Alan A. Powell · Christopher W. Murphy

Inside a Modern Macroeconometric Model

A Guide to the Murphy Model

Second, Revised and Enlarged Edition

With a contribution by Nicholas Conron

With 107 Figures and 90 Tables

Springer
CONTENTS

Model-Builder's Preface vii
Model-Watcher's Preface ix

Part 1 — Setting the Scene

Chapter 1 HOW TO USE THIS BOOK 1

Chapter 2 DISTINGUISHING FEATURES OF MM 5

2.1 Overview of MM's relationship to other macro models 5
(a) Size 5
(b) Eclecticism 5
(c) Relationship to macro and micro paradigms 6
(d) Long-run properties 9
(e) Specification testing 9

2.2 Main economic features 9
(a) Dornbusch Model attributes 10
(b) Long-run optimizing behaviour in production 11
(c) Feedback effects from assets 13

Chapter 3 PRINCIPAL MECHANISMS IN MM 15

3.1 Introduction 15

3.2 The Mundell-Fleming model 15
(a) The MF model's equations 15
(b) Monetary and fiscal policy under flexible exchange rates in the MF model 19

3.3 Dornbusch's 1976 model 21
(a) Basic assumptions 22
(b) Underlying structural model 23
(c) Partially reduced form 26
(d) More on the underlying structural model — portfolio balance 30
(e) Equilibrium exchange rate 32
(f) Model consistent expectations 36
(g) The effects of a monetary expansion under rational expectations 38

3.4 Insights from 1980s developments in open-economy macroeconomics 46

3.5 Synopsis of illustrative simulations with MM 48
(a) Monetary expansion 48
(b) The NAIRU and the neoclassical long run 51
(c) Fiscal policy and public debt feedback 53
(d) Private consumption and foreign debt feedback 55
(e) Non-Ricardian equivalence 56
CHAPTER 3 (continued)

3.6 A highly stylized miniature model of balanced growth (HSM) 58
   (a) Main assumptions underlying HSM 58
   (b) Production function and resource endowment 63
   (c) Capital accumulation and the rate of return; domestic inflation and exchange rate determination 63
   (d) Growth in capital stock, workforce, output and real wages 65
   (e) Intertemporal budget constraint 67
   (f) Balance of trade 70
   (g) Qualitative behaviour of HSM under parameter shifts 71
   (h) Growth rates of prices and of nominal and real magnitudes in HSM and in MM 75

3.7 Conclusions from this chapter 77

Part 2 — Structural Form of MM

Chapter 4 OVERVIEW OF PART TWO
4.1 Introduction 79
4.2 Notation 81
4.3 Nomenclature for equations 81
4.4 Estimation methods, specification searches and hypothesis testing 82
   (a) General considerations 82
   (b) Data sources 83
   (c) Computing 83
   (d) Estimation methods 84
   (e) Obtaining a preferred equation 84
   (f) Diagnostic testing 84
4.5 Equation count and standard closure for simulations 86
4.6 Brief account of solution method 88

Chapter 5 WAGE BEHAVIOUR
5.1 Introduction 93
5.2 Technological change — basic ideas 93
   (a) Numerical example 95
   (b) Factor-augmenting technical change 96
   (c) Efficiency units 96
5.3 The role of Harrod-neutral technical progress in MM 97
5.4 Notation — Variables in wage equation S03 104
5.5 Inflationary expectations augmented Phillips Curve — Steady state 106
5.6 Estimated coefficients 107

Chapter 6 LABOUR FORCE PARTICIPATION
6.1 Introduction 109
6.2 Notation 109
6.3 Finding the underlying trend in the potential size of the workforce 109
6.4 Labour supply equation S02 110
6.5 Estimated coefficients 112
6.6 Steady state 112
6.7 Encouraged/discouraged worker effect 113
## Chapter 7  PRIVATE CONSUMPTION BEHAVIOUR

7.1 Introduction and notation  
7.2 Equilibrium consumption — equations S04A  
7.3 Dynamic disequilibrium consumption equation S04  
7.4 Steady state  
7.5 Parameter Estimates  

## Chapter 8  BEHAVIOUR OF THE RENTAL PRICE OF HOUSING

8.1 Introduction and notation  
8.2 Allocation of consumption into housing rental services and other  
8.3 Dwelling rental price dynamics — within sample — equation S01  
8.4 Steady state  
8.5 Dwelling rental price dynamics — forecast period  
8.6 Estimated coefficients  
8.7 Behavioural identity IO3, consumption price index, and identity IO1, definition of real consumption  

## Chapter 9  PRODUCTION OF HOUSING RENTAL SERVICES AND INVESTMENT IN DWELLINGS

9.1 Introduction  
9.2 Notation — Levels variables  
9.3 Notation — Depreciation, interest, growth and inflation rates  
9.4 Notation — Coefficients  
9.5 Production of housing rental services — identity IO4  
9.6 The natural real growth rate — identities I71 and I72  
9.7 Dwelling Investment — equation S05  
9.8 Estimated coefficients  
9.9 Some weaknesses of the approach  

## Chapter 10  THE ENTERPRISE PRODUCTION BLOCK OF THE BUSINESS SECTOR

10.1 Introduction  
10.2 An overview of the production structure of the enterprise economy  
10.3 Preliminaries on the CES/CET production technology  
10.4 Lengths of run in MM and in the enterprise production block  
(a) Introduction  
(b) Concepts of length of run  
— Short (or Keynesian) run of MM as a whole  
— Medium (or classical) run of MM as a whole  
— Long (or neoclassical) run of MM as a whole  
(c) The medium run of the enterprise production block  
(d) Parameter estimation of the medium-run neo-classical sub-model  
(e) The long run of the enterprise production block  
(f) Role of the medium- and long-run closures of the enterprise production block in generating the long run of MM as a whole
Chapter 11: Business Fixed Investment

11.1 Introduction and notation
11.2 Expected present value of the net revenue stream
11.3 Tobin’s (average) q ratio
11.4 Stochastic dynamic investment equation S13
   — Steady state
11.5 Estimated coefficients

Chapter 12: Business Sector Employment

12.1 Introduction and notation
12.2 Business sector employment equation S10
12.3 Steady state
12.4 Estimates

Chapter 13: Import Supply and Demand

13.1 Introduction and notation
13.2 Import supply under the small country assumption
13.3 Import demand — introduction and notation
13.4 Equilibrium import demand equation
13.5 Dynamic demand equation for imports S09
   — Steady state
13.6 Estimates
13.7 Trade-weighted exchange rate index

Chapter 14: Aggregate Export Supply

14.1 Introduction, notation and specification
   — Steady state
14.2 Estimates

Chapter 15: Disaggregation of Export Supply

15.1 Introduction; notation and specification for export compositional equation S06; its steady state
15.2 Estimates
15.3 Supply of ‘other’ exports
15.4 Supply of ‘commodity’ exports
15.5 Price index for aggregate exports

Chapter 16: Overseas Demand for ‘Commodity’ Exports

16.1 Introduction and notation
16.2 Form of the demand equation
16.3 Steady state
16.4 Estimates

Chapter 17: Inventory Investment in ‘Commodity’ Exports

17.1 Introduction and generic notation; form of the inventory equations
17.2 Inventory investment in ‘commodity’ exports
   (a) Notation for stochastic inventory equation S07
       and accumulation identity I07
   (b) Export ‘commodity’ inventory investment equation S07
   (c) Estimates
   (d) Steady state

Chapter 18: Demand for Non-‘Commodity’ Exports

18.1 Introduction and notation
18.2 Form of the demand and flexibility equations
18.3 Estimates
18.4 Steady state
Chapter 19 DOMESTIC GOOD INVENTORY INVESTMENT
19.1 Introduction and notation
19.2 Desired stock of non-farm inventories
19.3 Partial adjustment equation
19.4 Estimated coefficients
19.5 Steady state

Chapter 20 PRICE DYNAMICS FOR THE DOMESTIC GOOD
20.1 Introduction, notation and specification
20.2 Estimated coefficients

Chapter 21 SALES OF THE DOMESTIC GOOD; MISCELLANEOUS IDENTITIES FOR INVESTMENT AND CAPITAL
21.1 Introduction and notation for identities 108, 109, 113 and 144
21.2 Demand for, and sales of, the domestic good, and miscellaneous identities
   (a) Demand determination of output of the domestic good in the very short run
   (b) Public-private split of business fixed investment

Chapter 22 THE GOVERNMENT SECTOR
22.1 Introduction
22.2 General government sector spending
22.3 The public sector deficit — identities 135–138 and 145–149
22.4 Public sector portfolio allocation
22.5 Target public debt to GDP ratio and the tax reaction function
   (a) The tax reaction function 148
   (b) Steady state
   (c) Calibration

Chapter 23 FINANCIAL MARKETS
23.1 Introduction
23.2 Formation of interest rates — identities 131–133, 115–117, 126
   (a) Notation for interest rate formation and uncovered interest parity
   (b) Expectations theory of the term structure of interest rates
   (c) Inflation and inflationary expectations
   (d) Real 10-year bond rate
   (e) Long-run actual rate of return on business fixed capital
   (f) Definitions of foreign short- and long-term interest rates
23.3 Uncovered interest parity — identity 127
23.4 Two key exchange rates
23.5 Money demand — equation S16
   (a) Specification and notation
   (b) Estimates
23.6 Balance of payments identity 151

Chapter 24 NATIONAL-ACCOUNTING, STOCK-FLOW AND MISCELLANEOUS IDENTITIES
24.1 Introduction
24.2 National-accounting identities
24.3 Stock-flow identities
24.4 Lead-lag identities
24.5 Three definitional identities

APPENDICES TO PART 2
2.1 List of variables in MM
2.2 List of coefficients and parameters in MM
2.3 Classification of MM equations
2.4 Consolidated equation list
2.5 Concordance between original MM notation for variables and notation used in Part 2
Part 3 — Simulations with MM

Chapter 25  INTRODUCTION TO THE SIMULATIONS

25.1 Preamble 303
25.2 Use of miniature models in Part 3 303
25.3 Guide to Chapters 26 and 27 305

Chapter 26  MONETARY SHOCKS

26.1 Introduction and notation 307
26.2 Features shared with the Dombusch model 309
26.3 Overshooting and undershooting exchange rates revisited 311
   (a) Inevitability of overshooting in DBM 311
   (b) Possible sources of different exchange rate behaviour in
       DBM and MM 312
   (c) Rigorous definition of undershooting and overshooting
       exchange rates 314
   (d) Reporting simulation results for the exchange rate as deviations
       314
   (e) MM's undershooting exchange rate 315
26.4 An extended Dombusch model with inertia 317
   (a) Inertia in the IS curve 317
   (b) Solution sequence for the extended DBM 318
   (c) Form of the lag distribution for aggregate demand in the
       extended DBM 319
   (d) Factors responsible for inertia in aggregate demand in MM 321
   (e) Solutions of the extended DBM 321
26.5 Detailed analysis of MM responses to a monetary shock 326
   (a) Effects on the interest rate via the demand for money curve
       326
   (b) Strategy for explaining the path of the exchange rate after
       the initial devaluation 328
   (c) Simplified price system for MM 328
   (d) Calibrating the simplified price system 332
   (e) Explaining short-term interest rate movements 333
   (f) Responses of dwelling investment and consumption 334
   (g) Responses of business fixed investment 338
26.6 D4M — a descriptive miniature Murphy Model for the
      analysis of a monetary shock 339
   (a) GNE, the price of the domestic good, and the
       interest and exchange rates 339
   (b) Calibrating D4M to MM 341
   (c) Completing the miniature model: the trade account and GDP
       345
   (d) Extending the coverage of D4M: investment, imports and
       employment 346
26.7 Summary 348

Chapter 27  A FISCAL SHOCK

27.1 The nature of the shock and general introduction 351
27.2 Strategy for constructing a shock-specific miniature 353
27.3 Identifying important initial consequences of the fiscal shock 355
   (a) The initial jump in GNE 355
      — The jump in consumption 356
      — Contribution to GNE of increased general government
         employment via labour market and wealth effects in
         MM's consumption function 357
      — Direct contributions to GNE of government spending 358
   (b) Price behaviour in quarters 1 and 2 following the shock 358
      — Regaining our bearings, I 363
27.4 Terminal conditions, I: Insights from HSM 364
27.5 Terminal conditions, II: S3MM—A stylized steady-state Murphy Model
(a) Introduction to S3MM 366
(b) Sustainability of foreign debt 372
(c) Effects of fiscal expansion in S3MM 375
  — Macro comparisons with MM 377
  — Increased public consumption 379
  — Increased public employment 383
  — Regaining our bearings, II 384

27.6 F3M—A fiscal miniature Murphy Model 385
(a) Steady-state values for nominal GNE, the price of the domestic good, and the nominal exchange rate 386
(b) Calibration of F3M 387

27.7 MM's dynamic response 387
(a) Wealth, foreign debt, labour income and consumption 388
  — Portfolio changes 390
(b) The real exchange rate and the trade account 391
(c) Investment and GDP 392
(d) Employment 394

27.8 Summary 396

APPENDICES TO PART 3
3.1 Parameter file for MM used in Part 3 397
3.2 Excel spreadsheet used to solve the Extended Dornbusch Model 399
3.3 Values of variables for calculating ratios in MM's steady state 401

Part 4 — New Horizons

Chapter 28 MM2—A FULLY INTEGRATED MACRO-CGE MODEL
28.1 Introduction 403
28.2 Structure of MM2 403
(a) Aggregate level 406
(b) Industry level 410
(c) Commodity group level 413
(d) MM2-Demographic and MM2-States 414
(e) Econometric aspects 414
28.3 A monetary contraction—scenario and monetary policy equation 414
28.4 Macro effects of a monetary contraction 416
28.5 Industry effects of a monetary contraction 420
(a) Production 420
(b) Business investment 422
(c) Adjustment in the manufacturing sector 424
28.6 State effects of a monetary contraction 426
28.7 Summary of the simulations and concluding policy perspective 428
28.8 Commercial availability of MM2 software 430
