

# Urban Ecosystems

## Ecological Principles for the Built Environment

FREDERICK R. ADLER

Department of Mathematics and Department of Biology, University of Utah

COLBY J. TANNER

Department of Ecology and Evolution, University of Lausanne

# Contents

	<i>Preface</i>	<i>page vii</i>
<b>1</b>	<b>Urban ecosystems and the science of ecology</b>	<b>1</b>
	1.1 Engineered ecosystems	2
	1.2 Urban habitats	4
	1.3 Urban organisms	16
	1.4 The science of ecology	23
	1.5 What makes urban ecosystems different?	30
	1.6 The goals of urban ecology	33
	1.7 Questions and readings	35
<b>2</b>	<b>Urban accounting: metabolism, energy, and the ecological footprint</b>	<b>39</b>
	2.1 The urban metabolism	41
	2.2 Urban energy budgets	48
	2.3 The urban ecological footprint	55
	2.4 Comparison with other social organisms	62
	2.5 Questions and readings	68
<b>3</b>	<b>Urban ecosystem processes</b>	<b>74</b>
	3.1 Urban climate	76
	3.2 The urban water cycle	91
	3.3 Urban nutrient dynamics	102
	3.4 Urban ecological amplification and its consequences	122
	3.5 Questions and readings	132
<b>4</b>	<b>The ecology of urban organisms</b>	<b>139</b>
	4.1 Urban biodiversity	140
	4.2 Invasive species and biotic homogenization	161
	4.3 Species interactions in urban environments	175
	4.4 Urban infectious diseases	191
	4.5 Traits of urban organisms	202
	4.6 Urban evolution	231
	4.7 Questions and readings	240

<b>5</b>	<b>Implications of urban ecology</b>	253
5.1	Human health and disease	253
5.2	Ecological principles and urban policy	265
5.3	Cities and the future	281
5.4	Questions and readings	284
	<i>Glossary</i>	291
	<i>References</i>	303
	<i>Index of organisms</i>	336
	<i>Subject index</i>	339
