Contents

Preface xi
Contributors xiii
Introduction (*M. E. Schumacher and J. H. Steele*) 1

PART I. ANALYSIS AND METHODOLOGY 3

1. **Can Ecological Concepts Span the Land and Ocean Domains?**
(*J. H. Steele*) 5
Physical Scales 7
Biological Scales 8
Comparing Responses 12
Discussion 13
Acknowledgments 16
References 16

2. **Fitting Population Models to Time Series Data** (*A. R. Solow*) 20
The Basic Model 21
Estimating α Under Three Error Models 21
What Is an Ecologist to Do? 25
Acknowledgments 26
References 26

3. **Estimate of Interhemispheric Ocean Carbon Transport Based on ΣCO_2 and Nutrient Distribution** (*T.-H. Peng and W. S. Broecker*) 28
Methodology 30
Results and Discussion 31
Interhemispheric Transport Flux 42
Acknowledgments 46
References 46

4. **Integration of Spatial Analysis in Long-Term Ecological Studies**
(*J. R. Vande Castle*) 48
Spatial Organization of Remote Sensing Data 49
Temporal Organization of Time Series Data 50

Conclusion	52
References	53
5. Dynamical Systems Theory for Ecologists: A Brief Overview	
(<i>J. Guckenheimer</i>)	54
Phase Portraits	55
Bifurcations	58
Data Analysis	65
Conclusion	68
References	68
6. The Natural History of Time Series (<i>R. R. Dickson</i>)	70
Birth Rate, Mortality Rate, and Longevity	70
Growth and Maturity	72
Health and Disease	74
Extreme and Unacceptable Behavior	81
Heredity	86
Camouflage and Mimicry	89
The Individual and the Population	90
Evolution	92
Appendix I: Current Meter Malfunctions	94
References	96
7. Detecting Periodicity in Quantitative versus Semi-Quantitative Times Series	
(<i>J. D. Stockwell et al.</i>)	99
Methods	100
Traditional Time Series Analysis	100
The Contingency Periodogram	100
Analyses	103
Example 1: A Seasonal Model of Population Dynamics	103
Example 2: A "Super" Chaotic Model	105
Example 3: Application to Limnological Data	107
Example 4: Application to Marine Biology	111
Conclusion	113
Acknowledgments	114
References	115
PART II. COMPARISONS OF SCALES	117
8. Physical and Biological Scales of Variability in Lakes, Estuaries, and the Coastal Ocean (<i>T. M. Powell</i>)	119
Elementary Considerations	119
Physical-Biological Coupling	122
100-Meter-100-Kilometer Scales	124
Smaller (< 100 m) and Larger (> 100 km) Scales	130
Oceanic-Terrestrial Coupling	131
Terrestrial Systems and Trophic Levels: Conclusion	132
Acknowledgments	134
References	134

9. Year-to-Year Fluctuation of the Spring Phytoplankton Bloom in South San Francisco Bay: An Example of Ecological Variability at the Land-Sea Interface (<i>J. E. Cloern and A. D. Jassby</i>)	139
Description of the Dataset	139
Principal Component Analysis	141
Results of PCA	142
Interannual Variability of the Principal Components	145
Acknowledgments	148
References	148
10. Scales of Variability in a Stable Environment: Phytoplankton in the Central North Pacific (<i>E. L. Venrick</i>)	150
Methods	152
Chlorophyll	153
Floristics	154
Similarity	154
Results	154
The Central North Pacific Environment	154
The Vertical Structure of Phytoplankton Species	156
Interannual Changes	161
Large-Scale Spatial Changes	164
The Seasonal Cycle	167
Discussion	171
Acknowledgments	177
References	177
11. Ocean Time Series Research Near Bermuda: The Hydrostation S Time-Series and the Bermuda Atlantic Time-Series Study (BATS) Program (<i>A. F. Michaels</i>)	181
The Measurement Program	183
Data Quality and Continuity	186
Replication of 10–100% of the Samples in Each Cast	187
Reference to Absolute Standards	188
Standard and Sample Carry-Over Between Time Points	188
Internal Consistency Between Measurements	189
Overlap of New Sampling Methods and People Before Changeover	189
Routine Participation in Methods Intercomparisons with Other Labs	189
Ancillary Programs	191
Seasonal Patterns of Physics, Chemistry, and Biology at BATS and Hydrostation S	191
Measurement and Inference of Biogeochemical Rate Processes	196
Short-Term Variability in Phytoplankton Community Composition	198
Spatial Heterogeneity	202
The Design of an Ocean Time Series Sampling Program	203
Acknowledgments	205
References	205

12. Planning Long-Term Vegetation Studies at Landscape Scales	
(<i>T. J. Stohlgren</i>)	209
Ways to Assess Long-Term Vegetation Change	211
Constraints and Limitations of Long-Term Landscape-Scale Vegetation Studies	212
Selected Ongoing Long-Term Vegetation Studies	213
Forest "Reference Stands"	214
Measuring Biological Diversity at Permanent Plots	216
Landscape-Scale Vegetation Inventory and Monitoring Programs	217
GOSSIP: A Framework for the Design of Long-Term, Landscape-Scale Vegetation Studies	218
Goals	219
Objectives	220
Scale	222
Sampling Design	225
Intensity	226
Pattern	231
Quantifying Trends in Space and Time: Research Needs	233
Conclusion	234
Acknowledgments	235
References	235
13. Time Series Compared Across the Land-Sea Gradient	
(<i>S. C. Warner et al.</i>)	242
Selection of Datasets and Analyses	244
Comparisons	249
Scale	249
Density Dependence	254
Bulmer's Method	255
Nonlinearity	257
Variation	257
Periodicities	260
Overall Contributing Factors	261
Discussion	265
Acknowledgments	267
References	267
PART III. PROCESSES AND PRINCIPLES	275
14. The Problem of Pattern and Scale in Ecology (<i>S. A. Levin</i>)	277
Introduction	278
The Evolution of Life History Phenomena	280
Pattern Formation	286
Patterns of Spread	291
Pattern and Scale in Terrestrial Systems	294
Metapopulation Models	301
Food Webs	302

Global Climate Change and Ecological Models	303
Patterns of Evolution at the Community Level	305
Conclusion	307
Acknowledgments	311
References	312
15. Long-Term Environmental Change (P. F. McDowell, T. Webb III, and P. J. Bartlein)	327
The Importance of Long-Term Environmental Change to Understanding Human Transformation of the Earth	329
Climate: Scale, Control, and Response	331
Global Climatic Change at Different Time Scales	331
Controls of Climatic Variations	333
Climatic Variations During the Cenozoic: Geological Control	336
Climatic Variations During the Quarternary: The Astronomical Theory of Climatic Variations	336
Climatic Variations During the Past 20,000 Years: Control by Surface Boundary Conditions and Insolation	339
Climatic Variations on the Decadal to Millennial Time Scale: Sunspots, Volcanoes, Carbon Dioxide, and Autovariations	341
Vegetation: Scale, Control, and Response	342
Vegetational Change at Different Time and Space Scales	342
Controls of Vegetational Change	347
Landscape Change: Scale, Control, and Response	350
Dynamics and Inheritance in the Physical Landscape	350
Theories of Geomorphic Change	351
Physical Landscape Change at Different Time and Space Scales	353
Controls of Physical Landscape Change	355
Human Impacts in the Context of Long-Term Environmental Change	358
Conclusions	360
Acknowledgments	361
References	361
16. Monitoring Ocean Productivity by Assimilating Satellite Chlorophyll into Ecosystem Models (R. A. Armstrong, J. L. Sarmiento, and R. D. Slater)	371
Assimilating Satellite Data into Ecosystem Models	374
Experiments Using the Fasham Ecosystem Model	376
A Multiple-Chains Fasham Model	379
Productivities	382
Discussion	383
Acknowledgments	387
References	387
17. Long-Term Measurements at the Arctic LTER Site (J. E. Hobbie et al.)	391
Long-Term Datasets on Measurements of Natural Ecosystems	394
Detection of Climate Changes	394
Detection of Correlations—Climate and Plant Flowering	394

Detection of Plant Community Change	397
Detection of Correlations—Stream Flow and Fish Production	398
Long-Term Datasets on Measurements of Manipulated Ecosystems	400
Effects of Lake Predator Experiments	400
The Effect of Phosphorus Addition to a River	402
The Effect of Nutrient Additions to a Lake	403
Responses of Tussock Tundra to Changes in Light and Nutrients	405
Conclusions	408
Acknowledgments	408
References	409
18. Basic Models in Epidemiology (<i>F. Brauer and C. Castillo-Chavez</i>)	410
Alphabet Models	412
Transition Rates and Waiting Times	423
Models with Social Structure	428
Stochastic Models with Social Structure	435
Conclusions	439
Acknowledgments	440
References	440
19. The Invisible Present (<i>J. J. Magnuson</i>)	448
Revealing the Invisible Present	449
Long-Term Ecological Research	453
Long-Term Lags Between Cause and Effect	454
Processes Taking Time	454
Biological Relicts	455
Movement Across Landscapes	455
Rare Coincidence	456
Chains of Events	458
Conclusions	458
Epilogue	460
Acknowledgments	461
References	461
20. Interpreting Explanatory Processes for Time Series Patterns: Lessons from Three Time Series (<i>M. P. McClaran et al.</i>)	465
Canada Lynx	466
Dungeness Crab	469
Increasing Global Temperature	472
Summary	476
References	478
Index	483
