

**Mathematical
Utility Theory**

**Utility Functions, Models,
and Applications in the Social Sciences**

**Edited by
Gerhard Herden, Norbert Knoche,
Christian Seidl, Walter Trockel**

**Journal of Economics/
Zeitschrift für Nationalökonomie
Supplement 8**

SpringerWienNewYork

Contents

Foundations of Mathematical Utility Theory

Bridges, D. S.: Constructive Methods in Mathematical Economics	1
Droste, M.: Uniqueness of Semicontinuous Ordinal Utility Functions	23
Estévez, M., Hervés, C., Verdejo, A.: Numerical Representation of Countably Bounded Preferences	39

Topological and Algebraic Aspects of Mathematical Utility Theory

Candeal, J. C., De Miguel, J. R., Induráin, E.: Existence of Additive and Continuous Utility Functions on Ordered Semigroups	53
Estévez, M., Hervés, C., Verdejo, A.: Topologies on the Space of Economic Agents	69
Schofield, N.: The Heart and the Uncovered Set	79

Choice Models, Random Utility Models, and Decision Theory

Herden, G.: On an Arrow-Type Theorem in Ordinal Data Analysis	115
Knoche, N.: On Some Interrelations between Choice and Ranking Probabilities	149

Utility Models in the Social Sciences

Trockel, W.: Rationalizability of the Nash Bargaining Solution	159
Schmidt, U.: Moral Hazard and First-Order Risk Aversion ..	167
Luce, R. D.: Binary Gambles of a Gain and a Loss: an Understudied Domain	181
Seidl, C., Traub, S.: Biases in the Assessment of von Neumann–Morgenstern Utility Functions	203

**Chipman, J. S.: An Application of Integrability and
Duality Theory to the Classical Transfer Problem
in International Trade 241**
