

Cell and Molecular Biology of Wood Formation

R.A. SAVIDGE

*Faculty of Forestry and Environmental Management, University of New Brunswick,
Canada*

J.R. BARNETT

Department of Botany, University of Reading, UK

R. NAPIER

HRI Wellesbourne, Warwick, UK

Contents

Contributors	xiii
Preface	xix
1 Biochemistry of seasonal cambial growth and wood formation — an overview of the challenges	1
<i>R.A. Savidge</i>	
Introduction	1
Practical significance of biochemistry research into cambial growth	2
Woods: chemically heterogeneous biosynthetic end products	6
General and specific pathways of development during wood formation	11
Distinguishing and isolating cells of the cambial region	14
Manipulating cells of the cambial region	22
Some of the research challenges	24
Conclusions	27
References	28
2 Cytoskeleton, cell walls and cambium: new insights into secondary xylem differentiation	31
<i>N.J. Chaffey</i>	
Introduction	31
Role of the cytoskeleton in wood formation	32
A cytoskeletal approach to designer wood	38
The future	39
References	40
3 Ethylene, oxygen and carbon dioxide in woody stems during growth and dormancy	43
<i>L. Eklund and A. Klintborg</i>	
Introduction	43
Methods for sampling, identification and quantification of carbon dioxide, oxygen and ethylene	44
The source of carbon dioxide, oxygen and ethylene	46
Physiological effects of carbon dioxide, oxygen and ethylene	49
Conclusions and perspectives for the future	52
References	53
4 Cambial coniferin content as an indicator of the health status of conifers	57
<i>V.J. Steeves and R.A. Savidge</i>	
Introduction	57
Materials and methods	58
Results and discussion	60
References	64

5	Seasonal variation in the K, Ca and P content and distribution of plasma membrane H ⁺ -ATPase in the cambium of <i>Populus trichocarpa</i>	67
	<i>M. Arend and J. Fromm</i>	
	Introduction	67
	Seasonal variation in the fine structure of the vascular cambium	67
	Seasonal changes of the K, Ca and P content in the cambium	68
	Immunolocalization of PM-H ⁺ ATPase activity in the cambium	69
	Conclusions	69
	References	70
6	Photosynthate allocation to the vascular cambium: facts and problems	71
	<i>J.J. Sauter</i>	
	Introduction	71
	The structural relationship of rays and cambium	72
	Accumulation pattern of storage materials and flow rates of sugars and N-compounds	74
	Sucrose synthase activity of the cambium zone	80
	References	81
7	Symplasmic organization of the transport phloem and the implications for photosynthate transfer to the cambium	85
	<i>A.J.E. van Bel and K. Ehlers</i>	
	Introduction	85
	The different tasks of the phloem in seed plants	85
	Ultrastructure of the companion cells in dicotyledons	87
	Translocation of photosynthate and lateral release from the transport phloem in dicotyledons	88
	Experimental assessment of the symplasmic organization of the transport phloem	88
	The organization of the transport phloem and the post-phloem pathways	92
	Conclusions on the symplasmic organization of transport phloem	93
	The battle for photosynthates in the apoplast and the consequences for photosynthate supply to the cambium	94
	Speculations on the consequences of the phloem design for photosynthate allocation between axial and terminal sinks	95
	Concluding remarks	96
	References	97
8	Water and solute relations of the carrot cambium studied at single-cell resolution	101
	<i>D. Tomos, A. Korolev, J. Farrar, K. Nicolay, R. Bowtell and W. Köckenberger</i>	
	Introduction	101
	Techniques of study	103
	Results	105
	Discussion	109
	References	110

9	Influence of sucrose on cambial activity <i>D. Krabel</i>	113
	Introduction	113
	Species investigated and general approach	115
	Dynamics of sucrose concentration in cambial tissue	115
	Identification and characterization of cambial derivatives	121
	Conclusions	122
	References	122
10	Dark fixation by the cambium and its derivatives <i>N.A. Forneris and R.A. Savidge</i>	127
	Introduction	127
	Sources of carbon dioxide	130
	Enzymes of dark fixation	132
	Dark fixation in the pine cambium	134
	Implications of dark fixation	135
	Conclusion	137
	References	137
11	Wood formation in hybrid aspen (<i>Populus tremula</i> L. × <i>Populus tremuloides</i> Michx.) grown under different nitrogen regimes <i>L. Puech, S. Türk, J. Hodson and S. Fink</i>	141
	Introduction	141
	Materials and methods	142
	Results	144
	Discussion	149
	References	152
12	The formation of cambium from callus in grafts of woody species <i>J.R. Barnett and A.K. Asante</i>	155
	Introduction	155
	The anatomy of the developing graft union	155
	Factors involved in cambium formation	162
	Consequences for understanding of the cambium	164
	References	165
13	Cambial growth and auxin gradients <i>B. Sundberg, C. Ugglå and H. Tuominen</i>	169
	Introduction	169
	IAA and cambial growth	169
	Earlier models explaining the role of IAA in seasonal and spatial control of cambial growth	172
	Towards a new concept of the role of IAA in cambial growth	172
	Spatial and seasonal variation of IAA and its control of cambial growth patterns — a new model	177
	Some aspects on IAA homeostasis in cambial region tissues	180
	Summary	182
	References	182

14	UDPG: coniferyl alcohol glucosyltransferase and coniferin biosynthesis — a regulatory link to seasonal cambial growth in conifers <i>H. Förster, V. Steeves, U. Pommer and R.A. Savidge</i>	189
	Introduction	189
	Coniferin biosynthesis and metabolism	190
	UDPG:coniferyl alcohol glucosyltransferase activity in <i>Pinus strobus</i>	195
	Conclusions and outlook	198
	References	198
15	Isolation of cambium-specific genes from <i>Eucalyptus globulus</i> Labill. <i>G. Bossinger and M.A. Leitch</i>	203
	Introduction	203
	Methods and results	203
	Summary	205
	References	207
16	Cambial activity and xylem differentiation in walnut (<i>Juglans</i> sp.) <i>P. Label, I. Beritognolo, P. Burtin, L. Dehon, I. Couée, C. Breton, J.-P. Charpentier and C. Jay-Allemand</i>	209
	Introduction	209
	Cambial activity	210
	Construction of a cDNA library from active cambium	210
	Cloning of genes involved in cell cycle control	211
	Xylem differentiation	212
	Heartwood formation	214
	Extractives accumulation	215
	Gene expression during heartwood formation	217
	References	219
17	Hormonal control of vascular differentiation in plants: the physiological basis of cambium ontogeny and xylem evolution <i>R. Aloni, P. Feigenbaum, N. Kalev and S. Rozovsky</i>	223
	Introduction	223
	Control of vascular differentiation by flow of signals	223
	Control of the vascular meristem: from procambium to cambium	224
	Tracheids with perforations	226
	From tracheids to vessels and fibres	227
	The control of vessel endings	228
	Control of wood formation in diffuse-porous vs. ring-porous trees	230
	Role of roots in vascular differentiation	232
	Summary	232
	References	233
18	Inductive effects of conifer needles on xylogenesis—auxin not the explanation <i>R.A. Savidge</i>	237
	Introduction	237
	Recent developments	243
	More on IAA versus the tracheid-differentiation factor from mature needles	249
	Conclusions	252
	References	253

19	The role of cytoskeleton in secondary xylem differentiation in conifers	255
	<i>R. Funada, O. Furusawa, M. Shibagaki, H. Miura, T. Miura, H. Abe and J. Ohtani</i>	
	Introduction	255
	Materials and methods	256
	Cortical microtubules in conifers	257
	Actin filaments in conifers	261
	References	262
20	Development of fibre and parenchyma cells in culms of bamboo (<i>Phyllostachys viridi-glaucescens</i> (Carr.) Riv. & Riv.) with emphasis on the cytoskeleton during cell wall deposition	265
	<i>E. Crow, R.J. Murphy and D.F. Cutler</i>	
	Introduction	265
	Materials and methods	266
	Results	268
	Conclusions	273
	References	275
21	Proteases in relation to the earliest stage of xylogenesis in <i>Pinus banksiana</i> Lamb. stems	277
	<i>I. Iliev and R. Savidge</i>	
	Introduction	277
	Historical perspective	278
	Materials and methods	279
	Results and discussion	281
	References	287
22	Pectin remodelling during cambial derivative differentiation	289
	<i>M.L. Follet-Gueye, F.F. Ermel, B. Vian, A.M. Catesson and R. Goldberg</i>	
	Introduction	289
	Materials and methods	290
	Results and discussion	290
	Conclusion	293
	References	293
23	Pectin methylesterases: possible markers for cambial derivative differentiation?	295
	<i>F. Micheli, M. Bordenave and L. Richard</i>	
	Introduction	295
	First evidence for the involvement of PME _s in cambial derivative differentiation: biochemical and ultrastructural changes	296
	Novel approaches for studying the PME _s in cambial derivative differentiation	297
	PME _s : early markers of cambial derivative differentiation?	302
	References	302

24	The structure of pectin methyl esterase: the relevance of parallel β helix proteins to xylem differentiation	305
	<i>P.W. Goodenough and C.E. Carter</i>	
	Introduction	305
	The discovery of the parallel β helix	305
	Structures of other enzymes binding pectate/pectin	307
	Predictions of an idealized parallel β sheet coil and its relevance to pectin methyl esterase	309
	Can pectin methyl esterase be modelled onto pectin/pectate lyase?	310
	Parallel β strand structure of PME	311
	The significance to xylem development	312
	Conclusion	313
	Future research	313
	References	313
25	Cellular patterns in dicotyledonous woods: their regulation	315
	<i>S. Lev-Yadun</i>	
	Introduction	315
	Wood anatomy	316
	Regulation	317
	References	322
26	The commercial cambium: understanding the origin of wood property variation	325
	<i>G.M. Downes, R. Evans, L.R. Schimleck and H.C. Fritts</i>	
	Introduction	325
	Within-tree variation in density, pulp yield and dollars	326
	Automated assessment of wood properties	327
	Dendrometer measurements and cambial growth	328
	Relating growth patterns to wood properties	330
	Models as an interface	331
	Conclusion	333
	References	334
27	Variation of the properties of tracheids in Norway spruce (<i>Picea abies</i> [L.] Karst.)	337
	<i>P. Saranpää, E. Pesonen, M. Sarén, S. Andersson, S. Siiriä, R. Serimaa and T. Paakkari</i>	
	Introduction	337
	Materials and methods	338
	Results and discussion	342
	Conclusions	344
	References	344
28	Distribution, fluctuation and metabolism of food reserves in the wood of trees	347
	<i>W. Höll</i>	
	Introduction	347
	Distribution and seasonal fluctuations in carbohydrates	348
	Distribution and seasonal fluctuations in fat reserves	353
	Experimental procedures	359
	References	361

29	Biochemistry and physiology of heartwood formation	363
	<i>E.A. Magel</i>	
	Introduction	363
	Distribution of heartwood phenolics and their relation to 'pseudo lignification'	364
	<i>In situ</i> synthesis of heartwood extractives at the sapwood-heartwood transition zone	367
	Source of carbon-skeletons for the biosynthesis of heartwood extractives	368
	Conclusion	371
	References	373
30	Valuable wood as a result of abnormal cambial activity — the case of <i>Betula pendula</i> var. <i>carelica</i>	377
	<i>P. Velling, A. Viberä-Aarnio, R. Hagqvist and J. Lehto</i>	
	Introduction	377
	Geographical distribution of curly birch	380
	Formation of curly-grained wood	380
	Inheritance, breeding and production of cultivation material	383
	Cultivation	383
	References	384
31	Heterogeneous, branched, zigzag and circular vessels: unexpected but frequent forms of tracheary element files, description – localization – formation	387
	<i>J.P. André</i>	
	Introduction	387
	Circular vessels	388
	Zigzag vessels	389
	Branched vessels	391
	Heterogeneous vessels	392
	Discussion and conclusion	393
	References	395
32	Plant laccases: are they involved in lignification?	397
	<i>P. Ranocha, D. Goffner and A.M. Boudet</i>	
	Introduction	397
	Laccases, ubiquitous enzymes with multiple putative functions	397
	Plant laccases and lignification	400
	Conclusion	406
	References	407
33	Cell-wall-associated proteins and wall biogenesis in developing compression and non-compression woods	411
	<i>G.J. McDougall</i>	
	Introduction	411
	Materials and methods	413
	Results	415
	Discussion	419
	References	422
