# Contents

## Chapter 1

Communities on Submerged Hard Bodies.....	1
1.1 Organisms and Communities Inhabiting the Surfaces of Hard Bodies.....	1
1.2 The Phenomenon of Concentration of Organisms on the Surfaces of Hard Bodies.....	9
1.3 Biofouling as a Source of Technical Obstacles.....	14

## Chapter 2

Biofouling as a Process.....	25
2.1 Colonization.....	25
2.2 Primary Succession.....	28
2.3 Recovery Successions. Self-Assembly of Communities.....	35

## Chapter 3

Temporary Planktonic Existence.....	41
3.1 Release of Propagules into Plankton.....	41
3.2 Buoyancy and Locomotion of Propagules.....	43
3.3 Taxes and Vertical Distribution of Larvae.....	48
3.4 Offshore and Oceanic Drift.....	52

## Chapter 4

Settlement of Larvae.....	57
4.1 The Reasons for Passing to Periphytonic Existence.....	57
4.2 Taxes and Distribution of Larvae during Settlement.....	59
4.3 Sensory Systems Participating in Substrate Selection.....	63
4.4 Selectivity during Settlement.....	69

## Chapter 5

Induction and Stimulation of Settlement by a Hard Surface.....	75
5.1 Types of Induction and Stimulation of Settlement.....	75
5.2 Distant Chemical Induction.....	77
5.3 Contact Heterospecific Chemical Induction.....	79
5.4 Conspecific Chemical Induction and Aggregations.....	81
5.5 Stimulation of Settlement, Attachment, and Metamorphosis by Microfouling.....	85
5.6 The Influence of Physical Surface Factors on Settlement.....	93
5.7 Combined Influence of Surface Factors on Settlement. The Hierarchy of Factors.....	96
5.8 Settlement on the Surfaces of Technical Objects.....	100

## **Chapter 6**

Attachment, Development, and Growth.....	103
6.1 Attachment of Microorganisms .....	103
6.2 Mechanisms of Attachment of Larvae and Spores of Macroorganisms.....	112
6.3 Natural Inductors of Settlement, Attachment, and Metamorphosis.....	125
6.4 Universal Mechanisms of Attachment.....	129
6.5 Growth and Colonization of the Hard Surface .....	133

## **Chapter 7**

Fundamentals of the Quantitative Theory of Colonization .....	143
7.1 Mathematical Models of Accumulation .....	143
7.2 Mathematical Models of Feeding and Growth.....	152
7.3 Gradient Distribution of Foulers over Surfaces in a Flow.....	156

## **Chapter 8**

General Regularities of Biofouling .....	169
8.1 Causes, Mechanisms, and Limits of Biofouling Concentration on Hard Surfaces.....	169
8.2 Evolution of Hard-Substrate Communities .....	175

## **Chapter 9**

Protection of Man-Made Structures against Biofouling.....	179
9.1 Physical Protection.....	179
9.2 Commercial Chemobiocidal Protection.....	182
9.3 Ecological Consequences of Toxicant Application .....	189

## **Chapter 10**

Ecologically Safe Protection from Biofouling.....	195
10.1 Defense against Epibionts.....	195
10.2 Natural and Industrial Anticolonization Protection.....	204
10.3 Repellent Protection .....	207
10.4 Antiadhesive Protection .....	212
10.5 Biocidal Protection.....	215
10.6 Prospects of Developing Ecologically Safe Anticolonization Protection .....	221

## **Chapter 11**

The General Model of Protection against Biofouling .....	227
--	-----

## **Chapter 12**

Conclusion .....	231
------------------	-----
