Contents

Preface	xv	Use of Transitional Solvents	27
Acknowledgments	xvii	Infiltration of Resin	27
		Embedding	28
CHAPTER 1		Epon Embedding	28
The Past, Present, and Future of Electron		Measuring Embedding Media	28
Microscopy	2	Mixing Embedding Media	29
Historical Perspective	4	Other Embedments and Their Use	29
Development of the Electron Microscope	7	Epoxy Resin 812	29
Development of Preparative Techniques	9	Araldite	29
Contributions to Biology and the Future of		Spurr's	30
Electron Microscopy	10	LR White	30
Journals Devoted Primarily to Electron		Low Pressure Removal of Solvents	
Microscopy	10	and Air Bubbles	30
Selected Journals Publishing Electron		Curing of the Embedment	30
Micrographs	11	Embedding Containers	31
References	11	Embedding Labels	31
		Removal of Tissue Supports	31
		Special Tissue Preparative Needs	32
CHAPTER 2		Cell Fractions	32
Specimen Preparation for Transmission		Tissue Culture Cells	33
Electron Microscopy	14	Suitable Containers for Tissue Processing	35
Fixation	16	Rapid Tissue Processing Protocols	35
The Mechanism of Chemical Fixation		Automatic Tissue Processors	36
for Electron Microscopy	16	Tissue Volume Changes During Specimen	
Glutaraldehyde	16	Preparation	36
Osmium Tetroxide	18	Judging Adequate Specimen Preparation	36
Selection of a Fixative and a Buffer	19	References	37
Fixative	19		
Buffers	19		
Obtaining and Preparing Buffered		CHAPTER 3	
Glutaraldehyde Fixative	20	Specimen Preparation for Scanning	
Obtaining and Preparing Osmium		Electron Microscopy	40
Fixative	21	Surface Cleaning	42
Immersion and Perfusion Fixation	21	How to Remove Surface Coatings	42
Immersion	22	Buffers and Fixatives	42
Perfusion Fixation	23	Working with Individual Cells or	
Fixation Conditions	24	Macromolecules	44
Popular Fixation Protocols Other		Rinsing and Dehydration	45
Than Glutaraldehyde—Osmium		Specimen Drying Techniques	46
Tetroxide	24	Critical Point Drying	46
Karnovsky's Fixative	24	Safety Precautions with Critical	
Osmium-reduced Ferrocyanide	25	Point Drying	47
Potassium Permanganate	25	Freeze-Drying	48
Fixative Additives	25	Freeze-Drying Procedure	48
Fixation of Plant Tissues	26	Alternative Drying Procedures	49
Washing	26	Fluorocarbon Drying Procedure	49
Dehydration	27	Specimen Fracturing Procedures	50

Cryofracturing	50	Diamond and Sapphire Knives	78
Cryofracturing Procedure of Tanaka	51	Cleaning Diamond Knives	79
Dry Fracturing	53	Histo Knives	80
Replication Procedures	53	Trough Fluids	80
Negative Surface Replication Using		Grids and Specimen Supports	80
Cellulose Acetate Film	54	Grids	80
Cellulose Acetate Negative		Handling Grids	82
Replication Procedure	54	Support Films for Grids	83
Negative/Positive Replication Using		Plastic Films	83
Silicone, Resin	54	Pure Carbon Films	86
Silicone, Resin Positive/Negative		The Ultramicrotome and the Sectioning	
Replication Procedure	54	Process	86
Corrosion Casting of Animal		Development of the Ultramicrotome	86
Vasculatures	55	Basic Features of All Ultramicrotomes	87
Corrosion Cast Replication		The Sectioning Process	87
Procedure	56	General Steps in Ultramicrotomy	87
Specimen Mounting	56	Water Level Adjustment	89
Criteria for Selecting Specimen		Clearance Angle Adjustment	89
Adhesives	56	Knife Advancement	89
Specimen Coating for Conductivity	58	Specimen Orientation	90
Sputter Coating Procedure	58	Knife Contact	91
Estimation of Coating Thickness	59	Ultrathin Sectioning	91
Potential Problems Associated with		Section Retrieval	92
Sputter Coating	60	Collecting Serial Sections onto Single	
Noncoating Techniques	60	Hole or Slot Grids	94
Tannic Acid/Osmium Noncoating		Factors Affecting Sectioning	95
Technique	60	Methodical Sectioning	96
Specimen Storage	61	A Guide to Sectioning Problems and	
References	62	Causes	97
		Cryoultramicrotomy	97
		Dry Knife, Dry Retrieval Method	98
		Dry Knife, Wet Retrieval Method	100
		Example of the Use of Frozen	
		Sections in an Immunocytochemical	
		Localization Procedure	104
		References	106
CHAPTER 4		CHAPTER 5	
Ultramicrotomy	64	Specimen Staining and Contrast Methods	
Shaping the Specimen Block	66	for Transmission Electron Microscopy	108
Rough Trimming by Hand	66	Positive Staining	110
Shaping the Block Using Razor		The Physical Basis of Contrast	111
Blades	66	Preembedding, Positive Staining with	
Rough Trimming by Machine	67	Uranyl Salts	111
The Mesa Trimming Procedure	70	Preembedding Staining Procedure	111
Thick Sectioning	70	Postembedding Staining with Uranyl	
Fine Trimming	72	Salts	112
Types of Ultramicrotome Knives	72	Staining Trimmed Specimen	
Glass Knives	74	Blocks	112
Preparing Glass Knives with a			
Commercial Knifemaker	75		
Manually Crafted Knives	75		
Breaking Glass Knives by Hand	75		
Evaluation of Glass Knives	75		
Attachment of Water Trough			
or Boat	77		

Staining Trimmed Specimen Blocks in Uranyl Acetate	112	Defects in Lenses	143
Staining Ultrathin Sections with Uranyl Salts	112	Magnification	146
Helpful Suggestions when Staining	113	Design of the Transmission Electron Microscope	147
Staining-Methods for Alcoholic Solutions of Uranyl Salts	115	Comparison of Light Microscope to Transmission Electron Microscope	147
Postembedding Lead Staining	115	Basic Systems Making Up a Transmission Electron Microscope	147
Reynolds' Lead Citrate	115	Illuminating System	147
Preparation and Use of Reynolds' Lead Citrate Stain	115	Specimen Manipulation System	156
Preparing CO ₂ -Free Water	116	Imaging System	158
Other Methods for Lead Citrate Staining	117	Vacuum System	163
Staining Many Grids	118	Vacuum Terminology	163
Negative Staining	118	Vacuum Problems and Safety Features	168
Commonly Used Negative Stains	118	Other Types of Vacuum Pumps	169
Preparation of Three Commonly Used Negative Stains	118	Preparing the Transmission Electron Microscope for Use	170
Negative Staining Procedures	120	Alignment Theory	170
Metal Shadowing Techniques	121	Alignment Practice	171
Metal Evaporation Procedures	121	Major Operational Modes of the Transmission Electron Microscope	173
Vacuum System	121	High Contrast	173
Methods for Metal and Carbon Evaporation	122	How to Obtain High Contrast	173
Some Applications of Metal Shadowing and Negative Staining	125	High Resolution	175
Making Height Measurements		Darkfield	176
Using Metal Shadowing	125	Diffraction	176
Replication of Biological Surfaces for Transmission Electron Microscopy	126	Diffraction Practices	177
Preparing Single-Stage Replicas	127	Checking Performance	177
Preparing Two-Stage, Negative Replicas	128	Alignment	177
Visualizing Macromolecules	129	Electrical Stability	178
DNA Spreading and Shadowing Technique	130	Image Drift	178
