

Philosophy of Biology

Brian Garvey

ACUMEN

Contents

<i>Acknowledgements</i>	ix
<i>Introduction</i>	xi
1. The argument in Darwin's <i>Origin</i>	1
1.1 Earlier attempts	2
1.2 Variation and inheritance	5
1.3 The struggle for existence	8
1.4 Natural selection	10
2. The power of genes	16
2.1 Introducing the gene	17
2.2 Genes and how organisms are made	21
2.3 Genes as agents	23
3. Units of selection	29
3.1 Genes versus individual organisms	30
3.2 Individual organisms as units of selection	33
3.3 Groups of organisms, and the question of altruism	35
3.4 Memes	39
4. Panglossianism and its discontents	46
4.1 The uniqueness of natural selection	47
4.2 The accusation of "panglossianism"	51
4.3 So what is wrong with panglossianism?	53
4.4 A storm in a teacup?	59

5. The role of development	64
5.1 A nineteenth-century idea: recapitulation	64
5.2 New developments in developmental biology	67
5.3 Evo-devo	72
5.4 Developmental systems theory	78
6. Nature and nurture	89
6.1 Why does innateness seem to matter so much?	89
6.2 But what is innateness?	94
6.3 The ordinary-language concept	96
6.4 Canalization	99
6.5 Generative entrenchment	101
6.6 A deflationary approach	103
6.7 Conclusion	105
7. Function: “what it is for” versus “what it does”	108
7.1 What it is for	112
7.2 What it has been selected for	117
7.3 What it does	121
7.4 Conclusion	125
8. Biological categories	127
8.1 Introduction: natural kinds in general	127
8.2 Taxonomy	128
8.3 What are the natural kinds of biology?	131
9. Species and their special problems	143
9.1 The interbreeding criterion	144
9.2 Species as individuals	148
9.3 A pluralistic approach	152
10. Biology and philosophy of science	157
10.1 Lawlessness in biology	157
10.2 Does biology have real laws?	163
10.3 Comprehensiveness, unity and simplicity	167
10.4 Conclusion	173
11. Evolution and epistemology	176
11.1 Conjectures and refutations	177
11.2 The reliability of our sources	180
11.3 The limitations of our minds	185

12. Evolution and religion	189
12.1 Does the theory of evolution support atheism?	190
12.2 “God of the gaps” arguments	196
12.3 Evolution and explaining religion	200
13. Evolution and human nature	207
13.1 Sociobiology and its controversies	208
13.2 Evolutionary psychology’s grand synthesis	211
13.3 Conclusion	222
14. Biology and ethics	224
14.1 Fitness as a normative concept	224
14.2 The naturalistic fallacy	230
14.3 Ought implies can	236
14.4 Altruism	239
14.5 Intuitions again	247
