

OPERATORS AND PROMOTERS

The Story of Molecular Biology and Its Creators

HARRISON ECHOLS

Edited by Carol A. Gross

UNIVERSITY OF CALIFORNIA PRESS

BERKELEY LOS ANGELES LONDON

CONTENTS

Foreword by Arthur Kornberg xiii

Preface xv

1	BEGINNINGS: SIMPLICITY AND ELEGANCE, DNA AND PROTEIN	1
	<i>Proteins</i> 2 <i>DNA</i> 6 <i>Simple Organisms</i> 8 <i>Further Reading</i> 10	
2	THE CODE FOR LIFE: DNA TO PROTEIN	11
	<i>Genes Code for Proteins</i> 11 <i>Defining the Coding Problem: The Information People</i> 15	
	<i>DNA to RNA to Protein: The Biochemical Pathway People</i> 21 <i>Cracking the Code: Synthetic mRNA</i> 26	
	<i>The Genetic Code: God Has an Orderly Mind</i> 32 <i>Further Reading</i> 34	
3	TURNING GENES ON AND OFF: GENES THAT CONTROL OTHER GENES	35
	<i>Bacterial Growth and the Induced Synthesis of β-galactosidase: The Monod Group</i> 36	
	<i>The Problem of Lysogeny and Phage λ: The Jacob Group</i> 40 <i>Bacterial Sex and Erotic Induction</i> 45	
	<i>Turning Off Related Genes: The Road to the Repressor and the Operon</i> 49	
	<i>The Discovery of Messenger RNA</i> 56 <i>What Is the Repressor?</i> 59	
	<i>Some Comments on the Road to the Operon</i> 59	
	<i>Positive and Negative Regulation: Two Ways to Run an Operon</i> 60	

4 REPLICATING THE GENOME 65*DNA Polymerase Replicates DNA* 65 *The Problems of Replicating a Genome* 69*The Genetics of Replication* 74 *The Fine Structure of DNA Replication* 77*The "Real" Replication Enzyme Is Just Like Pol I* 81*A Simple Task That Needs Many Proteins: Priming and Elongating* 82*Special Proteins Needed for Genome Replication: Stretching, Unwinding, Untwisting* 89*Replicating Duplex DNA* 92 *Starting Genome Replication: A Special Structure* 96*Further Reading* 101**5 MAKING RNA FROM DNA 102***The Flow of Biological Information* 102 *The Transcription Enzyme: RNA Polymerase* 103*The Properties of mRNA* 105 *Developmental Pathways of Phage* 108*Lambdaology: The Developmental Biology of a Field* 110 *Lambdaology: The Developmental Biology of a Phage* 113*Lambdaology as a Community* 117 *The Lac and λ Repressors Bind to Operator DNA* 120*The Biochemistry of RNA Polymerase* 126 *Positive and Negative Regulators of the lac Operon* 129*The General View of Regulatory Proteins: 1972* 131*The Idea of Antitermination Regulation: Problems in Paradise* 132*Regulated Termination in the trp Operon: The Attenuator* 136*Transcription Termination and How to Avoid It: λ N and Q Proteins* 142*The Regulator-Operator Interaction: How to Locate a Site on DNA* 146*A New Approach to DNA Sequence and Its Recognition: Single-Cleavage Analysis* 148*Determining DNA Sequence by DNA Replication* 153 *The Molecular Study of Protein-DNA Interactions* 155

Building a Regulatory Protein: A DNA-Binding Motif 158

The Regulator-Polymerase Interaction: General Rules? 162 *Further Reading* 165

6 THE RNA WORLD: NEW PROTEINS AND REVISED RNAS 166

The Anticodon: Base-Pairs Can Wobble 167 *Base Sequence of tRNA: A Three-Leaf Clover for Holley* 168

Message Decoding: Methods and Protagonists 171 *The Problem of Starting a Protein* 172

Ending a Protein: The Value of Nonsense 175

Protein Translation Factors: Turning the Gears in Protein Synthesis 178

Using the Ribosome: GTP and Translocation 182 *The Ribosome: The Many Faces of an Enigma* 189

RNA Slicing in Bacteria 199 *RNA Splicing in Eukaryotes* 203

The Biochemistry of Splicing: Lariats on a Spliceosome 211

RNA Processing Without Proteins: Catalytic RNA 215 *Further Reading* 219

7 DNA ON ITS OWN: GENETIC RECOMBINATION 220

General Recombination and the Holliday Model 221 *Holliday Intermediates in Cells* 225

Genes and Enzymes in Bacterial Recombination 226 *The RecA Protein and Branch Migration* 228

The RecBCD Protein: Unwinding and Nicking 230 *General Recombinational Pathways: The Future* 231

Site-Specific Recombination and the Campbell Model 233 *Prophage Excision and Excisive Recombination* 237

The Biochemistry of Site-Specific Recombination 239

DNA-Protein Interactions in Site-Specific Recombination 242 *Other Site-Specific Recombinases* 245

Transposition and Replicative Site-Specific Recombination 247 *The IS Insertion Elements* 249

Mu: A Phage That Does Not Integrate Like Lambda 251

Identifying the Mu Components Needed for Transposition 254 *A Unifying Model for Transposition* 256

Transposition: Why Have It? 258 *Further Reading* 260

8	REGULATING THE REGULATORS: DEVELOPMENTAL AND SALVATIONAL DECISIONS	261
	<i>The Lysis-Lysogeny Decision by Phage λ: cII as the Master Regulator</i>	262
	<i>Regulating the Regulator: Control of cII Activity</i>	266
	<i>Molecular Decision Making: Primary and Secondary Switches</i>	268
	<i>Lifestyle Crises and Salvational Decisions</i>	273
	<i>The Heat Shock Response and Molecular Chaperones</i>	273
	<i>Heat Shock: From Cell Biology to Molecular Biology</i>	274
	<i>Regulation and Function of Heat Shock Proteins in E. coli</i>	275
	<i>Regulation of the Heat Shock Response: New Promoter Recognition by RNA Polymerase</i>	277
	<i>Regulation of the Regulator: Post-Transcriptional Control of σ^{32}</i>	279
	<i>The Heat Shock Response in Eukaryotic Cells</i>	280
	<i>Regulated DNA Repair and Mutagenesis</i>	282
	<i>The UVR Pathway of Excision Repair</i>	283
	<i>RecA-Mediated Recombinational Repair</i>	284
	<i>The SOS Response to DNA Damage</i>	286
	<i>The Biochemistry of SOS Regulation: Induction by Repressor Cleavage</i>	290
	<i>Induced Mutation in the SOS Response</i>	293
	<i>Further Reading</i>	295
9	MAKING DNA FROM RNA: THE STRANGE LIFE OF THE RETROVIRUS	296
	<i>Quantitative Animal Virology: The Plaque and Focus Assays</i>	297
	<i>Making DNA from RNA</i>	300
	<i>The Path from Virus to Provirus and Back Again</i>	301
	<i>The Wild Ride of Reverse Transcriptase</i>	306
	<i>The Retrovirus and Its Cancer Gene</i>	308
	<i>Retroviruses as Transposons</i>	312
	<i>The HIV Retrovirus</i>	314
	<i>Further Reading</i>	317

<i>The Social Context for Basic Research in Biology</i>	318	<i>A Biological Revolution from the Unpredictable</i>	319
<i>Hitchhiking Genes and Multiplying Vectors</i>	319		
<i>Biological Roots: Phage with Bacterial Genes and Cohesive Sites</i>	321		
<i>Biological Roots: Restriction Enzymes for Pieces of DNA</i>	327	<i>The Engineered Joining of DNA Molecules</i>	333
<i>DNA Cloning: Amplification of Foreign DNA by a Plasmid Vector</i>	338		
<i>Safety Concerns and Regulatory Policy</i>	340		
<i>Genetic Engineering: A Giant Leap for Eukaryotic Molecular Biology</i>	344		
<i>The Industrial and Medical Ramifications of Genetic Engineering</i>	347	<i>Further Reading</i>	349
<i>Afterword by Tom Cech</i>	350		
<i>Timeline</i>	352	<i>Glossary</i>	359
<i>Notes</i>	379	<i>Name Index</i>	453
		<i>Subject Index</i>	458
