

F. Cramer

Chaos and Order

The Complex Structure of Living Systems

Foreword by I. Prigogine

Translated by
D. I. Loewus

Weinheim · New York · Basel · Cambridge · Tokyo

Table of Contents

Foreword V

To the Reader XIII

Acknowledgments XV

1. Life – A Dynamical System between Order and Decay 1

A conversation between Georg Christoph Lichtenberg and Bottom on chaos and order 1

Strategies of Order – The Blueprints of Life 3

Forms 3

Cells 7

Molecules 10

Disassembly and Reassembly 13

The High Degree of Order in Living Systems Is an Extremely Improbable State 14

The Improbable Edifice of Life 14

Hiking along a Mountain Ridge Is Possible 16

Dissipative Structures – The Generation of Forms by Consumption of Energy 18

Cycles – Everything Flows 20

Heredity – The Material Flow of Tradition 20

The Double Helix – Molecular Information 23

Proteins – Costly Precision Work 27

Order in Living Systems Is Understandable in Principle. But Do We Really Understand It? 30

Conrad Ferdinand Meyer: The Roman Fountain 31

2. Biochemistry – Gain through Chaos 32

A dialogue between Georg Christoph Lichtenberg and Alice on what is real and what is false 32

Protein Biosynthesis – A Strategy to Avoid Chaos and to Gain Control 34

Protein Quakes – Internal Strains Are Released in a Chaotic Fashion and Serve a Functional Role 39

Cells Talk to Each Other – But There Are Occasional Misunderstandings 41

Fertilization – After Two Partners Have Found Each Other, Their Germ Cells Must Find Each Other, Too 41

Morphogenesis – Cell Surfaces Fit Together Like LEGO Blocks 43

Cancer Metastases – The Invasion of Foreign Cells 44

Nonlinearity of Cell-Cell Contacts – A Wisp of Chaos 45

Mutation – Gain through Error 46

Edmund Blunden: The Survival 49

3. Genes, Genetic Maps, Gene Therapy – A Problem of Complexity 50

A dialogue between Johann Wolfgang von Goethe and Charles Darwin on evolution and on what is natural and what is divine 50

Genes Can Be Taken Apart and Put Back Together 56

Genes Can Be Read 59

Genes Can Be Synthesized in a Test Tube 61

Genes Can Be Modified and Put Back into an Organism 61

Genetic Engineering – What Is Technically Feasible? – A Positive and Negative Catalog 63

Modified Functions – New Enzymes 63

Protein Production 64

New Microorganisms 64

New Plants 66

New Animals 67

Gene Therapy – What Is Medically Feasible in Man? 69

Genetic Analysis 69

Gene Implantation 71

Gene Therapy Is a Violation of the Personal Rights of Future Human Beings 72

The Limits of Gene Therapy – The Temptations of Knowledge 74

Why in Vitro Fertilization? 74

Genes and Society 75

Not Everything Is Biology – Biology Is Not Everything 76

The Relation between Biological and Intellectual Information – Some Simple Arithmetic 76

What Responses Does the Challenge of Modern Science Evoke? 76

Ezra Pound: With Usura 80

4. Evolution – Phylogenetic Trees and Lightning 82

A dialogue between Georg Christoph Lichtenberg and Albert Einstein on causality, fulgurations, and whether the world is determinable 82

The Evolution of Species – Phylogenetic Trees 85

Molecular Evolution – Eigen's Theory of Hypercycles 89

The Evolutionary Theory of Knowledge – What Is Knowable? 94

The Two Sides of the Looking Glass 94

Evolution as Ideology: Evolutionism 95

Phylogenetic Trees with Feedback for Fine-Tuning 96

The Ontogenesis of Nematodes 97

Blood Clotting 97

Generation of Antibodies by Clonal Selection 97

Amplification of Enzymes by Activation Cascades 100

Trees and Lightning 101

Structure and Fluctuations – Prigogine's Theorem 106

Emily Dickinson: The farthest Thunder that I heard 111

5. Mathematical and Physical Models of Deterministic Chaos 112

A dialogue between Georg Christoph Lichtenberg and Ludwig Wittgenstein on logic, chaos, and the properties of living systems 112

What Is Chaos? Bifurcation Points of Dissipative Structures 115

Morphogenesis and Catastrophe Theory 117

The Three-Body Problem – The Double Pendulum 119

The Rings of Saturn 122

Fractal Dimensions 126

Wallace Stevens: Connoisseur of Chaos 130

6. The World Is Harmonic 132

Heinrich von Kleist recounts a conversation with the maître de ballet C. on puppet theater 132

The Harmony of the Spheres – Kepler Was Right After All 135

Mandelbrot Figures – The Beauty of Fractals 137

Why Is Nature Beautiful? On Blossoms and Fruits 143

Fragile Beauty – A New Artistic Norm 152

Palindromes – Islands of Order in the Genetic Script 155

Paul Celan: Psalm 158

7. Big Bang – Idea or Matter? 159

A dialogue between Werner Heisenberg and Wolfgang Pauli on physics, metaphysics, and religion 159

The Big Bang – A Real, Physical Event? 162

Newton and Darwin 164

The Complexity of Living Things 167

Self-organization 168

 Self-organization through Inherent Properties 168

 Self-organization in Ontogenesis 168

 True Self-organization 171

 Self-organization as a Physical Principle 171

The Evolutionary Field 173

The Concept of Matter Must Be Revised 177

God's Creation 179

Roald Hoffmann: Autumn Entelechies 182

8. Aging and Death – Our Time 184

A dialogue between Socrates and his student Krebs on death and on life after death 184

Classical Physics – The Exclusion of Time 187

Time and Entropy – “Processual” Time 189

Aging and Death – A Biochemical Problem? 194

Aging – Fate or Disease? 200

Dürer's Mother – Thoughts on the Dignity of Old Age 201

William Butler Yeats: Sailing to Byzantium 205

9. Fundamental Complexity – Intrinsic Limitations 206

A dialogue between Georg Christoph Lichtenberg and Prince Hamlet on the intrinsic limitations and the insular nature of our knowledge and existence 206

What Is Meant by Complex? 210

 Definition of Complexity 210

 Degrees of Complexity – Fundamental Complexity 212

Zeitgeist and Evolution – Thoughts on the Relation of History and Natural History 219

Departure from Intrinsic Truths – On the Impossibility of Proving Proofs 224

Some Consequences for Our Society and for Future Research 228

 Freedom and Arbitrariness – Trust Is a Principle After All 228

 Evolutionary Biology as an Object of Research 229

 Our Brain – A Complex Organ for the Reduction of Complexity 229

 At the Boundaries of Science 231

We Island Dwellers – The Beautiful Life on the Archipelago 232

Friedrich Hölderlin: Mnemosyne III 233
