

The Telomere

David Kipling

*Medical Research Council, Human Genetics Unit,
Western General Hospital, Edinburgh*

Oxford New York Tokyo
OXFORD UNIVERSITY PRESS
1995

Contents

1 Introduction	1
The end-replication problem	2
Potential solutions to the end-replication problem	4
Terminal hairpins	4
Recombination	6
Protein-primed replication	6
Telomerase	9
Unusual aspects of DNA sequence metabolism	10
Circular genomes	11
References	12
2 The cytology of the telomere	14
The telomere defined	14
Organization in the mitotic interphase nucleus	16
Chromosomes occupy discrete domains in the mitotic interphase nucleus	16
Telomeres and the nuclear envelope in mitotic cells	17
Implications of mitotic interphase genome organization for gene expression and replication	20
Telomere behaviour in meiosis	21
Distribution of chiasmata and implications for genetic maps	23
Summary	25
References	26
3 Telomere structure	31
Isolation and characterization of telomeric sequences	31
Direct sequencing of genomic DNA	31
Cross-hybridization as an approach to identifying telomeric sequences	32
Cloning telomeric DNA	33
Criteria for a sequence being telomeric	34
General features of telomeric sequences	36
Terminal repeat arrays	36
Subterminal sequences	43
Telomeric sequences	44
Lower eukaryotes	44
Insects	55
Vertebrates	56
Plants	56
Biophysical properties of telomeric DNA	59
The guanine tetrad	59
Intramolecular fold-back structures	61
Intermolecular structures	62

Recent advances: from models to crystals	64
Other unusual structures	64
<i>In vivo</i> significance	65
Proteins that recognize structures containing G·G base pairs	67
Summary	68
References	69
4 Telomerase	78
Identification of telomerase	78
<i>Tetrahymena</i>	78
<i>Oxytricha</i>	79
<i>Euplotes</i>	80
Humans	80
Mice	81
The RNA component of telomerase has a conserved secondary structure	81
Primer selection by telomerase	82
Telomerase can synthesize telomeric sequences <i>in vivo</i>	84
Telomerase is responsible for programmed healing <i>in vivo</i>	86
Comparison of <i>in vivo</i> and <i>in vitro</i> processivity	87
A translocation step in the telomerase reaction	88
Does telomerase exist in <i>Saccharomyces cerevisiae</i> ?	91
Summary	93
References	94
5 Telomere proteins	97
Biochemically identified proteins	98
<i>Oxytricha nova</i>	98
<i>Euplotes crassus</i>	100
<i>Stylonychia</i>	101
<i>Saccharomyces cerevisiae</i>	102
<i>Physarum polycephalum</i>	106
Vertebrates	106
Telomerase	107
Genetic screens for <i>trans</i> -acting factors in <i>S. cerevisiae</i>	108
<i>est1</i>	109
<i>cdc8</i> , <i>cdc17</i> , and <i>cdc21</i>	110
Genetic screens in other species	111
What determines telomere length?	111
Summary	113
References	113
6 Genome rearrangements and telomeres	119
Chromosome healing	119
Programmed genome rearrangements	120
The ciliate life cycle	120
Sequence analysis of the sites of breakage and healing	122
<i>Oxytricha nova</i>	122
<i>Tetrahymena thermophila</i>	122

<i>Paramecium</i>	123
Chromatin diminution in <i>Ascaris</i>	123
Non-programmed healing events in other species	124
Humans	124
<i>Plasmodium falciparum</i>	125
<i>Saccharomyces cerevisiae</i>	125
Summary	126
References	127
7 Human telomere loss, ageing, and cancer	130
Telomere loss in cultured human cells	131
Human fibroblast senescence <i>in vitro</i>	132
Human telomeres shorten with age <i>in vivo</i>	134
Telomerase and cell immortality	135
Shortened telomeres are found in some human tumours	136
Can cancer be caused by telomere loss?	136
Telomeres and cellular senescence	137
Cell mortality and the germ:soma division	138
The biology of organismal ageing	139
Summary	140
References	142
8 Chromatin structure and position effects	146
Sex and the single cell	146
The phenotype of silencing at the <i>HM</i> loci	147
The role of RAP1, ORC, and ABF1 in <i>HM</i> silencing	148
Telomeric position effects	150
Altered chromatin structure at the silent mating-type loci and telomeres	151
The biochemical nature of silenced chromatin	152
A model for telomeric position effect	154
Position effect variegation in <i>Drosophila</i>	156
The <i>in vivo</i> role of telomeric silencing	157
Telomere position effects on replication	158
Telomeres, silencers, and plasmid segregation: another associated phenotype	160
Summary	161
References	163
9 Structure and maintenance of <i>Drosophila</i> telomeres	168
Terminal deletions can be obtained in <i>Drosophila</i>	169
The rate of sequence loss is consistent with incomplete replication	170
HeT-A sequences can transfer to receding ends	171
Consequences of the retroposon model of telomere maintenance	173
How does <i>Drosophila</i> survive?	174
Similarities to and differences from telomere maintenance in yeast <i>est1</i> mutants	176
How many ways are there to replicate a telomere?	178
