

Knowledge Acquisition for Expert Systems

Anna Hart

McGraw-Hill Book Company

New York St. Louis San Francisco Montreal Toronto

Contents

Preface	9
Chapter 1: The nature of expertise	13
<i>Intelligence</i>	13
<i>Experts</i>	14
<i>Doctor</i>	15
<i>Car mechanic</i>	15
<i>Teacher</i>	15
<i>Solicitor</i>	15
<i>The role of experts</i>	16
<i>Summary</i>	18
Chapter 2: Programs as experts	19
<i>Definition of expert systems</i>	19
<i>Advantages of using expert systems</i>	20
<i>How are expert systems different?</i>	22
<i>History of expert systems development</i>	23
<i>Applications of expert systems and some examples</i>	24
<i>Problems of using expert systems</i>	25
<i>Why use expert systems?</i>	27
<i>Summary</i>	27
Chapter 3: Systems analysis — a comparison	29
<i>Overview of systems analysis</i>	29
<i>A case study — a horror story!</i>	31
<i>Expert system development</i>	32
<i>Knowledge elicitation — a more difficult problem</i>	35
<i>Summary</i>	37
Chapter 4: The knowledge engineer	39
<i>The role of the systems analyst</i>	39
<i>The role of the knowledge engineer</i>	40
<i>Project management</i>	42
<i>Project identification</i>	43
<i>Knowledge acquisition</i>	46
<i>Summary</i>	48

Chapter 5: Fact-finding by interviews	49
<i>General principles</i> 49	
<i>Objectives</i> 52	
<i>Feedback</i> 56	
<i>Intermediate results</i> 58	
<i>Methods of questioning</i> 58	
<i>Analysis</i> 60	
<i>Examples of analysis</i> 62	
<i>Protocol analysis</i> 66	
<i>Other methods</i> 66	
<i>Debugging</i> 68	
<i>Summary</i> 69	
Chapter 6: Reasoning and probability theory	71
<i>The foundations of probability</i> 72	
<i>Combination of events</i> 74	
<i>Probability distributions</i> 76	
<i>Statistical tests</i> 80	
<i>Correlation</i> 82	
<i>Bayes theorem</i> 83	
<i>Problems of estimation</i> 85	
<i>Summary</i> 86	
Chapter 7: Fuzziness in reasoning	89
<i>Usage of words</i> 89	
<i>Fuzziness</i> 90	
<i>IF... THEN rules</i> 91	
<i>Examples</i> 93	
<i>Symptoms</i> 93	
<i>Weak rules</i> 96	
<i>Incompatibility</i> 97	
<i>Analogies</i> 99	
<i>Uncertainty in data</i> 99	
<i>Endorsements</i> 101	
<i>Fuzzy logic</i> 101	
<i>Fuzzy sets</i> 102	
<i>Applications of fuzzy logic</i> 105	
<i>Other forms of logic</i> 106	
<i>Summary</i> 108	
Chapter 8: Machine induction	109
<i>Principles of induction</i> 109	
<i>Requirements for induction</i> 110	
<i>ID3 rule induction</i> 114	
<i>A simple case study</i> 117	
<i>Results from taxonomy</i> 122	
<i>Problem with uncertain data</i> 124	
<i>General comments</i> 126	
<i>The structured approach</i> 130	
<i>Summary</i> 130	

Chapter 9: The repertory grid	133
<i>Personal construct theory</i>	133
<i>The grid</i>	134
<i>Grid elicitation</i>	137
<i>Grid analysis</i>	138
<i>A case study in repertory grid</i>	138
<i>Using cluster analysis to focus the grid</i>	145
<i>The expert's reaction</i>	149
<i>The grid's usefulness</i>	149
<i>Summary</i>	152
Chapter 10: Try it anyway — two case studies	153
<i>Attersley Vegetable Research Station</i>	153
<i>Background</i>	153
<i>The user's view</i>	155
<i>Back to the expert</i>	155
<i>Knowledge acquisition</i>	157
<i>Problems</i>	157
<i>A reasonable system</i>	158
<i>Cotting Hospital</i>	159
<i>Initial reactions to expert systems</i>	159
<i>A probability model</i>	160
<i>Discussion of examples</i>	161
<i>Fuzzy induction</i>	161
<i>Doctor involvement</i>	162
<i>Enhancements</i>	162
<i>Overview</i>	163
<i>Finally ...</i>	164
<i>Bibliography and references</i>	165
<i>Glossary</i>	169
<i>Index</i>	177
