Preface	xiii
Chapter 1 Introduction	1
1.1 Tomorrow is too Late!	2
1.2 Environmental Statistics	2
1.3 Some Examples	5
1.3.1 'Getting it all together'	5
1.3.2 'In time and space'	8
1.3.3 'Keep it simple'	10
1.3.4 'How much can we take?'	12
1.3.5 'Over the top'	14
1.4 Fundamentals	16
1.5 Bibliography	18
PART I EXTREMAL STRESSES: EXTREMES, OUTLIERS, ROBUSTNESS	21
Chapter 2 Ordering and Extremes: Applications, models, inference	23
2.1 Ordering the Sample	24
2.1.1 Order statistics	25
2.2 Order-based Inference	26
2.3 Extremes and Extremal Processes	32
2.3.1 Practical study and empirical models; generalized extreme-value distributions	37
2.4 Peaks over Thresholds and the Generalized Pareto Distribution	40
Chapter 3 Outliers and Robustness	45
3.1 What is an Outlier?	45
3.2 Outlier Aims and Objectives	46
3.3 Outlier-Generating Models	49
3.3.1 Discordancy and models for outlier generation	49
3.3.2 Tests of discordancy for specific distributions	51
3.4 Multiple Outliers: Masking and Swamping	53

3.5	Accommodation: Outlier-Robust Methods	54
3.6	A Possible New Approach to Outliers	55
3.7	Multivariate Outliers	56
3.8	Detecting Multivariate Outliers	58
3.8.1	Principles	59
3.8.2	Informal methods	60
3.9	Tests of Discordancy	66
3.10	Accommodation	68
3.11	Outliers in linear models	70
3.12	Robustness in General	72
PART II COLLECTING ENVIRONMENTAL DATA: SAMPLING AND MONITORING		75
Chapter 4	Finite-Population Sampling	77
4.1	A Probabilistic Sampling Scheme	78
4.2	Simple Random Sampling	79
4.2.1	Estimating the mean, \bar{X}	81
4.2.2	Estimating the variance, S^2	82
4.2.3	Choice of sample size, n	84
4.2.4	Estimating the population total, X_T	85
4.2.5	Estimating a proportion, P	86
4.3	Ratios and Ratio Estimators	89
4.3.1	The estimation of a ratio	90
4.3.2	Ratio estimator of a population total or mean	92
4.4	Stratified (simple) Random Sampling	96
4.4.1	Comparing the simple random sample mean and the stratified sample mean	99
4.4.2	Choice of sample sizes	100
4.4.3	Comparison of proportional allocation and optimum allocation	102
4.4.4	Optimum allocation for estimating proportions	103
4.5	Developments of Survey Sampling	103
Chapter 5	Inaccessible and Sensitive Data	105
5.1	Encountered Data	106
5.2	Length-Biased or Size-Biased Sampling and Weighted Distributions	107
5.2.1	Weighted distribution methods	108
5.3	Composite Sampling	112
5.3.1	Attribute Sampling	112
5.3.2	Continuous variables	115
5.3.3	Estimating mean and variance	115

5.4	Ranked-Set Sampling	117
5.4.1	The ranked-set sample mean	119
5.4.2	Optimal estimation	122
5.4.3	Ranked-set sampling for normal and exponential distributions	124
5.4.4	Imperfect ordering	126
Chapter 6	Sampling in the Wild	131
6.1	Quadrat Sampling	131
6.2	Recapture Sampling	132
6.2.1	The Petersen and Chapman estimators	133
6.2.2	Capture-recapture methods in open populations	136
6.3	Transect Sampling	138
6.3.1	The simplest case: strip transects	139
6.3.2	Using a detectability function	142
6.3.3	Estimating $f(y)$	144
6.3.4	Modifications of approach	146
6.3.5	Point transects or variable circular plots	147
6.4	Adaptive Sampling	148
6.4.1	Simple models for adaptive sampling	149
PART III	EXAMINING ENVIRONMENTAL EFFECTS: STIMULUS-RESPONSE RELATIONSHIPS	151
Chapter 7	Relationship: regression-type models and methods	153
7.1	Linear Models	154
7.1.1	The linear model	156
7.1.2	The extended linear model	158
7.1.3	The normal linear model	160
7.2	Transformations	161
7.2.1	Looking at the data	162
7.2.2	Simple transformations	166
7.2.3	General transformations	168
7.3	The Generalized Linear Model	171
Chapter 8	Special Relationship Models, Including Quantal Response and Repeated Measures	175
8.1	Toxicology Concerns	176
8.2	Quantal Response	178
8.3	Bioassay	180
8.4	Repeated Measures	182

PART IV	STANDARDS AND REGULATIONS	189
Chapter 9	Environmental Standards	191
9.1	Introduction	191
9.2	The Statistically Verifiable Ideal Standard	193
9.2.1	Other sampling methods	195
9.3	Guard Point Standards	199
9.4	Standards Along the Cause-Effect Chain	200
PART V	A MANY-DIMENSIONAL ENVIRONMENT: SPATIAL AND TEMPORAL PROCESSES	203
Chapter 10	Time-Series Methods	205
10.1	Space and Time Effects	205
10.2	Time Series	208
10.3	Basic Issues	211
10.4	Descriptive Methods	213
10.4.1	Estimating or eliminating trend	214
10.4.2	Periodicities	217
10.4.3	Stationary time series	218
10.5	Time-Domain Models and Methods	219
10.6	Frequency-Domain Models and Methods	225
10.6.1	Properties of the spectral representation	225
10.6.2	Outliers in time series	227
10.7	Point Processes	230
10.7.1	The Poisson process	230
10.7.2	Other point processes	232
Chapter 11	Spatial Methods for Environmental Processes	235
11.1	Spatial Point Process Models and Methods	236
11.2	The General Spatial Process	240
11.2.1	Predication, interpolation and kriging	241
11.2.2	Estimation of the variogram	245
11.2.3	Other forms of kriging	248
11.3	More about Standards Over Space and Time	252
11.4	Relationship	253
11.5	More about Spatial Models	255
11.5.1	Types of spatial model	256
11.5.2	Harmonic analysis of spatial processes	257
