

Marschner's Mineral Nutrition of Higher Plants

Third Edition

Petra Marschner
School of Agriculture, Food and Wine
The University of Adelaide
Australia

AMSTERDAM • BOSTON • HEIDELBERG • LONDON • NEW YORK • OXFORD • PARIS
SAN DIEGO • SAN FRANCISCO • SINGAPORE • SYDNEY • TOKYO

Academic Press is an imprint of Elsevier

Foreword	v		
Preface to First Edition	vii		
Preface to Second Edition	ix		
Contributing Authors	xi		
Part I			
Nutritional Physiology			
1. Introduction, Definition and Classification of Nutrients			
<i>Ernest Kirkby</i>			
1.1 General	3		
1.2 Essential Elements for Plant Growth	3		
1.3 Biochemical Behaviour and Physiological Functions of Elements in Plants	4		
2. Ion Uptake Mechanisms of Individual Cells and Roots: Short-distance Transport			
<i>Philip White</i>			
2.1 General	7		
2.2 Pathway of Solutes from the External Solution into Root Cells	8		
2.3 Composition of Biological Membranes	10		
2.4 Solute Transport Across Membranes	13		
2.5 Factors Affecting Ion Uptake by Roots	21		
2.6 Uptake of Ions and Water along the Root Axis	39		
2.7 Radial Transport of Ions and Water Across the Root	41		
2.8 Release of Ions into the Xylem	43		
2.9 Factors Affecting Ion Release into the Xylem and Exudation Rate	44		
3. Long-distance Transport in the Xylem and Phloem			
<i>Philip White</i>			
3.1 General	49		
3.2 Xylem Transport	50		
3.3 Phloem Transport	58		
		3.4 Relative Importance of Phloem and Xylem for Long-distance Transport of Nutrients	62
		3.5 Remobilization of Nutrients	66
		4. Uptake and Release of Elements by Leaves and Other Aerial Plant Parts	
		<i>Thomas Eichert and Victoria Fernández</i>	
		4.1 General	71
		4.2 Uptake and Release of Gases and Other Volatile Compounds Through Stomata	71
		4.3 Uptake of Solutes	74
		4.4 Foliar Application of Nutrients	78
		4.5 Leaching of Elements from Leaves	82
		4.6 Ecological Importance of Uptake and Leaching of Solutes from Leaves	83
		5. Mineral Nutrition, Yield and Source–Sink Relationships	
		<i>Christof Engels, Ernest Kirkby and Philip White</i>	
		5.1 General	85
		5.2 Relationships between Nutrient Supply and Yield	86
		5.3 Photosynthetic Activity and Related Processes	87
		5.4 Photosynthetic Area	102
		5.5 Respiration and Oxidative Phosphorylation	105
		5.6 Phloem Transport of Assimilates and its Regulation	107
		5.7 Sink Formation	113
		5.8 Sink Activity	117
		5.9 Role of Phytohormones in the Regulation of the Sink–Source Relationships	120
		5.10 Source and Sink Limitations on Yield	131
		6. Functions of Macronutrients	
		<i>Malcolm Hawkesford, Walter Horst, Thomas Kichey, Hans Lambers, Jan Schjoerring, Inge Skrumager Møller, Philip White</i>	
		6.1 Nitrogen	135
		6.2 Sulphur	151

6.3 Phosphorus	158		
6.4 Magnesium	165		
6.5 Calcium	171		
6.6 Potassium	178		
7. Function of Nutrients: Micronutrients			
<i>Martin Broadley, Patrick Brown, Ismail Cakmak, Zed Rengel and Fangjie Zhao</i>			
7.1 Iron	191		
7.2 Manganese	200		
7.3 Copper	206		
7.4 Zinc	212		
7.5 Nickel	223		
7.6 Molybdenum	226		
7.7 Boron	233		
7.8 Chlorine	243		
8. Beneficial Elements			
<i>Martin Broadley, Patrick Brown, Ismail Cakmak, Jian Feng Ma, Zed Rengel and Fangjie Zhao</i>			
8.1 Definition	249		
8.2 Sodium	249		
8.3 Silicon	257		
8.4 Cobalt	261		
8.5 Selenium	263		
8.6 Aluminium	268		
8.7 Other Elements	268		
9. Nutrition and Quality			
<i>Franz Wiesler</i>			
9.1 Introduction	271		
9.2 Nutrition and Appearance	272		
9.3 Nutrition and Chemical Composition	273		
10. Relationship between Nutrition, Plant Diseases and Pests			
<i>Don Huber, Volker Römheld and Markus Weinmann</i>			
10.1 General	283		
10.2 Relationship between Susceptibility and Nutritional Status of Plants	284		
10.3 Fungal Diseases	285		
10.4 Bacterial and Viral Diseases	291		
10.5 Soil-borne Fungal and Bacterial Diseases	293		
10.6 Pests	295		
10.7 Direct and Indirect Effects of Fertilizer Application on the Performance of Plants and Their Parasites	297		
11. Diagnosis of Deficiency and Toxicity of Nutrients			
<i>Volker Römheld</i>			
11.1 General	299		
11.2 Nutrient Supply and Growth Response	299		
11.3 Diagnosis of Nutritional Disorders by Visible Symptoms	300		
11.4 Plant Analysis	301		
11.5 Histochemical and Biochemical Methods	310		
11.6 Plant Analysis versus Soil Analysis	311		
Part II			
Plant–Soil Relationships			
12. Nutrient Availability in Soils			
<i>Petra Marschner and Zed Rengel</i>			
12.1 General	315		
12.2 Chemical Soil Analysis	315		
12.3 Movement of Nutrients to the Root Surface	316		
12.4 Role of Root Density	324		
12.5 Nutrient Availability and Distribution of Water in Soils	325		
12.6 Role of Soil Structure	326		
12.7 Intensity/Quantity Ratio, Plant Factors and Consequences for Soil Testing	328		
13. Effect of Internal and External Factors on Root Growth and Development			
<i>Jonathan Lynch, Petra Marschner and Zed Rengel</i>			
13.1 General	331		
13.2 Carbohydrate Supply	331		
13.3 Root Development	332		
13.4 Soil Chemical Factors	334		
13.5 Soil Organisms	340		
13.6 Soil Physical Factors	342		
13.7 Shoot/Root Ratio	345		
14. Rhizosphere Chemistry in Relation to Plant Nutrition			
<i>Günter Neumann, Volker Römheld</i>			
14.1 General	347		
14.2 Spatial Extent of the Rhizosphere	349		
14.3 Inorganic Elements in the Rhizosphere	350		
14.4 Rhizosphere pH	353		
14.5 Redox Potential and Reducing Processes	359		
14.6 Rhizodeposition and Root Exudates	360		

15. Rhizosphere Biology

Petra Marschner

- 15.1 General 369
- 15.2 Rhizosphere Microorganisms 369
- 15.3 Mycorrhiza 373

16. Nitrogen Fixation

Jim Cooper and Heinrich Scherer

- 16.1 General 389
- 16.2 Biological Nitrogen-fixing Systems 389
- 16.3 Biochemistry of Nitrogen Fixation 390
- 16.4 Symbiotic Systems 392
- 16.5 Amounts of N Fixed by Legumes, and its Transfer to Other Plants in Mixed Stands 405
- 16.6 Significance of Free-living and Associative Nitrogen Fixation 407
- 16.7 Outlook 408

17. Adaptation of Plants to Adverse Chemical Soil Conditions

Eckhard George, Walter Horst and Elke Neumann

- 17.1 Natural Vegetation 409
- 17.2 High-input versus Low-input Approach 410

- 17.3 Acid Mineral Soils 417
- 17.4 Waterlogged and Flooded Soils 430
- 17.5 Calcareous and Alkaline Soils 444
- 17.6 Saline Soils 455

18. Nutrient and Carbon Fluxes in Terrestrial Agro-Ecosystems

Andreas Buerkert, Rainer Joergensen, Bernard Ludwig and Eva Schlecht

- 18.1 Microbiological Factors Determining Carbon and Nitrogen Emissions 473
- 18.2 Effects of Organic Soil Amendments on Emissions 475
- 18.3 Effects of pH, Soil Water Content and Temperature on Matter Turnover 475
- 18.4 Global Warming Effects 476
- 18.5 Plant–animal Interactions Affecting Nutrient Fluxes at Different Scales 476
- 18.6 Modelling Approaches in Matter Fluxes 482
