka  

Part III. Quantitative Techniques for Evaluating Performance  

10. Quantitative Techniques in Evaluation in Western Europe  
    Terttu Luukkonen  

11. The Evaluation of Scientists and Their Work  
    Andrzej Ziabicki  

    in Hungary  
    Peter Vinkler  

13. Measuring and Evaluating Scientific Performance in the Czech Republic  
    Jaroslav Koutecky  

14. Institutionalizing Evaluation of Research and Education in the Slovak Republic  
    Jozef Tino  

15. Formal Evaluation Methods: Their Utility and Limitations  
    C. le Pair  

16. Evaluation of Research and Development Programs by Technology Indicators  
    Hariolf Grupp  

17. Quantitative Citation Data as Indicators in Science Evaluations: A Primer on Their Appropriate Use  
    Alfred Welljams-Dorof  

18. Ethical and Political Aspects of Using and Interpreting Quantitative Indicators  
    Gunnar Sivertsen
