CONTENTS

Foreword	xiii
1 Introduction to Muscle Development	1
The cellular origins of myoblasts	1
The characteristics of myoblast lineages	4
Commitment to terminal differentiation	7
The formation of myotubes	9
2 Transcriptional Regulation of Gene Expression	13
The basic transcriptional apparatus	14
The myogenic family of transcriptional regulators	14
Myogenic regulators are basic helix-loop-helix (bHLH) proteins	16
The crystal structures of regulatory protein-DNA complexes	20
Requirement for transcriptional regulators during muscle development	20
Intermediate myogenic factors	26
Other regulators of cell proliferation and differentiation	29
Regulation of the activity of early genes by growth factors	33
Regulation of transcriptional factor activity by phosphorylation	37
The effect of innervation and muscle activity	38
The effect of thyroid hormones	39
3 The Development of Sarcoplasmic Reticulum in Skeletal Muscle and the Expression of Ca²⁺-ATPase	45
Introduction	45
The structure of developing sarcoplasmic reticulum	48
Regulatory elements in the genes of sarcoplasmic reticulum Ca ²⁺ -ATPase. Processing of mRNA	66
Targeting of Ca ²⁺ -ATPase to the sarco/endoplasmic reticulum (SR-ER)	89
4 The Synthesis and Insertion of Luminal Sarcoplasmic Reticulum Proteins during Development of Skeletal Muscle	107
General background	107
Calsequestrin	110

Calreticulin	115
The 53 kDA and 160 kDA glycoproteins of sarcoplasmic reticulum	122
Calnexin	127
The histidine-rich Ca ²⁺ binding protein (HCP or HRC)	130
Phospholamban	135
The glucose-regulated proteins GRP78 (BiP) and GRP94	145
The quality control of endoplasmic reticulum	147
5 Regulation of Sarcoplasmic Reticulum Protein Composition and Turnover by Proteolysis	159
Introduction	159
The ATP-dependent ubiquitin-proteasome pathway	160
The Ca ²⁺ -dependent cystein proteases: calpain and its inhibitor calpastatin	166
Lysosomal proteases	173
6 Regulation of the Phospholipid Composition of Sarcoplasmic Reticulum during Development	175
Introduction	175
The phospholipid composition of sarcoplasmic reticulum in adult skeletal muscle	177
The major pathways of phospholipid synthesis in sarcoplasmic reticulum	185
Enzymes of inositol phospholipid metabolism	194
Phospholipases	198
Dolichol kinase	199
Lipid composition of skeletal muscle during development in vivo and in vitro	200
Enzymes of phospholipid biosynthesis in sarcoplasmic reticulum of developing muscle	202
The relationship between lipid composition, membrane dynamics, and the fusion of myoblasts into myotubes	208
Effect of phospholipases on developing muscle cells	211
The relationship between phospholipid biosynthesis and the synthesis of Ca ²⁺ -ATPase in sarcoplasmic reticulum	213
The relationship between membrane surface area and the expression of membrane proteins in non-muscle cells	216
Possible mechanisms of membrane expansion induced by the Ca ²⁺ -ATPase and other membrane proteins	221
Models of sarcoplasmic reticulum assembly	224

7	Development of Excitation-Contraction Coupling Apparatus	231
	Introduction	231
	The development of transverse tubules (T-system) in skeletal muscle	238
	The development of voltage-dependent Ca^{2+} release apparatus	243
8	The Expression of Dihydropyridine Receptor Ca^{2+} Channel (DHPR) during Muscle Development	249
	Introduction	249
	The structure of DHPR complex	250
	The structure of the DHPR seen by electron microscopy	265
	Developmental changes in Ca^{2+} channel activity of DHPR in mammalian skeletal muscle	267
	Regulation of the expression of DHPR in mammalian skeletal muscle during development	271
	Expression of DHPR in chicken skeletal muscle during development	273
	Targeting of the DHPR subunits to the triad junctions in dysgenic mouse muscle	275
	Effect of dysgenesis mutation on the developmental program of skeletal muscle	277
	Hypokalaemic periodic paralysis	279
	Evolution of E-C coupling	279
9	The Ryanodine Receptor Ca^{2+} Channel (RyR)	281
	Introduction	281
	The distribution, gene structure, and alternative splicing of RyR isoforms	281
	Functional sites in the ryanodine receptor Ca^{2+} channels	291
	Functional changes in ryanodine receptors in malignant hyperthermia	296
	The expression of ryanodine receptor during development	297
10	The Role of Ca^{2+} in the Regulation of the Expression of Ca^{2+}-ATPase in Muscle and Non-muscle Cells	305
	Introduction	305
	The effect of extracellular Ca^{2+} concentration on muscle development and on the Ca^{2+} -ATPase content of sarcoplasmic reticulum	306
	Cytoplasmic free Ca^{2+} concentration in developing muscle cells	313
	The effect of Ca^{2+} ionophores on the synthesis of Ca^{2+} -ATPase	314

The effect of the Ca ²⁺ -ATPase inhibitor thapsigargin on the synthesis of Ca ²⁺ -ATPase	319
Coordinated regulation by Ca ²⁺ of the expression of the plasma membrane and sarco/endoplasmic reticulum Ca ²⁺ pumps	326
11 The Role of Ca²⁺ in the Expression of the Endoplasmic Reticulum Chaperon Proteins GRP78 (BiP) and GRP94	329
Introduction	329
Early observations on the effect of Ca ²⁺ ionophores on the expression of GRP78 and GRP94 in cultured muscle and non-muscle cells	330
The effects of heat shock, glucose deprivation, and amino acid analogues on protein synthesis in cultured muscle cells	335
Mechanisms of induction of GRP78 and GRP94 genes	335
Ca ²⁺ sensitive regulatory elements in the genes of GRP78 and GRP94	339
The role of protein phosphokinases in the Ca ²⁺ -induced expression of grp genes	343
12 Transcriptional Regulation of c-fos Gene	345
The structure of c-fos gene	345
The regulation of c-fos gene activity by calcium	347
Effect of Ca ²⁺ on transcriptional elongation	349
The relationship between c-fos and myogenic bHLH proteins	349
13 Regulation of the Expression of Acetylcholine Receptor (AChR) in Muscle by Electrical Activity and Ca²⁺	351
The structure of AchR	351
The influence of muscle activity on AchR expression	351
The involvement of Ca ²⁺ and protein kinase C in the regulation of AchR gene expression	357
Regulation of AchR gene expression by cAMP	358
Regulation of AchR expression through the Ca ²⁺ -calmodulin pathway	359
Regulation of myogenic factors by the electrical activity in muscle cells	360
The role of Ca ²⁺ in the expression of acetylcholinesterase (AChE)	361
14 Effects of Calcium and Calcium Ionophores and Channel Blockers on the Synthesis of Other Muscle Proteins	363
Myosin	363
ATP: Creatine phosphotransferase	363

15 The Regulation of the Expression of Na⁺, K⁺-ATPase by Na⁺, K⁺, and Ca²⁺	365
Introduction	365
The functional demand on Na ⁺ , K ⁺ -ATPase	365
The relationship of Na ⁺ , K ⁺ -ATPase content to cytoplasmic Na ⁺ concentration	366
The effect of cytoplasmic [Ca ²⁺] on the synthesis of Na ⁺ , K ⁺ -ATPase	368
Promoter and enhancer elements in the Na ⁺ , K ⁺ -ATPase gene	371
16 Regulation of Prolactin Synthesis by Calcium	373
The prolactin gene	373
The effect of Ca ²⁺ on the expression of prolactin gene	374
Posttranslational regulation of prolactin expression by calcium	375
17 Regulation of the Expression of Metallothionein (MT)	377
The synthesis of metallothionein	377
The structure of metallothionein genes	378
The role of trans-acting factors in metal-ion induction	379
Effect of Ca ²⁺ ionophore A23187 on the expression of zinc metallothionein	380
Regulation of metallothionein expression by the heat shock transcription factor	380
Tissue specificity of induction	381
18 The Role of Calcium in Signal Transduction between the Cytoplasm and Nuclei. Excitation-Transcription Coupling	383
Introduction	383
The subcompartments in sarco/endoplasmic reticulum	385
Ca ²⁺ channels in the plasma membrane	390
The selective decoding of Ca ²⁺ signals based on their spatio-temporal characteristics	393
Regulation of Ca ²⁺ concentration in the nuclei	402
The structure of nuclear pore complex (NPC)	406
Ca ²⁺ transport ATPases in the nuclear envelope	408
The phosphatidylinositol cycle in the nucleus and its potential significance in nuclear Ca ²⁺ signaling	409
Protein kinase C, a signal transducer within the nucleus	411
Inositol phosphate-sensitive and cyclic ADP ribose-sensitive Ca ²⁺ -channels in the nuclear envelope	415
Ca ²⁺ -binding proteins, Ca ²⁺ calmodulin-dependent protein kinases and protein phosphatases in nuclei	417
References	425
Index	609
