

Principles of construction

ROGER GREENO

LONGMAN
LONDON AND NEW YORK

CONTENTS

<i>Preface</i>	vii
<i>Acknowledgements</i>	viii
1 The building cycle	1
Duties and relationship between the various parties to a building contract	1
Site personnel organisation	8
2 Site preparation	15
Site investigation	15
Site organisation	19
Site welfare facilities	20
Storage and protection of materials	21
Trial boreholes	25
Site fencing and hoardings	26
Excavation and site clearance	29
Levelling	36
Setting out	37
Safety in excavations	40
Ground-water control	44
3 Substructure	50
Factors affecting foundation design	50
Foundation types	55
Basement construction	65
Concrete cover to reinforcement	69
4 Walls	70
Strength and stability	71
Pointing and jointing	71
Units of construction	71
External walls	78

iv *Principles of construction*

Internal walls	84
Openings in walls	91
Arches	92
Openings in cavity walls	93
Scaffolding	97
5 Floor construction	103
Timber	103
Concrete	112
6 Roof construction and covering	120
Roof classification	120
Tiles and asbestos slate roof covering	130
Insulation and condensation	135
Wind effect on roof stability	137
7 Framed buildings	139
Reinforced concrete cast <i>in situ</i>	139
Precast concrete	145
Structural steelwork	148
8 Fireplaces and flues	166
Fire recess	166
Hearth	166
Construction in the fire recess	167
Flue and lining	170
Outlets for flues	172
9 Doors and windows	180
Doors	180
Windows	189
Glass and glazing	199
Ironmongery	203
10 Stairs	204
Domestic timber stairs	204
Reinforced concrete stairs	211
11 Internal and external finishings	218
Internal finishes	218
External finishes	236

12	Service installation	244
	Water supply	244
	Drainage	254
	Sanitation	268
13	External works	275
	Fencing	275
	Footpaths and drives	285
	Rigid roads	287
14	Repairs and renovations	290
	Woodworm	290
	Dry and wet rot	294
	Rising damp	295
	Superficial faults	299
	Construction defects	302
