<i>Preface</i>	page ix
<i>List of symbols</i>	xi
<b>1 Introduction to the cell</b>	1
1.1 Designs for a cell	4
1.2 Cell shapes, sizes and structures	9
1.3 Biomaterials: soft strings and sheets	15
1.4 Forces inside and outside the cell	19
Summary	23
<b>2 Soft materials and fluids</b>	25
2.1 Fluctuations at the cellular scale	25
2.2 Movement in a viscous fluid	30
2.3 Random walks	37
2.4 Diffusion	41
2.5 Fluctuations and correlations	47
Summary	51
Problems	54
<b>Part I Rods and ropes</b>	<b>61</b>
<b>3 Polymers</b>	63
3.1 Polymers and simple biofilaments	63
3.2 Mathematical description of flexible rods	68
3.3 Sizes of polymer chains	75
3.4 Entropic elasticity	80
3.5 Buckling	85
3.6 Measurements of bending resistance	90
Summary	97
Problems	98
<b>4 Complex filaments</b>	105
4.1 The structure of complex filaments	106
4.2 Torsion, twist and writhe	110
4.3 Measurements of torsional rigidity	118
4.4 Stretching of folded polymers	123

4.5 Protein and RNA folding – concepts	127
4.6 Models for polymer folding	133
Summary	142
Problems	144
<b>5 Two-dimensional networks</b>	<b>151</b>
5.1 Soft networks in the cell	151
5.2 Elasticity in two dimensions	156
5.3 Isotropic networks	163
5.4 Networks with low coordination number	168
5.5 Membrane-associated networks	173
Summary	180
Problems	182
<b>6 Three-dimensional networks</b>	<b>194</b>
6.1 Networks of biological rods and ropes	194
6.2 Elasticity in three dimensions	199
6.3 Entropic networks	205
6.4 Network percolation and failure	209
6.5 Semiflexible polymer solutions	214
6.6 Rheology of cytoskeletal components	221
Summary	229
Problems	230
<b>Part II Membranes</b>	
	<b>241</b>
<b>7 Biomembranes</b>	<b>243</b>
7.1 Membranes, walls and lamina	243
7.2 Self-assembly of amphiphiles	250
7.3 Bilayer compression resistance	257
7.4 Bilayer bending resistance	263
7.5 Edge energy	268
7.6 Cell walls and sheaths	274
Summary	280
Problems	282
<b>8 Membrane undulations</b>	<b>292</b>
8.1 Thermal fluctuations in membrane shape	292
8.2 Mathematics of curvature	294
8.3 Membrane bending and persistence length	299
8.4 Scaling of polymers and membranes	305
8.5 Measurement of membrane undulations	313
Summary	319
Problems	321

<b>9 Intermembrane and electrostatic forces</b>	326
9.1 Interactions between membranes	326
9.2 Charged plate in an electrolyte	330
9.3 van der Waals and electrostatic interactions	337
9.4 Entropic repulsion of sheets and polymers	346
9.5 Adhesion	352
Summary	361
Problems	363
<b>Part III The whole cell</b>	<b>371</b>
<b>10 The simplest cells</b>	373
10.1 Cell shapes	373
10.2 Energetics of thin shells	375
10.3 Pure bilayer systems	381
10.4 Vesicles and red blood cells	390
10.5 Bacteria	397
Summary	403
Problems	405
<b>11 Dynamic filaments</b>	412
11.1 Movement in the cell	412
11.2 Polymerization of actin and tubulin	418
11.3 Molecular motors	428
11.4 Forces from filaments	435
11.5 Cell propulsion	439
Summary	446
Problems	448
<b>12 Growth and division</b>	454
12.1 Overview of the division cycle	455
12.2 Growth of rods and cocci	462
12.3 Asymmetry and asynchrony in cell division	469
12.4 Transcription and replication	476
12.5 Forces arising in cell division	485
Summary	490
Problems	492
<b>13 Signals and switches</b>	496
13.1 Axons and the action potential	496
13.2 Signal propagation in nerves	503
13.3 Rate equations: switches and stability	509
13.4 Molecular basis of regulation	513

Summary	520
Problems	523
<i>Appendix A Animal cells and tissues</i>	525
<i>Appendix B The cell's molecular building blocks</i>	531
<i>Appendix C Elementary statistical mechanics</i>	539
<i>Appendix D Elasticity</i>	546
<i>Glossary</i>	554
<i>References</i>	565
<i>Index</i>	603
