CONTENTS

1. Introduction	1
The Replicon Model	2
The Cell Cycle	5
2. The Membrane and the Bacterial Nucleoid	13
Bacterial Cell Envelopes	13
Growth of the Cell Envelope	19
The Bacterial Nucleoid	23
Interactions Between the Nucleoid and the Membrane	26
3. The Initiators of DNA Synthesis	35
The Replicators: Origins of Replication	36
Initiation at <i>E. coli oriC</i>	39
Action of DnaA Protein at Initiation	41
The Role of the Membrane in Initiator Function	44
DnaA Protein Sequence and Structure Conservation	50
Phospholipids, Initiation and the Cell Cycle	52
4. Sequestration of Replication Origins	59
Detection of Membrane-Origin Complexes in <i>E. coli</i>	59
Membrane Sequestration of <i>oriC</i>	61
Other Membrane-Origin Complexes from <i>E. coli</i>	70
Elongation at the Membrane	73
The Geographic Paradox	74
5. Membrane Interactions During Initiation at Other Replicons	79
<i>Bacillus subtilis</i> and Plasmid pUB110	80
<i>Caulobacter crescentus</i>	87
Plasmid Replication and the Membrane	91
Final Remarks	94
6. Events at Termination of the Replication Cycle	101
The Terminus at the Membrane	102
The Terminators of Replication: Replication Arrest	104
Recombination at Termination	108
Decatenation of Daughter Chromosomes	112
Termination Complexes at the Membrane	116

7. Partition of Chromosomes into Daughter Cells	123
Nucleoid Movement and Membrane Growth	124
Role(s) of the Origin and Terminus in Partition	127
Partition or Partition-Like Proteins	
That Associate with the Membrane	128
Partition at Sporulation:	
DNA Transfer Through a Membrane	142
Conclusions	142
8. Perspectives	149
Index	153
