Preface	vii
<b>1 A brief history of Australia's mammals</b>	<b>1</b>
Oolacunta	1
The extinction problem	2
Origins and evolution	3
<i>Part I MAMMALS AND PEOPLE IN ICE-AGE AUSTRALIA</i>	
<b>2 The Pleistocene megafauna</b>	<b>16</b>
Australia's Pleistocene bestiary	16
Some problems and controversies	30
Size and destiny	33
<b>3 What caused the megafauna extinctions?</b>	<b>36</b>
Early ideas 1860–1968	36
The modern debate	38
Overview	50
Complex hypotheses	51
Explaining extinction	53
<b>4 Two dating problems: human arrival and megafauna extinction</b>	<b>55</b>
Fixing dates on the past	55
The beginning of Australian prehistory	57
The end of the megafauna	62
<b>5 The changing environment of the Pleistocene</b>	<b>76</b>
Ice age climates	76
Vegetation and climate change	81
People, fire and vegetation	90
The last glacial cycle in perspective	94
<b>6 Testing hypotheses on megafauna extinction</b>	<b>96</b>
Timing of extinctions	96
The living and the dead	98
The power of late Pleistocene hunters	106

<b>7 The ecological aftermath</b>	115
Photographs of ghosts	116
Plant responses to megafauna extinction	121
Conclusions	129
 <i>Part II THE LATE PREHISTORIC PERIOD</i>	
<b>8 Environmental change and Aboriginal history</b>	132
The glacial maximum and the great flood	132
Population growth	136
A Holocene revolution: intensification	137
‘Fire is for kangaroos’	142
Conclusions	146
<b>9 Dingoes, people and other mammals</b>	148
History of the dingo	148
Dingoes and people	150
Mainland extinction of the thylacine and devil	153
A role for people?	159
Other mammal declines	162
The transition to <i>Terra Australis</i>	165
 <i>Part III EUROPEANS AND THEIR NEW MAMMALS</i>	
<b>10 Mammal extinction in European Australia</b>	168
The extinction pattern	168
The extinct species	175
Mammal decline and ecosystem decay	181
<b>11 What caused the recent extinctions?</b>	187
Some good ideas that don't work	188
The power of introduced predators	197
<b>12 Interactions: rabbits, sheep and dingoes</b>	207
The grey blanket	207
The sheep plague	209
Introduced herbivores versus introduced predators	210
Hyperpredation	212
Why Australia needs more dingoes	216
A complete model and its implications	222
<b>13 Conclusions</b>	228
Extraordinary predators?	229
A fragile fauna?	230
Accidents of history	233
References	237
Glossary	264
List of Illustrations	267
Index	270
