Rent, Resources, Technologies

With 39 Figures
and 15 Tables

Springer

Contents

Chapter I – Historical and theoretical introduction to rent, resources, and technologies

I.1. Introduction	1
I.2. Historical and empirical stylized facts	2
I.3. Classical dynamics, scarcity, and surplus rent	7
I.4. General static scarcity and marginal rent	12
I.5. Dynamic and static scarcity, surplus and marginal rent: comparisons and developments	14
I.6. Specific natural scarcities	16
I.7. Growth without natural scarcities	18
I.8. Complex development and relative scarcities	22
I.9. Relative and absolute scarcities	26
I.10. Scarce resources and structural rent in static conditions	28
I.11. Resources, complex and dynamic scarcities, technological rent	31
I.12. Conclusions and further lines of analysis	33

Chapter II – Production and distribution: data, hypothesis and problems

II.1. Introduction	37
II.2. Basic products and primary commodities (PCC1)	37
II.3. Non-produced means of production (NPMP) and the processes directly using them	37
II.4. Commodities and processes not directly using NPMP	38
II.5. Technical coefficients and shares of necessary consumption	38
II.6. Production techniques	39
II.7. The viability of the techniques	39
II.8. Scale constraints of the techniques and technological scarcity	39
II.9. Production technologies	39
II.10. Dimension of the economic system	40
II.11. Some problems: new interdependence between production and distribution	40
II.12. The order of efficiency (OE)	41
II.13. The levels of activity of the economic system	41
II.14. The technology of the economic system	41
II.15. The order of rentability	41
II.16. Induced changes in the distribution of income	42
II.17. Autonomous changes in the distribution of income	42
II.18. Static analysis and dynamic analysis	42

II.19. Conclusions	42
Chapter III – Order of efficiency	
III.1. Introduction	43
III.2. The general system price-distribution	43
III.3. The sub-system prices-wage-profit	44
III.4. The rent sub-system and types of rent	45
III.5. The central role of NPMP	46
III.6. Static price-distribution order of efficiency	46
III.7. The order of efficiency with zero wage and maximum rate of profit	47
III.8. The order of efficiency with zero profit and maximum unit wage	48
III.9. The order of efficiency with unit wage and rate of profit different from zero	49
III.10. The order of physical efficiency	49
III.11. Comparison among orders of efficiency	50
Chapter IV – Production with global technologies in static settings	
IV.1. Introduction	51
IV.2. The physical system with one technique	51
IV.3. Global technologies and splitting coefficients	52
IV.4. The physical system with two techniques	54
IV.5. The physical economic system with k techniques	55
IV.6. Technology and the aggregate economic system	57
IV.7. Technology and the disaggregate economic system	59
IV.8. Changes in efficiency, in activity and efficiency proxies: some premises	59
IV.9. Changes in efficiency and price efficiency	60
IV.10. Growth of the production activity	63
IV.11. Conclusions and further lines of analysis	64
Chapter V – Rent, distribution, prices	
V.1. Introduction	67
V.2. The solving sub-system $p\omega\pi$ and the general system price-distribution	67
V.3. Total distributive variables and value of the net product	68
V.4. The order of rentability and its induced changes	69
V.5. A simple case with one primary commodity and one final commodity	70
V.6. Induced changes of wages and profits	72
V.7. Autonomous changes in distribution: general propositions	74
V.8. Autonomous changes with a stable solving sub-system and the effects on rents	76
V.9. Autonomous changes with a stable solving sub-system and discontinuous rent	77
V.10. Autonomous changes with variable rents	79
V.11. Autonomous changes in the solving sub-system with permanent rent	79
V.12. Reduction in the technology dimension and effects	

on the distributive variables	80
V.13. Conclusions	80

Chapter VI – Non-equiproportional dynamics with compound technologies: productions

VI.1. Introduction	81
VI.2. Towards dynamic systems: accumulation and residuals	81
VI.3. Introduction to compound technologies	82
VI.4. Equiproportional maximum growth with only one sub-system	83
VI.5. Non-equiproportional growth with two techniques: compound technology and residuals	85
VI.6. The residuals and their possible utilization	88
VI.7. The total variables of the compound technology	88
VI.8. The rates of growth of productions	89
VI.9. The rates of growth of net products	92
VI.10. Comparisons between growth rates of productions and net products	93
VI.11. The rates of net product	93
VI.12. Equiproportional growth with two techniques	94
VI.13. Summary of the essential features	95
VI.14. The relation between technological change and technological dimension	96

Chapter VII – Choice of technologies and dynamic-physical order of efficiency

VII.1. Introduction	97
VII.2. Choice of techniques: previous hypotheses and their re-examination	97
VII.3. New efficiency orders, choice of techniques and of technologies	98
VII.4. Dynamic-physical OE among technologies relative to the same NPMP and the same time horizon	99
VII.5. Techniques with equal NPMP and s , and orderable residuals	99
VII.6. Techniques with equal NPMP and s , one of which without residuals	103
VII.7. Techniques with equal NPMP and s , and with non orderable residuals	107
VII.8. Techniques with equal NPMP and s , but with several commodities without residuals	110
VII.9. Techniques with equal NPMP and different s	113
VII.10. Dynamic efficiency: orderable and non-orderable cases	115
VII.11. Orderable and non-orderable cases: a numerical example	116
VII.12. Conclusions	124

Chapter VIII – Choice of technologies and dynamic values efficiency order

VIII.1. Introduction	127
VIII.2. Discount rate and prices	128
VIII.3. The dynamic values OE and the inter-temporal average rate of value added: a simplified case	129
VIII.4. The determination of the inter-temporal average	

rate of value added: an example	130
VIII.5. The impossibility of having a technology of type $[A(1); A(2j); A(2i)]$	137
VIII.6. The dynamic OE among technologies composed of techniques with the same and different NPMP	138
VIII.7. Conclusions	139

Chapter IX – Choice of technologies and dynamic price-distribution order of efficiency

IX.1. Introduction	141
IX.2. The dynamic price-distribution OE	142
IX.3. The dynamic price-distribution OE among techniques with the same NPMP	143
IX.4. The static and dynamic price-distribution OE	150
IX.5. Endowment of NPMP, growth time-horizon and consequences on the price-distribution OE	150
IX.6. Partial accumulation and its consequences on the dynamic price-distribution OE	155
IX.7. The relation between the dynamic values OE and the dynamic price-distribution OE	158
IX.8. Some final remarks	158

Chapter X – The dynamics of income distribution: total wages and their shares

X.1. Introduction	161
X.2. Total distributive variables and net product value	161
X.3. An overview on distribution and prices	163
X.4. Wage dynamics	165
X.4.1 General propositions	166
X.4.2. The dynamics of the share of wages with one technique	167
X.4.3. The dynamics of the share of wages when technology changes dimension	167
X.4.3.1 The case of absence of residuals and equal labor coefficients	171
X.4.3.2 The case without residuals and increasing labor coefficients	172
X.4.3.3. The case with residuals	173
X.4.4. The dynamics of the share of wages when the activity level of the last technique increases	180
X.5. Conclusions	184

Chapter XI – Dynamics of profits, rents and their shares

XI.1. Introduction	187
XI.2. Profit dynamics: general propositions	187
XI.3. The profit rate	188
XI.4. Total profits	188

XI.4.1 Total profits with a single technique	188
XI.4.2 Total profits with two techniques	188
XI.4.3 Total profits with the increase of the activity level of the second technique	192
XI.4.4 Total profits with growth in the dimension of technology	192
XI.5. The share of profits on value added	193
XI.5.1 The dynamics of the share of profits with only one active technique	193
XI.5.2 The dynamics of the share of profits when technology changes dimension	193
XI.5.2.1 The case of accumulation without residuals	194
XI.5.2.2 The case with residuals	195
XI.5.3 The dynamics of the share of profits when the activity level of the last technique increases	196
XI.6. Rents dynamics	197
XI.6.1 Unit rent	197
XI.6.2 Total rents	197
XI.7. The share of rents on value added with technology composed by one and two techniques	200
XI.8. Antagonism between the different distributive shares	201
XI.9. The dynamics of the share of rents with technology composed by three techniques	201
XI.10. Conclusions	202
 Chapter XII – Technical progress and technological change	
XII.1. Introduction	207
XII.2. First distinction between technical and technological progress	207
XII.3. Cases of technical progress	209
XII.3.1. Structural technical progress: changes in the inter-industry coefficients	209
XII.3.2. Linear technical progress: changes in the labor coefficients	210
XII.3.3. Natural technical progress: changes in the coefficients and in the quantities of NPMP	211
XII.4. Potential and actual, absolute and relative technical progress	211
XII.5. Relationships between technical and technological progress	212
XII.6. Natural and linear technical progress, and technological progress	213
XII.7. Structural technical progress with and without technological progress	214
XII.8. A proxy for assessing the interrelationship between technical and technological progress	217
XII.9. Technological progress without technical progress	217
XII.10. Conclusions	219

Chapter XIII – Technical and technological progress, rent, and income distribution	
XIII.1. Introduction	221
XIII.2. Technological progress and income distribution	221
XIII.3. Types of technical progress and consequences on the price-distribution system	222
XIII.4. Technical, technological progress and operators' behavior	223
XIII.5. Profit rate and quasi-rent in the case of one active technique and structural technical progress	224
XIII.6. Rent in the case of many active techniques and linear and structural technical progress in the process with NPMP	225
XIII.7. Rent in the case of many active techniques and natural technical progress	227
XIII.8. Technical progress in all processes of a technique	229
XIII.9. Rent from technological scarcity and technological progress: a simplified case	229
XIII.10. Rent from technological scarcity and technological progress: the general case	230
XIII.11. Conclusions	231
Chapter XIV – Conclusions and further lines of research	
XIV.1. Synthesis of results	233
XIV.2. Ongoing extensions: numeraire, re-integration, and the environment	236
XIV.2.1 Numeraire	237
XIV.2.2. Reintegration of natural resources	238
XIV.2.3. The environment	239
XIV.3. The range and complexity of a "complete" theory of economic dynamics	240
Appendix A – Techniques and technologies analyzed in the numerical examples (Chapters VII, VIII, IX, X, XI)	245
List of notations	249
