Contents

INTRODUCTION TO THE SERIES	V	The phase of regeneration of the depression basin	23
DEDICATION	IX	Delimitation of contemporary tectonic provinces	24
EDITORIAL STAFF	XI	The Urumqi Mountain frontal depression–folding zone	24
LIST OF CONTRIBUTORS	XII	The Junggar gentle monoclinic zone	26
<i>Chapter 1.</i> — REMARKS ON THE CHINESE MESOZOIC–CENOZOIC SEDIMENTARY BASINS by X. Zhu		Fuhai Terrace	26
References	5	Ulungur Depression	27
		Sangeqian Uplift	27
		Manas Lake–desert area depression	27
		Chepaizi highland	27
		Mosuowan Uplift	27
		Changji Depression	28
		Qitai–Mulehe uplift and depression block area	28
		Structural evolution and distribution of hydrocarbons	28
		References	31
<i>Chapter 2.</i> — UNSTABLE CRATONIC AND PALEOZOIC BASINS OF CHINA by H. Chen and D. Qin		<i>Chapter 4.</i> — TECTONIC EVOLUTION OF THE TARIM BASIN by Z. Tian, G. Chai and Y. Kang	
Introduction	7	Introduction	33
The basement of Paleozoic basins and their principal characteristics	7	Phases of evolution	34
General setting	7	Geosynclinal evolution phase	34
Oldest basement rocks	7	The platform's evolutionary phase	34
Characteristics of the individual basements of the Paleozoic basins	8	The basin's evolutionary phase	36
Northeastern China	8	Evolution of the tectonic framework	37
North China	10	Basement structure and its characteristics	37
South China	10	Structure of the sedimentary cover and its development	39
South China Sea	11	Regional tectonic characteristics	40
Northwest China	11	Central Uplift	40
Prototypes and distribution of Paleozoic basins	11	North Depression	40
Genetic classification of basins	11	Tabei Uplift	40
The prototypes of Paleozoic basins	11	Baicheng Depression	41
North China	13	Southwest Depression	41
South China	15	Southeast Depression	41
Northwest China	15	Qiemō–Ruoqiang faulted uplift	41
Conclusions	16	Kuluketage faulted uplift	41
References	16	Kalpin faulted uplift	41
		Tiekelike faulted uplift	42
		Altunshan faulted uplift	42
		Petroleum prospect	42
		References	42
<i>Chapter 3.</i> — TECTONIC FEATURES OF THE JUNGGAR BASIN AND THEIR RELATIONSHIP WITH OIL AND GAS DISTRIBUTION by X. Peng and G. Zhang		<i>Chapter 5.</i> — MECHANISM OF FORMATION OF THE Q Aidam Basin and Its Control on Petroleum by S. Gu and H. Di	
Introduction	17	Introduction	45
Regional background, basement and the basin's general characteristics	17	The basement	45
Stages of the basin's formation and development	19	The Paleozoic evolution	47
Early stage of alternating horsts and grabens	19	Formation and evolution of the basin	48
Formation stage of a unified, large inland depression lake basin	22	The downfaulting stage	48

The subsidence stage	49	The formation and development of the Mesozoic ploycyclic inland basin	69
The stage of decline and depocenter shifting	49	The uplift and disintegration of the basin, and the developing stage of the Cenozoic graben system	69
Structural units and oil/gas distribution	50	Geothermal history and economic mineral deposits	72
The northern block-faulting oil-bearing zone	50	References	75
The western oil- and gas-bearing area (Mangya Depression)	50		
The eastern Quaternary gas-bearing area (Sanhu New Depression)	51	<i>Chapter 8. — SONGLIAO BASIN — AN INTRACRATONIC CONTINENTAL SEDIMENTARY BASIN OF COMBINATION TYPE</i>	
Other mineral resources	51	by L. Ma, J. Yang and Z. Ding	
References	51	Introduction	77
		The deep and shallow structures and stratigraphy of the basin	77
<i>Chapter 6. — TECTONIC CHARACTERISTICS AND HYDROCARBONS OF THE HEXI CORRIDOR</i>		The sedimentary characteristics	81
by W. Xu, Y. He and Y. Yan		The nature and evolution of the basin	82
Introduction	53	The features of the geothermal field and the generation of hydrocarbons	83
Regional stratigraphy and sedimentary environment	53	The type and distribution of oil and gas pools	85
The Carboniferous system	55	References	87
The Permian and Triassic systems	56		
The Jurassic system	56	<i>Chapter 9. — THE BOHAI BAY BASIN</i>	
The Cretaceous system	57	by J. Hu, S. Xu, X. Tong and H. Wu	
The Tertiary system	57	Introduction	89
Characteristics of the regional tectonics	57	Formation and evolution of the Bohai Bay Basin	90
Classification of tectonic units	57	Basement of the North China Platform	90
The fault depression belt on the margin of the Alashan Platform	57	Transitional development stage in the Middle–Upper Proterozoic (1.7–0.6 Ga ago)	90
The depression belt of the corridor	58	Stable development stage of the platform in the Paleozoic	91
The Qilianshan fold belt	59	Mesozoic and Cenozoic faulting development stage	91
Characteristics of faults	59	Sedimentary characteristics of the Tertiary in the Bohai Bay Basin	94
The boundary fault	59	Stratigraphy	95
The minor interior faults	59	Eocene Kongdian Formation	95
Stages of tectonic evolution	60	Oligocene Shahejie Formation	96
Basement formation stage	60	Dongying Formation	97
Foredeep stage	60	Miocene–Pliocene Guantao Formation and Minhuazhen Formation	97
Fault-depression stage	60	Basin characteristics of faulted-depression-type lake basin	97
Subsidence stage	61	Faulted depressions and corresponding lakes to the sea	97
Stage of basin decline	61	A high rate of deposition rendered the sediments extremely thick	97
Hydrocarbon accumulations and their relation to faults	61	A fluvial system played an important role in sedimentation	97
Faults control the distribution of oil-forming depressions	61	In each geological stage, the sedimentary characteristics were influenced by the paleoclimate	97
Faults provide shelters for oil/gas traps	61	Type of reservoir rock body and its distribution as controlled by faulted-depression structure	100
Reversed faults create favorable conditions for the transformation from organic matter to hydrocarbons	61	Diagenetic epigenesis and evolution of organic matter	100
References	62	Early diagenetic phase	101
		Middle diagenetic phase	101
<i>Chapter 7. — ORDOS BASIN — A TYPICAL EXAMPLE OF AN UNSTABLE CRATONIC INTERIOR SUPERIMPOSED BASIN</i>		Late diagenetic phase	103
by Z. Sun, Q. Xie and J. Yang		Petroleum geology and petroleum resources in the Bohai Bay Basin	103
Introduction	63	References	105
Regional setting	64		
Basement rock and its structure	64		
The development history of the cover sediments and the superimposed characteristics of the basin	64		
Aulacogen basin in the Middle–Late Proterozoic continental rift stage	65		
Early Paleozoic marine carbonate platform stage with a geosyncline–platform tectonic regime	65		
The Late Paleozoic (C ₂) to Early Mesozoic (T ₂) intermediate stage characterized by the change from marine facies to inland basinal facies	67		

Chapter 10. — THE NORTH JIANGSU–SOUTH YELLOW SEA BASIN
by Y. Zhang, Z. Wei, W. Xu, R. Tao and R. Chen

Introduction 107

The nature of the basement 107

Cratonic marginal subsidence during the Sinian–Early Paleozoic 108

Late Paleozoic–Early Mesozoic cratonic depression 110

Basement decoupling basin in the Jurassic–Cretaceous 111

Transformation from Tertiary downfault to downwarp 113

The prospects of oil and gas traps 122

References 123

Chapter 11. — THE GENERATION AND EVOLUTION OF THE HEHUAI BASIN
by J. Han, S. Zhu and S. Xu

Introduction 125

Geological setting before the generation of the Mesozoic basin 125

Generation and development of the Hehuai Basin in Mesozoic time 128

Main fault controlling the generation and development of the Hehuai Basin 128

Generation mechanism and principal characteristics of the Hehuai Basin 130

The Mesozoic basin 130

The Cenozoic basin 131

The principal difference between the Hehuai and Bohai Bay basins in their Cenozoic tectonic development 133

Oil and gas potential 134

Acknowledgements 135

References 135

Chapter 12. — THE CRETACEOUS–PALEOGENE SALT-BEARING BASINS IN EASTERN CHINA
by F. Chen, S. Dai and G. Pan

Introduction 137

The distribution of the Cretaceous–Paleogene salt-bearing basins in eastern China 137

Sequential distribution 137

Spatial distribution 137

Regional tectonic characteristics and evolution of the salt-bearing basins 138

Regional tectonic characteristics 138

Formation and evolution of faulted salt-bearing basins 139

Pattern of saline zonation 140

Actual case — The Jiangnan Basin 140

Basement and sedimentary cover 140

Basement 140

Sedimentary cover 142

Paleogeographical evolution and characteristics of the salt lakes in the basin 142

Paleogeographical evolution 142

The characteristics of the Eocene and Late Eocene salt basin 144

Tectonic characteristics 144

Regional tectonics 144

Salt-dome structures 144

The hydrocarbon and other mineral resources 145

Hydrocarbon resources 145

Halite and gypsum 146

Saline water 146

Glaserite 146

References 146

Chapter 13. — FORMATION AND DEVELOPMENT OF THE SICHUAN BASIN
by J. Wang, C. Bao, Z. Lou and Z. Guo

Introduction 147

Basement of the Sichuan basin 147

Geologic history of the formation of the basement of the Yangtze paleoplate 148

Discovery of the Archeozoic–Early Proterozoic rocks (2400–1700 Ma) 148

Characteristics of the Middle Proterozoic (1700–850 Ma) rock formation 148

Formation of the basement in the Late Proterozoic–Early Sinian 149

Tectonic evolution of the Yangtze paleoplate basement 149

Island-chain development stage 150

Stage of the island chain developing into an island arc 150

Stage of the mature island arc breaking up into two island arcs 150

Stage of accumulation in the interarc basin 151

Final formation stage of the basement of the Yangtze paleoplate 151

Tectonic disturbance and the development history of the basin 151

Main evolution process in the cratonic basin 151

Uplift and depression in the Early Paleozoic 151

The pull-apart movement pattern in the Late Paleozoic (it occurred in the Sichuan Basin only in the Permian) 152

Compression–shear tectonic patterns formed since the Mesozoic 152

Divisions of the tectonic units in the Sichuan Basin 155

Sedimentary system and paleogeographic evolution in the Sichuan Basin 155

Distribution of the Early Paleozoic sedimentary rocks 156

Distribution of the Devonian and Carboniferous sedimentary rocks 157

Distribution of the Permian to Middle Triassic deposits 157

Transitional sedimentary features in the Late Triassic 158

Sedimentary features of the continental basin 158

An outline of mineral resources and the conditions for oil and gas mineralization in the Sichuan Basin 159

An outline of the mineral resources in the Sichuan Basin 159

Occurrence features of oil and gas in the Sichuan Basin 160

Evolution of the basin 160

On the optimization of the condition for oil and gas mineralization 160

Relationship between the anticlinal and non-anticlinal traps and cratonic development 161

Characteristics of the reservoir mainly controlled by secondary rock-forming effects	161		
Oil and gas mineralization and preservation processes in the Sichuan Basin	161		
Mineralization process in the stable cratonic stage	161		
Indo-Sinian mineralization process in the unstable cratonic stage	162		
Mineralization process of the continental basin in the unstable cratonic stage	162		
References	162		
Chapter 14. — CHARACTERISTICS AND TECTONIC EVOLUTION OF THE EAST CHINA SEA			
by Z. Zhou, J. Zhao and P. Yin			
Introduction	165		
The basement and its basic tectonic characteristics	165		
The Cenozoic stratigraphy and paleogeography	167		
Upper Cretaceous	168		
The Paleocene Lingfeng Formation	168		
The Eocene Oujiang and Pinghu formations	168		
The Oligocene Huagang Formation	168		
The Lower Miocene Longjing Formation	168		
The Middle Miocene Yuquan Formation	168		
The Upper Miocene Liulang Formation	170		
The Pliocene Santan Formation	170		
The Quaternary Donghai Group	170		
The tectonic characteristics	173		
The evolutionary history	175		
Oil and gas prospects	179		
Acknowledgement	179		
References	179		
Chapter 15. — GEOLOGY, TECTONICS AND EVOLUTION OF THE PEARL RIVER MOUTH BASIN			
by Z. Guong, Q. Jin, Z. Qiu, S. Wang and J. Meng			
Introduction	181		
Regional geology and tectonics	181		
Crustal characteristics and basement architecture	181		
Characteristics and structural evolution of the basin	184		
Rifts-valley phase	185		
Faulted sagging phase	185		
Sagging phase	186		
Tectonics and structural division of the basin	186		
Depositional characteristics of the basin	187		
Depositional systems	187		
Fluvial and lacustrine depositional systems	187		
Semi-closed marine depositional system	190		
Open-sea depositional system	190		
Environments of deposition	190		
Shenhu and Wenchang formations	190		
Enping Formation	192		
Zhuhai Formation	192		
Zhujiang Formation	192		
Deltaic system and organic reef	193		
Deltaic system	193		
Organic reef	193		
Hydrocarbon resources and potential	194		
Source rocks	194		
Reservoirs and seals	195		
References	196		
Chapter 16. — PETROLEUM GEOLOGY OF CENOZOIC BASINS IN THE NORTHWESTERN CONTINENTAL SHELF, SOUTH CHINA SEA			
by Q. Zhang and C. Kou			
Introduction	197		
Tectonic setting and basement rocks	197		
Cenozoic stratigraphy	198		
Changliu Formation (Late Paleocene–Early Eocene)	198		
Liushagang Formation (Middle Eocene–Early Oligocene)	198		
Weizhou Formation (Middle–Late Oligocene)	199		
Xiayang Formation (Early Miocene)	199		
Jiaowei Formation (Middle Miocene)	199		
Dengloujiao Formation (Late Miocene)	200		
Wanglougang Formation (Pliocene)	200		
Quaternary — unnamed	200		
Basin framework	200		
Tectonic evolution	203		
Basin characteristics	204		
Conclusions	206		
Acknowledgements	206		
References	206		
Chapter 17. — ORIGIN OF SEDIMENTARY BASINS OF CHINA			
by K. J. Hsü			
Introduction	207		
Evolution of geological thoughts in China	207		
Polycyclic orogenic deformations	208		
Tectonic evolution of China	209		
Junggar, Tarim and Qaidam basins	211		
Statement of the problem	211		
Junggar Basin	215		
Tarim Basin	215		
Qaidam Basin	218		
Conclusions	218		
Ordos Basin	218		
Turpan, Jiuquan and other pull-apart basins of northwest China	219		
Turpan Basin	219		
Jiuquan Basin	220		
Zhaoshui and Minhe basins	220		
Hetau Basin	220		
Fenhe and Weihe basins	220		
Lunpola Basin	221		
Erlian and Hailar basins	221		
Songliao Basin	221		
Gulf of Bohai Basin	222		
Sichuan Basin	222		
Mesozoic and Cenozoic basins of south China	223		
Subei Basin	225		
Jiangnan and Dongting basins	226		
Chinese offshore basins	226
