Inorganic substances

A prelude to the study of descriptive inorganic chemistry

DEREK W. SMITH

Associate Professor and Chairperson of Chemistry Department University of Waikato, Hamilion, New Zealand

Cambridge University Press

Cambridge New York Port Chester Melbourne Sydney

 2.3 Vibrational spectroscopy 2.4 Nuclear magnetic resonance (NMR) spectroscopy 2.5 Rotational spectroscopy 2.6 Electronic spectroscopy 	29
2.4 Nuclear magnetic resonance (NMR) spectroscopy2.5 Rotational spectroscopy2.6 Electronic spectroscopy	30
2.5 Rotational spectroscopy2.6 Electronic spectroscopy	35
2.6 Electronic spectroscopy	48
	55
	57
2.7 Photoelectron spectroscopy	65
2.8 Magnetic susceptibility and electron spin resonance (ESR)	71
2.9 Miscellaneous methods	81
2.10 Further reading	84
3 Nomenclature, notation and classification of inorganic	
substances	86
3.1 Elements, atoms, molecules and substances	86
3.2 Names and formulae	88
3.3 Classification of inorganic substances	90
3.4 Coordination and organometallic compounds	104

Contents

3.5	Further reading	107
4	Periodicity and atomic properties	108
4.1	The Periodic Table	108
4.2	Radii: the sizes of atoms and ions	115
4.3	Ionisation potentials and electron affinities (or ionisation	
	energies and electron attachment energies)	124
4.4	Electronegativity	132
4.5	Further reading	137
5	The occurrence of simple ions $\mathbf{E}^{n\pm}$ in crystals and solutions	138
5.1	Lattice energies	138
5.2	Thermochemical treatments of some ionic solids	143
5.3	Ionic or covalent bonding?	156
5.4	Energetics of simple ions in solution	159
5.5	The hydrolysis of cations in aqueous solution	171
5.6	Further reading	176
6	Covalent bonding in Main Group chemistry: a VB	
	approach	177
6.1	Valence bond theory and the 'octet rule': obedience and	
	violation	177
6.2	Covalent bond energies	
6.3	Covalent bonding schemes for Main Group atoms	190
6.4	Unstable covalent species	205
6.5	Further reading	211
7	Molecular orbital theory in inorganic chemistry	212
7.1	Introduction: orthogonality of wave functions	212
7.2	Diatomic molecules	215
7.3	Polyatomic molecules AB _n	233
7.4	Three-centre bonds	242
7.5	MO theory of bonding in metallic substances	256
7.6	Metallic versus covalent bonding in elemental substances	266
7:7	Further reading	272
8	Coordination and organometallic compounds of the	
_	transition elements	273
8.1	Introduction: ligands	273
8.2	Bonding theories in coordination/organometallic	
	chemistry	282
8.3	Coordination numbers and geometries	292
8.4	Some thermodynamic aspects	298
8.5	'Metal-metal' bonds and cluster compounds	304

	Contents	vii
8.6	Electron-counting and isolobal relationships	3 11 [·]
8.7	Further reading	318
9	Inorganic reactions and their mechanisms	319
9.1	Introductory remarks	319
9.2	Donor-acceptor reactions	319
9.3	Acids, bases and solvents	327
9.4	Redox reactions in polar solvents	332
9.5	Substitution reactions	338
9.6	Oxidative addition reactions	348
9.7	Insertion reactions	351
9.8	Catalysis by coordination/organometallic compounds in	
	industry and biology	352
9.9	Further reading	360
10	The preparation of inorganic substances	361
10.1	Introductory remarks.	361
10:2	Elemental substances	362
10.3	Hydrides and halides	366
10.4	Coordination compounds	374
10.5	Organometallic compounds	378
10.6	Preparation of compounds containing $Si=Si$ and $P=P$	
	bonds	384
10.7	Further reading	387
	Appendix The literature of descriptive inorganic	
	chemistry	388
	Index	392
